1. AAA

aaa authentication

Syntax	**aaa authentication** (**login** | **enable**) (**default** | *LISTNAME*) *METHODLIST* [*METHODLIST*] [*METHODLIST*] [*METHODLIST*] **no aaa authentication** (**login** | **enable**) *LISTNAME*

Parameter		
	login	Add/Edit login authentication list
	enable	Add/Edit enable authentication list

Default

Default authentication list name for type login is “default” and default method is “local”.
Default authentication list name for type enable is “default” and default method is “enable”

Mode

Global Configuration

Usage

Login authentication is used when user try to login into the switch. Such as CLI login dialog and WEBUI login web page.
Enable authentication is used only on CLI for user trying to switch from User EXEC mode to Privileged EXEC mode.

Both of them support following authenticate methods.
Local: Use local user account database to authenticate. (This method is not supported for enable authentication)
Enable: Use local enable password database to authenticate.
Tacacs+: Use remote Tacas+ server to authenticate.
Radius: Use remote Radius server to authenticate.
None: Do nothing and just make user to be authenticated.

Each list allows you to combine these methods with different orders. For example, we want to authenticate login user with remote Tacacs+ server, but server may be crashed. Therefore, we need a backup plan, such as another Radius server. So we can configure the list with Tacacs+ server as first authentication method and Radius server as second one.

Use no form to delete the existing list. However, “default” list is not allowed to remove.

Example

This example shows how to add a login authentication list to authenticate with order tacacs+, radius, local.

```
Switch(config)# aaa authentication login test1
tacacs+ radius local
```

This example shows how to show existing login authentication lists

```
Switch# show aaa authentication login lists
Login List Name   | Authentication Method List
------------------+------------------------------
                default     tacacs+         tacacs+  radius  local
```

This example shows how to add an enable authentication list to authenticate with order tacacs+, radius, enable.

```
Switch(config)# aaa authentication enable test2
tacacs+ radius enable
```

This example shows how to show existing enable authentication lists

```
Switch# show aaa authentication enable lists
Enable List Name | Authentication Method List
-----------------+------------------------------
          default   | enable
            test2   | tacacs+   radius   enable
```

login authentication

Syntax

login authentication *LISTNAME*
no login authentication

Parameter

LISTNAME	Auth Method List Name.
default	Default Auth Method List

Default

Default login authentication list for each line is “default”.

Mode

Line Configuration

Usage

Different access methods are allowed to bind different login authentication lists. Use “**login authentication**” command to bind the list to specific line (console, telnet, ssh).

Use no form to bind the “default” list back.

Example

This example shows how to create a new login authentication list and bind to telnet line.

```
Switch(config)# aaa authentication login test1
```

```
tacacs+ radius local
Switch(config)# line telnet
Switch(config-line)# login authentication test1
```

This example shows how to show line binding lists.

```
Switch# show line lists
  Line Type    |     AAA Type       |  List Name
-------------+-----------------+----------------
     console   |            login    | default
               |           enable    | default
      telnet   |            login    | test1
               |           enable    | default
         ssh   |            login    | default
               |           enable    | default
        http   |           login    | default
       https   |           login    | default
```

ip http login authentication

Syntax

ip (http | https) login authentication *LISTNAME*
no ip (http | https) login authentication

http	Bind login authentication list to user access WEBUI with http protocol
https	Bind login authentication list to user access WEBUI with https protocol
LISTNAME	Specify the login authentication list name to use.

Default

Default login authentication list for each line is “default”.

Mode

Global Configuration

Usage

Different access methods are allowed to bind different login authentication lists. Use “**ip (http | https) login authentication**” command to bind the list to WEBUI access from http or https.

Use no form to bind the “default” list back.

Example

This example shows how to create two new login authentication lists and bind to http and https.

```
Switch(config)# aaa authentication login test1
tacacs+ radius local
Switch(config)# aaa authentication login test2
```

```
radius local
Switch(config)# ip http login authentication test1
Switch(config)# ip https login authentication test2
```

This example shows how to show line binding lists.

```
Switch# show line lists
  Line Type   |    AAA Type      |  List Name
--------------+------------------+-----------------
     console  |           login  | default
              |          enable  | default
      telnet  |           login  | default
              |          enable  | default
         ssh  |           login  | default
              |          enable  | default
        http  |           login  | test1
       https  |           login  | test2
```

enable authentication

Syntax

enable authentication *LISTNAME*
no enable authentication

Parameter

LISTNAME	Auth Method List Name.
default	Default Auth Method List

Default

Default enable authentication list for each line is “default”.

Mode

Line Configuration

Usage

Different access methods are allowed to bind different enable authentication lists. Use “**enable authentication**” command to bind the list to specific line (console, telnet, ssh).

Use no form to bind the “default” list back.

Example

This example shows how to create a new enable authentication list and bind to telnet line.

```
Switch(config)# aaa authentication enable test1
tacacs+ radius enable
Switch(config)# line telnet
Switch(config-line)# enable authentication test1
```

This example shows how to show line binding lists.

```
Switch# show line lists
  Line Type   |    AAA Type      |  List Name
```

```
-------------+-----------------+----------------
     console  |           login   | default
              |           enable   | default
      telnet  |           login   | default
              |           enable   | test1
         ssh  |           login   | default
              |           enable   | default
        http |           login   | default
       https |           login   | default
```

show aaa authentication

Syntax

show aaa authentication (login | enable) lists

Parameter

login	Show login authentication list
enable	Show enable authentication list

Default

No default value for this command

Mode

Privileged EXEC

Usage

Use "**show aaa authentication**" command to show login authentication or enable authentication method lists.

Example

This example shows how to show existing login authentication lists

```
Switch# show aaa authentication login lists
Login List Name   | Authentication Method List
-----------------+-------------------------------
          default  | local
            test1  | tacacs+  radius  local
```

This example shows how to show existing enable authentication lists

```
Switch# show aaa authentication login lists
Enable List Name | Authentication Method List
-----------------+-------------------------------
          default  | enable
            test2  | tacacs+  radius  enable
```

show line lists

Syntax	**show line lists**
Parameter	
Default	No default value for this command
Mode	Privileged EXEC
Usage	Use "**show line lists**" command to show all lines' binding list of all authentication, authorization, and accounting function.

Example

This example shows how to show line binding lists.

```
Switch# show line lists
  Line Type    |     AAA Type       |  List Name
-------------+-----------------+-----------------
     console  |            login    | default
              |           enable    | default
              |             exec    | default
              |         commands    | default
              | accounting-exec | default
      telnet  |            login    | default
              |           enable    | default
              |             exec    | default
              |         commands    | default
              | accounting-exec | default
         ssh  |            login    | default
              |           enable    | default
              |             exec    | default
              |         commands    | default
             | accounting-exec | default
       http |            login    | default
      https |            login    | default
```

tacacs default-config

Syntax	**tacacs default-config** [**key** *TACACSKEY*] [**timeout** <*1-30*>]

Parameter

key	TACACS+ key
timeout	TACACS+ timeout

Default

Default tacacs+ key is "".
Default tacacs+ timeout is 5 seconds.

Mode

Global Configuration

Usage

Use "**tacacs default-config**" command to modify default values of tacacs+ server. These default values will be used when user try to create a new tacacs+ server and not assigned these values.

Example

This example shows how modify default tacacs+ configuration

```
Switch(config)# tacacs default-config timeout 20
Switch(config)# tacacs default-config key tackey
```

This example shows how to show default tacacs+ configurations.

```
Switch# show tacacs default-config
Timeout |     Key
--------+---------
20    |        tackey
```

This example shows how to create a new tacacs+ server with above default config and show results.

```
Switch(config)# tacacs host 192.168.1.111
Switch# show tacacs
Prio | Timeout |       IP Address      |        Port     | Key
------+---------+-------------------+--------+-------
---
1 |    20       |        192.168.1.111 |        49 | tackey
```

tacacs host

Syntax

tacacs host *HOSTNAME* [**port** *<0-65535>*] [**key** *TACPLUSKEY*] [**priority** *<0-65535>*] [**timeout** *<1-30>*]
no tacacs [**host** *HOSTNAME*]

Parameter

host	Host name
port *<0-65535>*	TCP/UDP port
key	TACACS+ key
priority *<0-65535>*	Server priority
timeout *<1-30>*	TACACS+ timeout

Default

Default tacacs+ key is "".
Default tacacs+ timeout is 5 seconds.

Mode Global Configuration

Usage Use "**tacacs host**" command to add or edit tacacs+ server for authentication, authorization or accounting.

Use no form to delete one or all tacacs+ servers from database.

Example This example shows how to create a new tacacs+ server

```
Switch(config)# tacacs host 192.168.1.111 port 12345
 key tacacs+ priority 100 timeout 10
```

This example shows how to show existing tacacs+ server.

```
Switch# show tacacs
Prio  | Timeout |      IP Address      |        Port     | Key
------+---------+----------------------+---------+-------
---
100 | 10       |        192.168.1.111 |        12345 |
 tacacs+
```

show tacacs default-config

Syntax **show tacacs default-config**

Parameter

Default No default value for this command

Mode Privileged EXEC

Usage Use "**show tacacs default-config**" command to show tacacs+ default configurations.

Example This example shows how to show default tacacs+ configurations.

```
Switch# show tacacs default-config
Timeout |     Key
--------+---------
20    |        tackey
```

show tacacs

Syntax	**show tacacs**
Parameter	
Default	No default value for this command
Mode	Privileged EXEC
Usage	Use "**show tacacs**" command to show existing tacacs+ servers.

Example	This example shows how to show existing tacacs+ server.
	`Switch# show tacacs`
	Prio | Timeout | IP Address | Port | Key
	`------+---------+-----------------+--------+-------`
	`---`
	100 | 10 | 192.168.1.111 | 12345 |
	tacacs+

show default-config

Syntax	**radius default-config** [**key** *RADIUSKEY*] [**retransmit** *<1-10>*] [**timeout** *<1-30>*]
Parameter	**key** RADIUS key **retransmit** Specify the number of retransmit to active server **timeout** Specify default radius server timeout value
Default	Default radius key is "". Default radius retransmit is 3 times. Default radius timeout is 3 seconds.
Mode	Global Configuration
Usage	Use "**radius default-config**" command to modify default values of radius server. These default values will be used when user try to create a new radius server and not assigned these values.

Example	This example shows how modify default radius configuration
	`Switch(config)# radius default-config timeout 20`
	`Switch(config)# radius default-config key radiuskey`
	`Switch(config)# radius default-config retransmit 5`
	This example shows how to show default radius configurations.

```
Switch# show radius default-config
Retries| Timeout|     Key
--------+--------+---------
5      |        20      | radiuskey
```

This example shows how to create a new radius server with above default config and show results.

```
Switch(config)# radius host 192.168.1.111
Switch# show radius
Prio | IP Address              | Auth-Port| Retries| Timeout| Usage-Type|    Key
------+-----------------+----------+--------+-------
-+-----------+---------
1      |        192.168.1.111 |        1812|   5    |20          |         All      | radiuskey
```

radius host

Syntax

radius host *HOSTNAME* [**auth-port** *<0-65535>*] [**key** *RADIUSKEY*] [**priority** *<0-65535>*] [**retransmit** <1-10>] [**timeout** *<1-30>*] [**type** (login|802.1x|all)]
no radius [**host** *HOSTNAME*]

Parameter

host *HOSTNAME*	Specify radius server host name, both IP address and domain name are available.
auth-port *<0-65535>*	UDP port for RADIUS authentication server (default is 1812)
key *RADIUSKEY*	RADIUS key

priority *<0-65535>*	Server priority
retransmit *<1-10>*	Specify the number of retransmit to active server
timeout	Time to wait for this RADIUS server to reply(default is 3)
type	Usage type of this server
802.1X	
login	Usage type (login, 802.1X, all)
all	

Default

Default radius key is "".
Default radius timeout is 3 seconds.

Mode

Global Configuration

Usage

Use "**radius host**" command to add or edit an existing radius server.

Use no form to delete one or all radius servers from database.

Example

This example shows how to create a new radius server
Switch(config)# **radius host 192.168.1.111 auth-port 12345 key radiuskey priority 100 retransmit 5 timeout 10 type all**

This example shows how to show existing radius server.

```
Switch# show radius
Prio | IP Address      | Auth-Port| Retries| Timeout| Usage-Type|   Key
-----+----------------+----------+--------+--------
+-----------+---------
100 |          192.168.1.111 |          12345        |       5        |        10
|          All   |radiuskey
```

show radius default-config

Syntax

show radius default-config

Parameter

Default

No default value for this command

Mode

Privileged EXEC

Usage	Use "**show radius default-config**" command to show radius default configurations.
Example	This example shows how to show default radius configurations. Switch# show radius default-config Retries| Timeout| Key -------+--------+--------- 5 | 20 | radiuskey

show radius

Syntax	**show radius**
Parameter	
Default	No default value for this command
Mode	Privileged EXEC
Usage	Use "**show radius**" command to show existing radius servers.
Example	This example shows how to show existing radius server. Switch# **show radius** Prio | IP Address | Auth-Port| Retries| Timeout| Usage-Type| Key -----+---------------+---------+--------+--------+--------- +----------+--------- 100 |192.168.1.111 | 12345 | 5 | 10| All |radiuskey

2. ACL

mac acl

Syntax	**mac acl NAME** **no mac acl NAME**
Parameter	NAME Specify the name of MAC ACL
Default	No default is defined

Mode	Global Configuration
Usage	Use the **mac acl** command to create a MAC access list and to enter mac-acl configuration mode. The name of ACL must be unique that can not have same name with other ACL or QoS policy. Once an ACL is created, an implicit "deny any" ACE created at the end of the ACL. That is, if there are no matches, the packets are denied. Use the no form of this command to delete.
Example	The example shows how to create a mac acl. You can verify settings by the following **show acl** command Switch(config)# **mac acl test** Switch(config-mac-al)# **show acl** MAC access list test

permit (MAC)

Syntax	**[sequence <1-2147483647>] permit (A:B:C:D:E:F/A:B:C:D:E:F|any) (A:B:C:D:E:F/A:B:C:D:E:F|any) [vlan <1-4094>] [cos <0-7> <0-7>] [ethtype <0x0600-0xFFFF>]** **no sequence <1-2147483647>**

Parameter		
	<1-2147483647>	(Optional) Specify sequence index of ACE, the sequence index represent the priority of an ACE in ACL.
	(A:B:C:D:E:F/A:B:C:D:E:F|any)	Specify the source MAC address and mask of packet or any MAC address.
	(A:B:C:D:E:F/A:B:C:D:E:F|any)	Specify the destination MAC address and mask of packet or any MAC address
	[vlan <1-4094>]	(Optional) Specify the vlan ID of packet.
	[cos <0-7> <0-7>]	(Optional) Specify the Class of Service value and mask of packet.
	[ethtype <0x0600-0xFFFF>]	(Optional) Specify Ethernet protocol number of packet

Default	No default is defined.
Mode	MAC ACL Configuration
Usage	Use the permit command to add permit conditions for a mac ACE that bypass those packets hit the ACE. The "**sequence**" also represents hit priority when ACL bind to an interface. An ACE not specifies "**sequence**" index would assign a sequence index which is the largest existed index plus 20. If packet content can match more than one ACE, the lowest sequence ACE is hit. An ACE can not be added if has the same conditions as existed ACE.
Example	The example shows how to add an ACE that permit packets with source

MAC address 22:33:44:55:66:77 、 VLAN 3 and Ethernet type 1999. You can
verify settings by the following **show acl** command

Switch(config)# **mac acl test**
Switch(config-mac-al)# **sequence 999 permit 22:33:44:55:66:77/FF:FF:FF:FF:FF:FF any vlan 3 ethtype 0x2800**
Switch(config-mac-al)# **show acl**
MAC access list test
sequence 999 permit 22:33:44:55:66:77/FF:FF:FF:FF:FF:FF any vlan 3 ethtype 0x2800

deny (MAC)

Syntax

[sequence <1-2147483647>] deny (A:B:C:D:E:F/A:B:C:D:E:F|any) (A:B:C:D:E:F/A:B:C:D:E:F|any) [vlan <1-4094>] [cos <0-7> <0-7>] [ethtype <0x0600-0xFFFF>] [shutdown]
no sequence <1-2147483647>

Parameter

<1-2147483647>	(Optional) Specify sequence index of ACE, the sequence index represent the priority of an ACE in ACL.
(A:B:C:D:E:F/A:B:C:D:E:F|any)	Specify the source MAC address and mask of packet or any MAC address.
(A:B:C:D:E:F/A:B:C:D:E:F|any)	Specify the destination MAC address and mask of packet or any MAC address.
[vlan <1-4094>]	(Optional) Specify the vlan ID of packet.
[cos <0-7> <0-7>]	(Optional) Specify the Class of Service value and mask of packet.
[ethtype <0x0600-0xFFFF>]	(Optional) Specify Ethernet protocol number of packet
[shutdown]	(Optional) Shutdown interface while ACE hit

Default

No default is defined.

Mode

MAC ACL Configuration

Usage

Use the deny command to add deny conditions for a mac ACE that drop those packets hit the ACE. The "**sequence**" also represents hit priority when ACL bind to an interface. An ACE not specifies "**sequence**" index would assign a sequence index which is the largest existed index plus 20. If packet content can match more than one ACE, the lowest sequence ACE is hit. An ACE

cannot be added if has the same conditions as existed ACE. Use "**shutdown**" to shutdown interface while ACE hit.

Example

The example shows how to add an ACE that denies packets with destination MAC address aa:bb:cc:xx:xx:xx and VLAN 9. You can verify settings by the following **show acl** command

```
Switch(config)# mac acl test
Switch(config-mac-al)# sequence 30 permit any any
Switch(config-mac-al)# deny any aa:bb:cc:00:0:00/FF:FF:FF:00:00:00
vlan 9 shutdown
Switch(config-mac-al)# show acl
MAC access list test
   sequence 30 permit any any
   sequence 50 deny any AA:BB:CC:00:00:00/FF:FF:FF:00:00:00 vlan 9
shutdown
```

ip acl

Syntax

ip acl NAME
no ip acl NAME

Parameter

NAME	Specify the name of IPv4 ACL

Default

No default is defined

Mode

Global Configuration

Usage

Use the **ip acl** command to create an IPv4 access list and to enter ip-acl configuration mode. The name of ACL must be unique that can not have same name with other ACL or QoS policy. Once an ACL is created, an implicit "deny any" ACE created at the end of the ACL. That is, if there are no matches, the packets are denied. Use the no form of this command to delete.

Example

The example shows how to create an IP ACL. You can verify settings by the following **show acl** command

Switch(config)#**ip acl iptest**
Switch(config-ip-al)# **show acl**
IP access list iptest

permit (IP)

Syntax

[sequence <1-2147483647>] permit (<0-255>|ipinip|egp|igp|hmp|rdp|ipv6|ipv6:rout|ipv6:frag|rsvp|ipv6:icmp|ospf|pim|l2tp|ip) (A.B.C.D/A.B.C.D|any) (A.B.C.D/A.B.C.D|any) [(dscp|precedence) VALUE]]

[sequence <1-2147483647>] permit icmp (A.B.C.D/A.B.C.D|any) (A.B.C.D/A.B.C.D|any) (<0-255>|echo-reply|destination-unreachable|source-quench|echo-request|router-advertisement|router-solicitation|time-exceeded|timestamp| timestamp-reply|traceroute|any) (<0-255>|any) [(dscp|precedence) VALUE]

[sequence <1-2147483647>] permit tcp (A.B.C.D/A.B.C.D|any) (<0-65535>|echo|discard|daytime|ftp-data|ftp|telnet|smtp|time|hostname|whois|tacacs-ds|domain|www|pop2|pop3|syslog|talk|klogin|kshell|sunrpc|drip|PORT_RANGE|any) (A.B.C.D/A.B.C.D|any) (<0-

65535>|echo|discard|daytime|ftp-data|ftp|telnet|smtp|time|hostname|whois|tacacs-ds|domain|www|pop2|pop3|syslog|talk|klogin|kshell|sunrpc|drip|PORT_RANGE|any)
[match-all TCP_FLAG] [(dscp|precedence) VALUE]

[sequence <1-2147483647>] permit udp (A.B.C.D/A.B.C.D|any) (<0-65535>|echo|discard|time|nameserver|tacacs-ds|domain|bootps|bootpc|tftp|sunrpc|ntp|netbios-ns|snmp|snmptrap|who|syslog|talk|rip|PORT_RANGE|any) (A.B.C.D/A.B.C.D|any) (<0-65535>|echo|discard|time|nameserver|tacacs-ds|domain|bootps|bootpc|tftp|sunrpc|ntp|netbios-ns|snmp|snmptrap|who|syslog|PORT_RANGE|any) [(dscp|precedence) VALUE]

no sequence <1-2147483647>

Parameter

<0-255>	Specify the IP protocol number.
egp	Exterior Gateway Protocol (8).
hmp	Host Monitoring Protocol (20).
icmp	Internet Control Message Protocol (1).
igp	interior Gateway Protocol (9).
ipinip	IP in IP (encapsulation) Protocol (4).
l2tp	Layer Two Tunneling Protocol (115).
ospf	Open Shortest Path Protocol (89).
pim	Protocol Independent Multicast (103).
rdp	reliable Data Protocol (27).
rsvp	reservation Protocol (46).
tcp	transmission Control Protocol (6).
udp	user Datagram Protocol (17).

Default

No default is defined.

Mode

IP ACL Configuration

Usage

Use the permit command to add permit conditions for an IP ACE that bypasses those packets hit the ACE. The "**sequence**" also represents hit priority when ACL bind to an interface. An ACE not specifies "**sequence**" index would assign a sequence index which is the largest existed index plus 20. If packet content can match more than one ACE, the lowest sequence ACE is hit. An ACE can not be added if has the same conditions as existed ACE.

Example

The example shows how to add a set of ACEs. You can verify settings by the following **show acl** command.
This command shows how to permit a source IP address subnet.

Switch(config-ip-al)# **permit ip 192.168.1.0/255.255.255.0 192.168.1.111/255.255.255.0**
This command shows how to permit ICMP echo-request packet with any IP address.
Switch(config-ip-al)# **permit icmp any any echo-request any**
This command shows how to permit any IP address HTTP packets with DSCP 5.
Switch(config-ip-al)# **permit tcp any any any www dscp 5**
This command shows how to permit any source IP address SNMP packet connect to destination IP address 192.168.1.1.
Switch(config-ip-al)# **permit udp any any 192.168.1.1/255.255.255.255 snmp**
Switch(config-ip-al)# **show acl**
IP access list iptest
sequence 1 permit ip 192.168.1.0/255.255.255.0 any
sequence 21 permit icmp any any echo-request any
sequence 41 permit tcp any any any www dscp 5
sequence 61 permit udp any any 192.168.1.1/255.255.255.255 snmp

deny (IP)

Syntax

[sequence <1-2147483647>] deny (<0-255>|ipinip|egp|igp|hmp|rdp|ipv6|ipv6:rout|ipv6:frag|rsvp|ipv6:icmp|ospf|pim|l2tp|ip) (A.B.C.D/A.B.C.D|any) (A.B.C.D/A.B.C.D|any) [(dscp|precedence) VALUE]] [shutdown]

[sequence <1-2147483647>] deny icmp (A.B.C.D/A.B.C.D|any) (A.B.C.D/A.B.C.D|any) (<0-255>|echo-reply|destination-unreachable|source-quench|echo-request|router-advertisement|router-solicitation|time-exceeded|timestamp| timestamp-reply|traceroute|any) (<0-255>|any) [(dscp|precedence) VALUE] [shutdown]

[sequence <1-2147483647>] deny tcp (A.B.C.D/A.B.C.D|any) (<0-65535>|echo|discard|daytime|ftp-data|ftp|telnet|smtp|time|hostname|whois|tacacs-ds|domain|www|pop2|pop3|syslog|talk|klogin|kshell|sunrpc|drip|PORT_RANGE|any) (A.B.C.D/A.B.C.D|any) (<0-65535>|echo|discard|daytime|ftp-data|ftp|telnet|smtp|time|hostname|whois|tacacs-ds|domain|www|pop2|pop3|syslog|talk|klogin|kshell|sunrpc|drip|PORT_RANGE|any) [match-all TCP_FLAG] [(dscp|precedence) VALUE] [shutdown]

[sequence <1-2147483647>] deny udp (A.B.C.D/A.B.C.D|any) (<0-65535>|echo|discard|time|nameserver|tacacs-ds|domain|bootps| bootpc|tftp|sunrpc|ntp|netbios-ns|snmp|snmptrap|who|syslog| talk|rip|PORT_RANGE|any) (A.B.C.D/A.B.C.D|any) (<0-65535>|echo| discard|time|nameserver|tacacs-ds|domain|bootps|bootpc|tftp| sunrpc|ntp|netbios-ns|snmp|snmptrap|who|syslog|PORT_RANGE|any) [(dscp|precedence) VALUE] [shutdown]

no sequence <1-2147483647>

Parameter

<0-255>	Specify the IP protocol number.
egp	Exterior Gateway Protocol (8).
hmp	Host Monitoring Protocol (20).
icmp	Internet Control Message Protocol (1).
igp	interior Gateway Protocol (9).
ipinip	IP in IP (encapsulation) Protocol (4).
l2tp	Layer Two Tunneling Protocol (115).
ospf	Open Shortest Path Protocol (89).
pim	Protocol Independent Multicast (103).
rdp	Reliable Data Protocol (27).
rsvp	Reservation Protocol (46).
tcp	Transmission Control Protocol (6).
udp	User Datagram Protocol (17).

Default

No default is defined.

Mode

IP ACL Configuration

Usage

Use the deny command to add deny conditions for an IP ACE that drop those packets hit the ACE. The "**sequence**" also represents hit priority when ACL bind to an interface. An ACE not specifies "**sequence**" index would assign a sequence index which is the largest existed index plus 20. If packet content can match more than one ACE, the lowest sequence ACE is hit. An ACE can not be added if has the same conditions as existed ACE. Use "**shutdown**" to shutdown interface while ACE hit.

Example

The example shows how to add an ACE that denies packets with source IP address 192.168.1.80. You can verify settings by the following **show acl** command

```
Switch334455(config)# ip acl iptest
Switch334455(ip-al)# deny ip 192.168.1.80/255.255.255.255 any
Switch334455(ip-al)# show acl
IP access list iptest
   sequence 1 deny ip 192.168.1.80/255.255.255.255 any
```

ipv6 acl

Syntax

ipv6 acl NAME
no ipv6 acl NAME

Parameter

NAME	Specify the name of IPv6 ACL

Default

No default is defined

Mode

Global Configuration

Usage

Use the **ipv6 acl** command to create an IPv6 access list and to enter ipv6-acl configuration mode. The name of ACL must be unique that can not have same name with other ACL or QoS policy. Once an ACL is created, an implicit "deny any" ACE created at the end of the ACL. That is, if there are no matches, the packets are denied. Use the no form of this command to delete.

Example

The example shows how to create an IPv6 ACL. You can verify settings by the following **show acl** command

Switch334455(config)#**ipv6 acl ipv6test**
Switch334455(config-ipv6-al)# **show acl**
IPv6 access list iptest

permit (IPv6)

Syntax

[sequence <1-2147483647>] permit (<0-255>|ipv6) (X:X::X:X/<0-128>|any) (X:X::X:X/<0-128>|any) [(dscp|precedence) VALUE]

[(dscp|precedence) VALUE]

no sequence <1-2147483647>

Parameter

<1-2147483647>	(Optional) Specify sequence index of ACE, the sequence index represent the priority of an ACE in ACL.
(X:X::X:X/<0-128>|any)	Specify the source IPv6 address and prefix of packet or any IPv6 address.
(X:X::X:X/<0-128>|any)	Specify the destination IPv6 address and prefix of packet or any IPv6 address.
[dscp VALUE]	(Optional) Specify the DSCP of packet.
[precedence VLAUE]	(Optional) Specify the IP precedence of packet.
icmp-type	Specify ICMP message type for filtering ICMP packet. Enter a type name of list or a number of ICMP message type.
icmp-code	Specify ICMP message code for filtering ICMP packet.
l4-source-port	Specify TCP/UDP source port of for filtering TCP/UDP packet. Enter a port name of list or a number of TCP/UDP port.
l4-destination-port	Specify TCP/UDP destination port of for filtering TCP/UDP packet. Enter a port name of list or a number of TCP/UDP port.
match-all	Specify tcp flag for TCP packet. If a flag should be set it is prefixed by \"+\".If a flag should be unset it is prefixed by \"-\". Available options are +urg, +ack, +psh, +rst, +syn, +fin, -urg, -ack, -psh, -rst, -syn and -fin.To

	define more than 1 flag - enter additional flags one after another without a space (example +syn-ack).
Default	No default is defined.
Mode	IPv6 ACL Configuration
Usage	Use the permit command to add permit conditions for an IPv6 ACE that bypasses those packets hit the ACE. The "**sequence**" also represents hit priority when ACL bind to an interface. An ACE not specifies "**sequence**" index would assign a sequence index which is the largest existed index plus 20. If packet content can match more than one ACE, the lowest sequence ACE is hit. An ACE can not be added if has the same conditions as existed ACE.
Example	The example shows how to add a set of ACEs. You can verify settings by the following **show acl** command. This command shows how to permit a source IP address subnet. Switch334455(ipv6-al)# **permit permit ipv6 fe80:1122:3344:5566::1/64 any** Switch334455(ipv6-al)# **show acl** IPv6 access list ipv6test sequence 1 permit ipv6 fe80:1122:3344:5566::1/64 any

deny (IPv6)

Syntax	**[sequence <1-2147483647>] deny (<0-255>|ipv6) (X:X::X:X/<0-128>|any) (X:X::X:X/<0-128>|any) [(dscp|precedence) VALUE] [shutdown]** **[sequence <1-2147483647>] deny icmp (X:X::X:X/<0-128>|any) (X:X::X:X/<0-128>|any) (<0-255>|destination-unreachable|packet-too-big| time-exceeded|parameter-problem|echo-request|echo-reply| mld-query|mld-report|mldv2-report|mld-done| router-solicitation|router-advertisement|nd-ns|nd-na|any) (<0-255>|any)[(dscp|precedence) VALUE] [shutdown]** **[sequence <1-2147483647>] deny tcp (X:X::X:X/<0-128>|any) (<0-65535>|echo|discard|daytime|ftp-data|ftp|telnet|smtp| time|hostname|whois|tacacs-ds|domain|www|pop2|pop3|syslog| talk|klogin|kshell|sunrpc|drip|PORT_RANGE|any) (X:X::X:X/<0-128>|any) (<0-65535>|echo|discard|daytime|ftp-data|ftp|**

telnet|smtp|time|hostname|whois|tacacs-ds|domain|www|pop2|pop3|syslog|talk|klogin|kshell|sunrpc|drip|PORT_RANGE|any) [match-all TCP_FLAG] [(dscp|precedence) VALUE] [shutdown]

[sequence <1-2147483647>] deny udp (X:X::X:X/<0-128>|any) (<0-65535>|echo|discard|time|nameserver|tacacs-ds|domain|bootps|bootpc|tftp|sunrpc|ntp|netbios-ns|snmp|snmptrap|who|syslog|talk|rip|PORT_RANGE|any) (X:X::X:X/<0-128>|any) (<0-65535>|echo|discard|time|nameserver|tacacs-ds|domain|bootps|bootpc|tftp|sunrpc|ntp|netbios-ns|snmp|snmptrap|who|syslog|PORT_RANGE|any) [(dscp|precedence) VALUE] [shutdown]

no sequence <1-2147483647

Parameter

<0-255>	Specify the IPv6 protocol number.
icmp	Internet Control Message Protocol (1).
ipv6	Specify for any Internet Protocol.
tcp	Transmission Control Protocol (6).
udp	User Datagram Protocol (17).
[shutdown]	(Optional) Shutdown interface while ACE hit

Default

No default is defined.

Mode

IP ACL Configuration

Usage

Use the deny command to add deny conditions for an IPv6 ACE that drop those packets hit the ACE. The "**sequence**" also represents hit priority when ACL bind to an interface. An ACE not specifies "**sequence**" index would assign a sequence index which is the largest existed index plus 20. If packet content can match more than one ACE, the lowest sequence ACE is hit. An ACE can not be added if has the same conditions as existed ACE. Use "**shutdown**" to shutdown interface while ACE hit.

Example

The example shows how to add an ACE that denies packets with destination IP address fe80::abcd. You can verify settings by the following **show acl** command

```
Switch334455(config)# ipv6 acl ipv6test
Switch334455(ip-al)# deny ipv6 any fe80::abcd/128
Switch334455(ip-al)# show acl

IPv6 access list ipv6test
   sequence 1 deny ipv6 any fe80::abcd/128
```

bind acl

Syntax

(mac|ip|ipv6) acl NAME [no]
(mac|ip|ipv6) acl NAME

Parameter

(mac|ip|ipv6)	Specify a type of ACL to binding to interface
NAME	Specify the name of ACL

Default

No default is defined

Mode

Interface Configuration

Usage

Use the **(mac|ip|ipv6) acl NAME** command to bind an ACL to interfaces. An interface can bind only one ACL or QoS policy. Use the **no** form of this command to return to unbind an ACL from interface.

Example

The example shows how to bind an existed ACL to interface.

switch(config)# **interface GigabitEthernet 2**
switch(config-if)# **mac acl test**
switch(config-if)# **do show running-config interfaces GigabitEthernet 2**
interface gi2
 mac acl test

show acl

Syntax

show acl
show (mac|ip|ipv6) acl
show (mac|ip|ipv6) acl NAME

Parameter

(mac|ip|ipv6)	Specify a type of ACL to show
NAME	Specify the name of ACL

Default

No default is defined

Mode

Global Configuration
Context Configuration

Usage

Use the **show acl** command to show created ACLs. You can specify mac、ip or ipv6 to show specific type ACL or specify unique name string to show ACL with the name.

Example	The example shows how to show all IP ACL. Switch# **show ip acl** IP access list iptest sequence 1 deny ip 192.168.1.80/255.255.255.255 any

show acl utilization

Syntax	**show acl utilization**
Parameter	None
Default	No default is defined
Mode	Global Configuration
Usage	Use the **show acl utilization** command to show the usage of PIE of ASIC. When an ACL bind to interface, it needs ASIC resource to help to filter packet. An ASIC has limited resource. This command help user to know the PIE usage of AISC.
Example	The example shows how to show utilization Switch(config)# do show acl utilization Type: sys usage: 128 Type: mac ACL usage: 128 Type: IPv4 ACL usage: 128 Type: IPv6 ACL usage: 128

3. Administration

configure

Syntax	**configure**
Parameter	
Default	No default value for this command.
Mode	Privileged EXEC

Usage	Use "**configure**" command to enter global configuration mode. In global configuration mode, the prompt will show as "**Switch(config)#**".

Example	This example shows how to enter global configuration mode.
	`Switch# configure`
	`Switch(config)#`

clear arp

Syntax	**clear arp** [*A.B.C.D*]

Parameter	*A.B.C.D*	Specify specific arp entry to clear.

Default	No default value for this command.
Mode	User EXEC Privileged EXEC
Usage	Use "**clear arp**" command to clear all or specific one arp entry.

Example	This example shows how to clear all arp entries. `Switch# clear arp`

clear service

Syntax	**clear** (**telnet** | **ssh**)

Parameter	**telnet**	Clear all telnet sessions.
	ssh	Clear all ssh sessions.

Default	No default value for this command.
Mode	Privileged EXEC
Usage	Use "**clear service**" command to kill all existing sessions for the select service.
Example	This example shows how to enable telnet service and show current telnet

service status.

```
Switch# clear line telnet
```

enable

Syntax

enable [*<1-15>*]
disable [*<1-14>*]

Parameter

<1-15>	Specify privileged level to enable
<1-14>	Specify privileged level to disable

Default

Default privilege level is 15 if no privilege level is specified on enable command.
Default privilege level is 1 if no privilege level is specified on disable command.

Mode

User EXEC

Usage

In User EXEC mode, user only allows to do a few actions. Most of commands are only available in privileged EXEC mode. Use "**enable**" command to enter the privileged mode to do more actions on switch.

In privileged EXEC mode, use "**exit**" command is able to go back to user EXEC mode with original user privilege level. If you need to go back to user EXEC mode with different privilege level, use "**disable**" command to specify the privilege level you need.

In privileged EXEC mode, the prompt will show "**Switch#**"

Example

This example shows how to enter privileged EXEC mode and show current privilege level.

```
Switch> enable
Switch# show privilege
Current CLI Username:
Current CLI Privilege: 15
```

This example show how to enter user EXEC mode with privilege 3.

```
Switch# disable 3
Switch> show privilege
Current CLI Username:
Current CLI Privilege: 3
```

end

Syntax

end

Parameter

Default	No default value for this command.
Mode	Privileged EXEC Global Configuration Interface Configuration Line Configuration .....
Usage	Use "**end**" command to return to privileged EXEC mode directly. Every mode except User EXEC mode has the "end" command.

Example	This example shows how to enter Interface Configuration mode and use end command to go back to privileged EXEC mode
	`Switch# configure`
	`Switch(config)#interface GigabitEtherne 1`
	`Switch(config-if)# end`
	`Switch#`

exit

Syntax	**exit**
Parameter	
Default	No default value for this command.
Mode	User EXEC Privileged EXEC Global Configuration Interface Configuration Line Configuration .....
Usage	In User EXEC mode, "**exit**" command will close current CLI session. In other modes, "**exit**" command will go to the parent mode. And every mode has the "exit" command.

Example	This example shows how to enter privileged EXEC mode and use exit command to go back to user EXEC mode.
	`Switch> enable`
	`Switch# exit`
	`Switch>`

history

Syntax

history *<1-256>*
no history

Parameter

<1-256>	Specify maximum CLI history entry number.

Default

Default maximum history entry number is 128.

Mode

Line Configuration

Usage

Use "**history**" command to specify the maximum commands history number for CLI running on console, telnet or ssh service. Every command input by user will record in history buffer. If all history commands exceed configured history number, older ones will be deleted from buffer.
Use "**no history**" to disable the history feature. And use "**show history**" to show all history commands.

Example

This example shows how to change console history number to 100, telnet history number to 150 and ssh history number to 200.

```
Switch(config)# line console
Switch(config-line)# history 100
Switch(config-line)# exit
Switch(config)# line telnet
Switch(config-line)# history 150
Switch(config-line)# exit
Switch(config)# line ssh
Switch(config-line)# history 200
Switch(config-line)# exit
```

This example shows how show line information.

```
Switch# show line
Console ==============================
    Session Timeout : 10 (minutes)
    History Count   : 100
    Password Retry  : 3
    Silent Time     : 0 (seconds)
Telnet ==============================
    Telnet Server   : disabled
    Session Timeout : 10 (minutes)
    History Count   : 150
    Password Retry  : 3
    Silent Time     : 0 (seconds)
SSH ==============================
    SSH Server      : disabled
    Session Timeout : 10 (minutes)
    History Count   : 200
    Password Retry  : 3
    Silent Time     : 0 (seconds)
```

This example shows how show history commands.

```
Switch# show history
Maximun History Count: 100
1.enable
2.configure
3.line console
4.exit
5.show history
6.line
7.exit
8.show history
9.configure
10.line
11.line console
12.exit
13.line console
14.history 100
15.exit
16.show history
17.exit
18.show history
```

hostname

Syntax	**hostname** *WORD*
Parameter	*WORD* Specify the hostname of the switch.
Default	Default name string is “Switch”.
Mode	Global Configuration
Usage	Use “**hostname**” command to modify hostname of the switch. The system name is also used to be CLI prompt.

Example	This example shows how to modify contact information
	`Switch(config)# hostname myname`
	`myname(config)#`

interface

Syntax	**interface** *IF_PORTS* **interface range** *IF_PORTS*
Parameter	*IF_PORTS* Specify the port to select. This parameter allows partial port name and ignore case. For Example: fa1

	FastEthernet3 Gigabit4 ..... If port range is specified, the list format is also available. For Example: gi1,3,5 gi2,gi1-3 .....
Default	No default value for this command.
Mode	Global Configuration
Usage	Some configurations are port based. In order to configure these configurations, we need to enter Interface Configuration mode to configure them. Use "**interface**" command to enter the Interface Configuration mode and select the port to be configured. In Interface Configuration mode, the prompt will show as "**Switch(config-if)#**"

Example	This example shows how to enter Interface Configuration mode
	`Switch# configure`
	`Switch(config)# interface GigabitEthernet 1`
	`Switch(config-if)#`

ip address

Syntax	**ip address** *A.B.C.D* [**mask** *A.B.C.D*]
Parameter	**address** *A.B.C.D* — Specify IPv4 address for switch **mask** *A.B.C.D* — Specify net mask address for switch
Default	Default IP address is 192.168.1.1 and default net mask is 255.255.255.0.
Mode	Global Configuration
Usage	Use "**ip address**" command to modify administration ipv4 address. This address is very important. When we try to use telnet, ssh, http, https, snmp… to connect to the switch, we need to use this ip address to access it.

Example

This example shows how to modify the ipv4 address of the switch.

```
Switch(config)# ip address 192.168.1.200 mask 255.255.255.0
```

This example shows how to show current ipv4 address of the switch.

```
Switch# show ip
IP Address: 192.168.1.200
Subnet Netmask: 255.255.255.0
Default Gateway: 192.168.1.254
```

ip default-gateway

Syntax

ip default-gateway *A.B.C.D*
no ip default-gateway

Parameter

A.B.C.D	Specify default gateway IPv4 address for switch

Default

Default IP address of default gateway is 192.168.1.254.

Mode

Global Configuration

Usage

Use "**ip default-gateway**" command to modify default gateway address. And use "**no ip default-gateway**" to restore default gateway address to factory default.

Example

This example shows how to modify the ipv4 address of the switch.

```
Switch(config)# ip default-gateway 192.168.1.100
```

This example shows how to show current ipv4 default gateway of the switch.

```
Switch# show ip
IP Address: 192.168.1.1
Subnet Netmask: 255.255.255.0
Default Gateway: 192.168.1.100
```

ip dhcp

Syntax

ip dhcp no
ip dhcp

Parameter

Default	Default DHCP client is disabled.
Mode	Global Configuration
Usage	Use "**ip dhcp**" command to enabled dhcp client to get IP address from remote DHCP server. Use "**no ip dhcp**" command to disabled dhcp client and use static ip address.

Example	This example shows how to enable dhcp client.
	`Switch(config)# ip dhcp`
	
	This example shows how to show current dhcp client state of the switch.
	`Switch# show ip dhcp`
	`DHCP Status : enabled`

ip dns

Syntax	**ip dns** *A.B.C.D* [*A.B.C.D*] **no ip dns** [*A.B.C.D*]
Parameter	*A.B.C.D* Specify the DNS server ip address.
Default	Default IP address of DNS server is 168.95.1.1 and 168.95.192.1.
Mode	Global Configuration
Usage	Use "**ip dns**" command to modify DNS server address. And use "**no ip dns**" to delete existing DNS server.
Example	This example shows how to modify the DNS server of the switch. `Switch(config)# ip dns 111.111.111.111 222.222.222.222`

	This example shows current DNS server of the switch.
	`Switch# show ip dns`
	`DNS lookup is enabled`
	`DNS Server 1 : 111.111.111.111`
	`DNS Server 2 : 222.222.222.222`

ip dns lookup

Syntax	**ip dns lookup no** **ip dns lookup**
Parameter	
Default	Default DNS lookup is enabled
Mode	Global Configuration
Usage	Use "**ip dns lookup**" command to enable the Domain Name to IP address service. And use "**no ip dns**" to disable the DNS service.

Example	This example enables the DNS service on the system.
	`Switch(config)# ip dns lookup`
	
	This example shows the DNS service status.
	`Switch# show ip dns`
	`DNS Server 1 : 111.111.111.111`
	`DNS Server 2 : 222.222.222.222`

ipv6 autoconfig

Syntax	**ipv6 autoconfig** **no ipv6 autoconfig**
Parameter	
Default	Default IPv6 auto config is enabled.
Mode	Global Configuration
Usage	Use "**ipv6 autoconfig**" command to enabled IPv6 auto configuration feature. Use "**no ipv6 autoconfig**" command to disabled IPv6 auto configuration feature.

Example	This example shows how to disable IPv6 auto config.
	`Switch(config)# no ipv6 autoconfig`
	
	This example shows how to show current IPv6 auto config state.
	`Switch# show ipv6`
	`IPv6 DHCP Configuration : Disabled`
	`IPv6 DHCP DUID :`

```
IPv6 Auto Configuration     : Disabled
IPv6 Link Local Address     : fe80::dcad:beff:feef:102/64
IPv6 static Address          : fe80::20e:2eff:fef1:4b3c/128
IPv6 static Gateway Address : ::
IPv6 in use Address          : fe80::dcad:beff:feef:102/64
IPv6 in use Gateway Address : ::
```

ipv6 address

Syntax **ipv6 address** *X:X::X:X* **prefix** *<0-128>*

Parameter

address *X:X::X:X*	Specify IPv6 address for switch
prefix *<0-128>*	Specify IPv6 prefix length for switch

Default No default ipv6 address on the switch.

Mode Global Configuration

Usage Use "**ipv6 address**" command to specify static IPv6 address.

Example This example shows how to add static ipv6 address of the switch.

```
Switch(config)# ipv6 address fe80::20e:2eff:fef1:4b3c prefix
128
```

This example shows how to show current ipv6 address of the switch.

```
Switch# show ipv6
IPv6 DHCP Configuration     : Disabled
IPv6 DHCP DUID               :
IPv6 Auto Configuration     : Enabled
IPv6 Link Local Address     : fe80::dcad:beff:feef:102/64
IPv6 static Address          : fe80::20e:2eff:fef1:4b3c/128
IPv6 static Gateway Address : ::
IPv6 in use Address          : fe80::dcad:beff:feef:102/64
IPv6 in use Gateway Address : ::
```

ipv6 default-gateway

Syntax **ipv6 default-gateway** *X:X::X:X*

Parameter

X:X::X:X	IPv6 gateway

Default No default ipv6 default gateway address on the switch.

Mode Global Configuration

Usage Use "**ipv6 default-gateway**" command to modify default gateway IPv6 address.

Example This example shows how to modify the ipv6 default gateway address of the switch.

```
Switch(config)# ipv6 default-gateway fe80::dcad:beff:feef:103

Switch# show ipv6
IPv6 DHCP Configuration     : Disabled
IPv6 DHCP DUID               :
IPv6 Auto Configuration     : Enabled
IPv6 Link Local Address     : fe80::dcad:beff:feef:102/64
IPv6 static Address          : fe80::20e:2eff:fef1:4b3c/128
IPv6 static Gateway Address : ::
IPv6 in use Address          : fe80::dcad:beff:feef:102/64
IPv6 in use Gateway Address : ::
```

ipv6 dhcp

Syntax **ipv6 dhcp no**
ipv6 dhcp

Parameter

Default Default DHCPv6 client is disabled.

Mode Global Configuration

Usage Use "**ipv6 dhcp**" command to enabled dhcpv6 client to get IP address from remote DHCPv6 server.
Use "**no ipv6 dhcp**" command to disabled dhcpv6 client and use static ipv6 address or ipv6 auto config address.

Example This example shows how to enable dhcp client.

```
Switch(config)# ipv6 dhcp
```

This example shows how to show current dhcpv6 client state of the switch.

```
Switch# show ipv6 dhcp
DHCPv6 Status : enabled
```

ip service

Syntax

ip (telnet | ssh | http | https)
no ip (telnet | ssh | http | https)

Parameter

telnet	Telnet daemon configuration
ssh	SSH (Secure Shell) configuration
http	HTTP server configuration
https	HTTPS server configuration

Default

Default telnet service is disabled.
Default ssh service is disabled.
Default http service is enabled.
Default https service is disabled.

Mode

Global Configuration

Usage

Use "**ip service**" command to enable all kinds of ip services. Such as telnet, ssh, http and https.
Use no form to disable service.

Example

This example shows how to enable telnet service and show current telnet service status.

```
Switch(config)# ip telnet
Telnetd daemon enabled.
Switch(config)# exit
Switch# show line telnet
Telnet ==============================
    Telnet Server   : enabled
    Session Timeout : 10 (minutes)
    History Count   : 128
    Password Retry  : 3
    Silent Time     : 0 (seconds)
```

This example shows how to enable https service and show current https service status.

```
Switch(config)# ip https

Switch(config)# exit
Switch# show ip https
   HTTPS daemon : enabled
Session Timeout : 10 (minutes)
```

ip session-timeout

Syntax

ip (http | https) session-timeout *<0-86400>*

Parameter

http	Specify session timeout for http service.
https	Specify session timeout for https service.
<0-86400>	Specify session timeout minutes. 0 means never timeout.

Default

Default session timeout for http and https is 10 minutes.

Mode

Global Configuration

Usage

Use "**ip session-timeout**" command to specify the session timeout value for http or https service. When user login into WEBUI and do not do any action after session timeout will be logged out.

Example

This example shows how to change http session timeout to 15min and https session timeout to 20min

```
Switch(config)# ip http session-timeout 15
Switch(config)# ip https session-timeout 20
```

This example shows how to enable https service and show current https service status.

```
Switch# show ip http
   HTTPS daemon : enabled
Session Timeout : 15 (minutes)
Switch# show ip https
   HTTPS daemon : disabled
Session Timeout : 20 (minutes)
```

ip ssh

Syntax

ip ssh (v1|v2|all)
no ip ssh (v1|v2|all)

Parameter

v1	SSH v1 host keys
v2	SSH v2 host keys
all	Both SSH v1 and v2 host keys

Default	Version 2 key files will be generated by default
Mode	Global Configuration
Usage	Use "**ip ssh**" command to generate the key files for ssh connection. Use no form to delete key files. SSH connection may not connect if no any v1 or v2 ssh key files exist.
Example	This example shows how to delete and re-generate ssh version 2 key files.

```
Switch(config)# no ip ssh v2
Switch(config)# do show flash
  File Name             File Size        Modified
-------------- ---------------- --------------
 startup-config            1913       2000-01-01 08:29:10
 rsa1                      976         2000-01-05 23:28:38
 ssl_cert                  875         2000-01-05 23:03:20
 image0 (active)           4856825    2014-04-02 15:17:34

Switch(config)# ip ssh v2

Generating a SSHv2 default RSA Key.
This may take a few minutes, depending on the key size.

Generating a SSHv2 default DSA Key.
This may take a few minutes, depending on the key size.

Switch(config)# do show flash
  File Name             File Size        Modified
-------------- ---------------- --------------
 startup-config            1913       2000-01-01 08:29:10
 rsa1                      976         2000-01-05 23:28:38
 rsa2                      1675        2000-01-05 23:34:43
 dsa2                      668         2000-01-05 23:34:58
 ssl cert                  875         2000-01-05 23:03:20
 image0 (active)           4856825    2014-04-02 15:17:34
```

line

Syntax	**line** (**console** | **telnet** | **ssh**)

Parameter		
	console	Console terminal line.
	telnet	Virtual terminal for remote console access (Telnet).
	ssh	Virtual terminal for secured remote console access (SSH)
Default	No default value for this command.	

Mode	Global Configuration
Usage	Some configurations are line based. In order to configure these configurations, we need to enter Line Configuration mode to configure them. Use "**line**" command to enter the Line Configuration mode and select the line to be configured. In Line Configuration mode, the prompt will show as "**Switch(config-line)#**"

Example	This example shows how to enter Interface Configuration mode
	`Switch# configure`
	`Switch(config)# line console`
	`Switch(config-line)#`

reboot

Syntax	**reboot**
Parameter	
Default	No default value for this command.
Mode	Privileged EXEC
Usage	Use "**reboot**" command to make system hot restart.
Example	This example shows how to restart the system `Switch# reboot`

enable password

Syntax	**enable [privilege <1-15>] (password** *UNENCRYPY-PASSWORD* | **secrect** *UNENCRYPY-PASSWORD* | **secret encrypted** *ENCRYPT-PASSWORD*) **no enable** [**privilege** *<0-15>*]
Parameter	**privilege** *<0-15>* Use clear text password. **password** Privilege level. **secret** Privilege level

Default	Default enable password for all privilege levels are "".
Mode	Global Configuration
Usage	Use "**enable password**" command to edit password for each privilege level for enable authentication. And use "**no enable**" command to restore enable password to default empty value. The only way to show this configuration is using "**show running-config**" command.
Example	This example shows how to edit enable password for privilege level 15 `Switch(config)# enable secret enblpasswd`

exec-timeout

Syntax	**exec-timeout** <*0-65535*>	
Parameter	<*0-65535*>	Specify session timeout minutes. 0 means never timeout
Default	Default session timeout for all lines are 10 minutes.	
Mode	Line Configuration	
Usage	Use "**exec-timeout**" command to specify the session timeout value for CLI running on console, telnet or ssh service. When user login into CLI and do not do any action after session timeout will be logged out from the CLI session.	

Example	This example shows how to change console session timeout to 15min ,telnet session timeout to 20min and ssh session timeout to 25min.
	`Switch(config)# line console`
	`Switch(config-line)# exec-timeout 15`
	`Switch(config-line)# exit`
	`Switch(config)# line telnet`
	`Switch(config-line)# exec-timeout 20`
	`Switch(config-line)# exit`
	`Switch(config)# line ssh`
	`Switch(config-line)# exec-timeout 25`
	`Switch(config-line)# exit`
	
	This example shows how show line information.
	`Switch# show line`	

```
Console ==============================
    Session Timeout : 15 (minutes)
    History Count   : 128
    Password Retry  : 3
    Silent Time     : 0 (seconds)
Telnet ===============================
    Telnet Server   : disabled
    Session Timeout : 20 (minutes)
    History Count   : 128
    Password Retry  : 3
    Silent Time     : 0 (seconds)
SSH ==================================
    SSH Server      : disabled
    Session Timeout : 25 (minutes)
    History Count   : 128
    Password Retry  : 3
    Silent Time     : 0 (seconds)
```

password-thresh

Syntax **password-thresh** *<0-120>*

Parameter

<0-120>	CLI login password intrusion threshold

Default Default password fail retry number is 3.

Mode Line Configuration

Usage Use "**password-thresh**" command to specify the password fail retry number for CLI running on console, telnet or ssh service. When user input password to login and authenticate failed, the fail retry number will increase one. After fail retry number exceed configured one, the CLI will block login for the period of silent time which configured by the command "**silent-time**".

Example This example shows how to change console fail retry number to 4, telnet fail retry number to 5 and ssh fail retry number to 6.

```
Switch(config)# line console
Switch(config-line)# password-thresh 4
Switch(config-line)# exit
Switch(config)# line telnet
Switch(config-line)# password-thresh 5
Switch(config-line)# exit
Switch(config)# line ssh
Switch(config-line)# password-thresh 6
Switch(config-line)# exit
```

This example shows how show line information.

```
Switch# show line
Console ==============================
    Session Timeout : 10 (minutes)
    History Count   : 128
    Password Retry  : 4
    Silent Time     : 0 (seconds)
Telnet ===============================
    Telnet Server   : disabled
    Session Timeout : 10 (minutes)
    History Count   : 128
    Password Retry  : 5
    Silent Time     : 0 (seconds)
SSH ==================================
    SSH Server      : disabled
    Session Timeout : 10 (minutes)
    History Count   : 128
    Password Retry  : 6
    Silent Time     : 0 (seconds)
```

ping

Syntax

ping *HOSTNAME* **[count** *<1-999999999>***]**

Parameter

HOSTNAME	Host name.
count *<1-999999999>*	The number of repetitions.

Default

No default value for this command.

Mode

User EXEC
Privileged EXEC

Usage

Use "**ping**" command to do network ping diagnostic.

Example

This example shows how to ping remote host 192.168.1.111.

```
Switch# ping 192.168.1.111
PING 192.168.1.111 (192.168.1.111): 56 data bytes
64 bytes from 192.168.1.111: icmp_seq=0 ttl=128 time=10.0 ms
64 bytes from 192.168.1.111: icmp_seq=1 ttl=128 time=0.0 ms
64 bytes from 192.168.1.111: icmp_seq=2 ttl=128 time=0.0 ms
64 bytes from 192.168.1.111: icmp_seq=3 ttl=128 time=0.0 ms

--- 192.168.1.111 ping statistics ---
4 packets transmitted, 4 packets received, 0% packet loss
round-trip min/avg/max = 0.0/2.5/10.0 ms
```

traceroute

Syntax

traceroute *A.B.C.D* **[max_hop** *<2-255>***]**

Parameter

A.B.C.D	Specify IPv4 to trace.
max_hop *<2-255>*	Specify maximum hop to trace.

Default

No default value for this command.

Mode

User EXEC
Privileged EXEC

Usage

Use "**traceroute**" command to do network trace route diagnostic.

Example

This example shows how to trace route host 192.168.1.111.

```
Switch# traceroute 192.168.1.111
traceroute to 192.168.1.111 (192.168.1.111), 30 hops max, 40
byte packets
 1  192.168.1.111 (192.168.1.111)  0 ms  10 ms  0 ms
```

show arp

Syntax

show arp

Parameter

Default

No default value for this command.

Mode

User EXEC
Privileged EXEC

Usage

Use "**show arp**" command to show all arp entries.

Example

This example shows how to show arp entries.

```
Switch# show arp
Address         HWtype  HWaddress           Flags Mask       Iface
192.168.1.111   ether   00:0E:2E:F1:4B:3C   C                eth0
```

show cpu utilization

Syntax **show cpu utilization**

Parameter

Default No default value for this command.

Mode Privileged EXEC

Usage Use "**show cpu utilization**" command to show current CPU utilization.

Example This example shows how to show current CPU utilization.

```
Switch# show cpu utilization
CPU utilization
---------------
Current: 30%
```

show history

Syntax **show history**

Parameter

Default No default value for this command.

Mode User EXEC
Privileged EXEC
Global Configuration

Usage Use "**show history**" to show commands we input before.

Example This example shows how show history commands.

```
Switch# show history
Maximun History Count: 100
-------------------------------------------------
```

1. enable
2. configure
3. line console
4. exit
5. show history
6. line
7. exit
8. show history
9. configure
10. line
11. line console
12. exit
13. line console
14. history 100
15. exit
16. show history
17. exit
18. show history

show info

Syntax

show info

Parameter

Default

No default value for this command.

Mode

User EXEC
Privileged EXEC

Usage

Use "**show info**" command to show system summary information.

Example

This example shows how to show system version.

```
Switch# show info
System Name       : Switch
System Location   : Default Location
System Contact    : Default Contact
MAC Address       : DE:AD:BE:EF:01:02
IP Address        : 192.168.1.1
Subnet Mask       : 255.255.255.0
Loader Version    : 1.3.0.26225
Loader Date       : Thu May 17 15:19:42 CST 2012
Firmware Version : 2.5.0-beta.32811
Firmware Date     : Mon Sep 24 19:33:42 CST 2012
System Object ID : 1.3.6.1.4.1.27282.3.2.10
System Up Time    : 0 days, 1 hours, 49 mins, 29 secs
```

show ip

Syntax	**show ip**
Parameter	
Default	No default value for this command.
Mode	User EXEC Privileged EXEC
Usage	Use "**show ip**" command to show system IPv4 address, net mask and default gateway.

Example	This example shows how to show current ipv4 address of the switch.
	`Switch# show ip`
	`IP Address: 192.168.1.200`
	`Subnet Netmask: 255.255.255.0`
	`Default Gateway: 192.168.1.254`

show ip dhcp

Syntax	**show ip dhcp**
Parameter	
Default	No default value for this command.
Mode	User EXEC Privileged EXEC
Usage	Use "**show ip dhcp**" command to show IPv4 dhcp client enable state.

Example	This example shows how to show current dhcp client state of the switch.
	`Switch# show ip dhcp`
	`DHCP Status : enabled`

show ip dns

Syntax	**show ip dns**
Parameter	
Default	No default value for this command.
Mode	User EXEC Privileged EXEC
Usage	Use "**show ip dns**" command to show system IPv4 DNS addresses.

Example	This example shows how to show current ipv4 address of the switch.
	`Switch# show ip dns`
	`DNS lookup is enabled`
	`DNS Server 1 : 168.95.1.1`
	`DNS Server 2 : 168.95.192.1`

show ip http

Syntax	**show ip (http|https)**
Parameter	
Default	No default value for this command.
Mode	Privileged EXEC
Usage	Use "**show ip http**" command to show HTTP/HTTPS information.

Example	This example shows how to show current ipv4 address of the switch.
	`Switch# show ip http`
	`HTTP daemon : enabled`
	`Session Timeout : 10 (minutes)`
	
	`Switch# show ip https`
	`HTTPS daemon : enabled`
	`Session Timeout : 10 (minutes)`

show ipv6

Syntax **show ipv6**

Parameter

Default No default value for this command.

Mode User EXEC
Privileged EXEC

Usage Use "**show ipv6**" command to show system IPv6 address, net mask, default gateway and auto config state.

Example This example shows how to show current ipv6 address of the switch.

```
Switch# show ipv6
IPv6 DHCP Configuration      : Disabled
IPv6 DHCP DUID                 :
IPv6 Auto Configuration      : Enabled
IPv6 Link Local Address      : fe80::dcad:beff:feef:102/64
IPv6 static Address           : fe80::20e:2eff:fef1:4b3c/128
IPv6 static Gateway Address : ::
IPv6 in use Address           : fe80::dcad:beff:feef:102/64
IPv6 in use Gateway Address : ::
```

show ipv6 dhcp

Syntax **show ipv6 dhcp**

Parameter

Default No default value for this command.

Mode User EXEC
Privileged EXEC

Usage Use "**show ipv6 dhcp**" command to show system IPv6 dhcp client enable state.

Example This example shows how to show current dhcpv6 client state of the switch.

```
Switch# show ipv6 dhcp
DHCPv6 Status : enabled
```

show line

Syntax

show line [(**console** | **telnet** | **ssh**)]

Parameter

console	Select console line to show.
telnet	Select telnet line to show.
ssh	Select ssh line to show.

Default

No default value for this command.

Mode

Privileged EXEC

Usage

Use "**show line**" command to show all line configurations including session timeout, history count, password retry number and silent time. For telnet and ssh, it also shows the service enable/disable state.

Example

This example shows how show all lines' information.

```
Switch# show line
Console ==============================
    Session Timeout : 15 (minutes)
    History Count   : 128
    Password Retry  : 3
    Silent Time     : 0 (seconds)
Telnet ===============================
    Telnet Server   : disabled
    Session Timeout : 20 (minutes)
    History Count   : 128
    Password Retry  : 3
    Silent Time     : 0 (seconds)
SSH ==================================
    SSH Server      : disabled
    Session Timeout : 25 (minutes)
    History Count   : 128
    Password Retry  : 3
    Silent Time     : 0 (seconds)
```

show memory statistics

Syntax

show memory statistics

Parameter

Default

No default value for this command.

Mode

Privileged EXEC

Usage	Use "**show memory statistics**" command to show current memory utilization.

Example

This example show how to show current system memory statistics.

```
Switch# show memory statistics
            total(KB)      used(KB)      free(KB)    shared(KB)    buffer(KB)     cache(KB)
-------------------+-------------+-------------+-------------+-------------+-------------
Mem:            62408         56424          5984             0          1320         19328
-/+ buffers/cache:            35776         26632
Swap:       0       0       0
```

show privilege

Syntax	**show privilege**
Parameter	
Default	No default value for this command.
Mode	User EXEC Privileged EXEC
Usage	Use "**show privilege**" command to show the privilege level of the current user.

Example

This example shows how to show arp entries.

```
Switch# show privilege
Current CLI Username:  admin
Current CLI Privilege: 15
```

show username

Syntax	**show username**
Parameter	
Default	No default value for this command
Mode	Privileged EXEC
Usage	Use "**show username**" command show all user accounts in local database.

Example

This example shows how to show existing user accounts.

```
Switch# show username
 Priv  | Type  |        User Name     |         Password
 ------+-------+----------------------+-----------------------
 01    | secret |        | dnXencJRwflV6
 15    | secret |        admin | FzjrGO6vfbERY
 15    | secret |        test | 7p57T9yMkViSUS
```

show users

Syntax

show users

Parameter

Default

No default value for this command

Mode

Privileged EXEC

Usage

Use "**show users**" command show information of all active users.

Example

This example shows how to show existing user accounts.

```
Switch# show users
Username     Protocol        Location
-------------- ------------ ----------------------
admin          console         0.0.0.0
admin          telnet   192.168.1.111
admin          ssh      192.168.1.111
```

show version

Syntax

show version

Parameter

Default

No default value for this command.

Mode

User EXEC
Privileged EXEC

Usage

Use "**show version**" command to show loader and firmware version and build date.

Example

This example shows how to show system version.

```
Switch# show version
Loader Version        : 1.3.0.26225
Loader Date           : Thu May 17 15:19:42 CST 2012
Firmware Version : 2.5.0-beta.32811
Firmware Date         : Mon Sep 24 19:33:42 CST 2012
```

silent-time

Syntax

silent-time *<0-65535>*

Parameter

<0-65535>	Specify silent time with unit seconds. 0 means do not silent.

Default

Default silent time is 0.

Mode

Line Configuration

Usage

Use "**silent time**" command to specify the silent time for CLI running on console, telnet or ssh service. When user input password to login and authenticate failed, the fail retry number will increase one. After fail retry number exceed configured one, the CLI will block login for the period of silent time which configured by the command "**silent-time**".

Example

This example shows how to change console silent time to 10, telnet silent time to 15 and ssh silent time to 20.

```
Switch(config)# line console
Switch(config-line)# silent-time 10
Switch(config-line)# exit
Switch(config)# line telnet
Switch(config-line)# silent-time 15
Switch(config-line)# exit
Switch(config)# line ssh
Switch(config-line)# silent-time 20 Switch(config-line)# exit
```

This example shows how show line information.

```
Switch# show line
Console ==============================
        Session Timeout : 10 (minutes)
        History Count         : 128
        Password Retry        : 3
        Silent Time           : 10 (seconds)
        Telnet
 ==============================
Telnet Server          : disabled Session
Timeout : 10 (minutes) History Count        : 128
Password Retry         : 3
Silent Time   : 15 (seconds) SSH
```

```
==================================
SSH Server  : disabled Session
Timeout : 10 (minutes)
History Count        : 128
Password Retry       : 3
Silent Time  : 20 (seconds)
```

system name

Syntax **system name** *NAME*

Parameter

NAME	Specify system name string.

Default Default name string is “Switch”.

Mode Global Configuration

Usage Use “**system name**” command to modify system name information of the switch. The system name is also used to be CLI prompt.

Example This example shows how to modify contact information

```
Switch(config)# system name myname
myname(config)#
```

This example shows how to show system name information

```
Switch# show info
System Name          : myname
System Location      : Default Location
System Contact       : Default
Contact MAC Address       : DE:AD:BE:EF:01:02
IP Address    : 192.168.1.1
Subnet Mask: 255.255.255.0
Loader Version       : 1.3.0.26225
Loader Date : Thu May 17 15:19:42 CST 2012 Firmware Version : 2.5.0-beta.32811
Firmware Date        : Mon Sep 24 19:33:42 CST 2012 System Object ID :
1.3.6.1.4.1.27282.3.2.10
 System Up Time      : 0 days, 0 hours, 2 mins, 37 secs
```

system contact

Syntax **system contact** *CONTACT*

Parameter	*CONTACT*	Specify contact string.

Default

Default contact string is “Default Contact”.

Mode

Global Configuration

Usage

Use “**system contact**” command to modify contact information of the switch.

Example

This example shows how to modify contact information

```
Switch(config)# system contact callme
```

This example shows how to show system contact information

```
Switch# show info
System Name       : Switch
System Location   : Default Location
System Contact    : callme
MAC Address       : DE:AD:BE:EF:01:02
IP Address        : 192.168.1.1
Subnet Mask       : 255.255.255.0
Loader Version    : 1.3.0.26225
Loader Date       : Thu May 17 15:19:42 CST 2012
Firmware Version : 2.5.0-beta.32811
Firmware Date     : Mon Sep 24 19:33:42 CST 2012
System Object ID : 1.3.6.1.4.1.27282.3.2.10
System Up Time    : 0 days, 0 hours, 2 mins, 37 secs
```

system location

Syntax

system location *LOCATION*

Parameter	*CONTACT*	Specify location string.

Default

Default location string is “Default Location”.

Mode

Global Configuration

Usage

Use “**system location**” command to modify location information of the switch.

Example

This example shows how to modify contact information

```
Switch(config)# system location home
```

This example shows how to show system location information

```
Switch# show info
System Name       : SwitchEF0102
System Location   : home
System Contact    : Default Contact
MAC Address       : DE:AD:BE:EF:01:02
IP Address        : 192.168.1.1
Subnet Mask       : 255.255.255.0
Loader Version    : 1.3.0.26225
Loader Date       : Thu May 17 15:19:42 CST 2012
Firmware Version : 2.5.0-beta.32811
Firmware Date     : Mon Sep 24 19:33:42 CST 2012
System Object ID : 1.3.6.1.4.1.27282.3.2.10
System Up Time    : 0 days, 0 hours, 2 mins, 37 secs
```

terminal length

Syntax

terminal length *<0-24>*

Parameter

<0-24>	Specify terminal length value. 0 means no limit.

Default

Default terminal length is 24.

Mode

User EXEC
Privileged EXEC

Usage

Use "**terminal length**" command to specify the maximum line number the terminal is able to print.

Example

This example shows how to change terminal length.

```
Switch# terminal length 3
Switch# show running-config
SYSTEM CONFIG FILE ::= BEGIN
! System Description: RTK RTL8380-24FE-4GEC Switch
! System Version: v3.0.4.46766
--More--
```

username

Syntax

username *WORD<0-32>* [**privilege** (**admin**|**user**|*<0-15>*)] (**nopassword** | **password** *UNENCRYPY-PASSWORD* | **secrect** *UNENCRYPY-PASSWORD* | **secret encrypted** *ENCRYPT-PASSWORD*)
no username *WORD<0-32>*

Parameter		
	username	**Local user name**
	privilege	Local user privilege level
	password	Use clear text password
	nopassword	No password for this user.
	Secret	Use encrypted password.

Default Default username "admin" has password "admin" with privilege 15.

Mode Global Configuration

Usage Use "**username**" command to add a new user account or edit an existing user account. And use "**no username**" to delete an existing user account. The user account is a local database for login authentication.

Example

This example shows how to add a new user account.

```
Switch(config)# username test secret passwd
```

This example shows how to show existing user accounts.

```
Switch# show username
Priv  |  Type   |     User Name        |            Password
------+---------+----------------------+------------------------
  01   | secret |                      | dnXencJRwflV6
  15   | secret |                admin | FzjrGO6vfbERY
  15   | secret |                 test | 7p57T9yMkViSUS
```

4. Authentication Manager

authentication

Syntax **authentication (dot1x|mac|web)**
no authentication (dot1x|mac|web)

Parameter

Default Default is disabled for all type

Mode Global Configuration

Usage

Use "**authentication**" command to enable the global setting of 802.1x/MAC/WEB authentication network access control.
Use the **no** form of this command to disable 802.1x/MAC/WEB authentication.

Example

The following example shows how to enable 802.1x/MAC/WEB authentication.

```
Switch(config)# authentication dot1x
```

```
Switch(config)# authentication mac
Switch(config)# authentication web
Switch# show authentication
Autentication dot1x state      : enabled
Autentication mac state        : enabled
Autentication web state        : enabled
Guest VLAN                     : enabled (3)
Mac-auth Radius User ID Format: XXXXXXXXXXXX

……
```

authentication (Interface)

Syntax

authentication (**dot1x**|**mac**|**web**)
no authentication (**dot1x**|**mac**|**web**)

Parameter

Default

Default is disabled for all type

Mode

Interface Configuration

Usage

Use "**authentication**" interface command to enable the port setting of 802.1x/MAC/WEB authentication network access control.
Use the **no** form of this command to disable 802.1x/MAC/WEB authentication.

Example

The following example shows how to enable 802.1x/MAC/WEB authentication.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# authentication dot1x
Switch(config-if)# authentication mac
Switch(config-if)# authentication web
Switch# show authentication interface GigabitEthernet 1
Interface FastEthernet1
  Admin Control           : disable
  Host Mode               : multi-auth
  Type dot1x State        : enabled
  Type mac State          : enabled
  Type web State          : enabled
……
```

authentication mac radius

Syntax	**authentication mac radius** [**mac-case** (**lower**|**upper**)] [**mac-delimiter** (**colon**|**dot**|**hyphen**|**none**) [**gap** (2|4|6)]]
Parameter	**mac-case** (**lower**|**upper**) — Select radius user id to be upper case or lower case. **mac-delimiter** — MAC address delimiter used for Radius user ID format **gap (2|4|6)** — **The gap of each delimiter**
Default	Default radius id format is upper case with none delimiter.
Mode	Global Configuration
Usage	Use "**authentication mac radius**" command to configure the radius user id format used by MAC authentication Radius method.
Example	The following example shows how to configure MAC authentication radius id format to be upper case with colon delimiter every 2 chars

```
Switch(config)# authentication mac radius mac-case upper
Switch(config)# authentication mac radius mac-delimiter colon
gap 2
Switch# show authentication
Autentication dot1x state      : enabled
Autentication mac state        : disabled
Autentication web state        : disabled

Mac-auth Radius User ID Format: XX:XX:XX:XX:XX:XX
……
```

authentication mac local

Syntax	**authentication mac local** *mac-addr* **control auth** [**vlan** <*1-4094*>] [**reauth-period** <*300-4294967294*>] [**inactive-timeout** <*60-65535*>] **authentication mac local** *mac-addr* **control unauth** **no authentication mac local** *mac-addr*

Parameter		
	mac-addr	MAC Authentication local MAC address
	control auth	Host will be set to Authorized
	control unauth	Host will be set to UnAuthorized
	vlan <*1-4094*>	Local entry assigned vlan

reauth-period *<300-4294967294>*	
inactive-timeout	**Time in seconds after which an automatic re-authentication** Interval in seconds after which if there is no activity from the client then it will be unauthorized *<60-65535>*

Default Default is no local MAC Authentication entry.

Mode Global Configuration

Usage Use "**authentication mac local**" command to add local MAC authentication hosts in database. This local host database is used when MAC authentication method is configured as "local". The MAC authentication module will find host in this local database and authenticated it.
Use the **no** form of this command to delete local host from database.

Example The following example shows how to add a new local mac authentication host.

```
Switch(config)# authentication mac local 00:11:22:33:00:01
control auth vlan 3 reauth-period 500 inactive-timeout 300
Switch# show authentication
.....

Mac-auth Local Entry          :
                                                    Reauth     Inactive
MAC Address            Control        VLAN    Period     Timeout
------------------- -------------- ------ ---------- ---------
 00:11:22:33:00:01    Authorized      3      500        300
.....
```

authentication guest-vlan

Syntax **authentication guest-vlan** *<1-4094>*
no authentication guest-vlan

Parameter *<1-4094>* VLAN ID

Default Default guest VLAN is disabled

Mode Global Configuration

Usage Use "**authentication guest-vlan**" command to enable the global setting of guest VLAN and specify guest VLAN ID.
Use the **no** form of this command to disable guest VLAN.

Example The following example shows how to create guest VLAN.

```
Switch(config)# vlan 3
```

```
Switch(config-vlan)# exit
Switch(config)# authentication guest-vlan 3
Switch# show authentication
Autentication dot1x state      : enabled
Autentication mac state        : disabled
Autentication web state        : disabled
Guest VLAN                     : enabled (3)
Mac-auth Radius User ID Format: XXXXXXXXXXXX

.....
```

authentication guest-vlan (Interface)

Syntax

authentication guest-vlan
no authentication guest-vlan

Parameter

Default

Default guest VLAN is disabled

Mode

Interface Configuration

Usage

Use "**authentication guest-vlan**" command to enable the port setting of guest VLAN.
Use the **no** form of this command to disable guest VLAN.

Example

The following example shows how to enable guest VLAN.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# authentication guest-vlan
```

authentication host-mode

Syntax

authentication host-mode (**multi-auth**|**multi-host**|**single-host**)
no authentication host-mode

Parameter

multi-auth	Multiple Authentication Mode
multi-host	Multiple Host Mode.
single-host	Single Host Mode

Default

Default is multi-auth mode.

Mode	Interface Configuration
Usage	Use "**authentication host-mode**" command to configure the port authentication host mode. Use the **no** form of this command to restore default value.

Example	The following example shows how to modify port host mode to multi-host.
	`Switch(config)# interface GigabitEthernet 1`
	`Switch(config-if)# authentication host-mode multi-host`
	`Switch# show authentication interface fa1`
	`Interface FastEthernet1`
	`  Admin Control  : auto`
	`  Host Mode  : multi-host`
	`  Type dot1x State  : disabled`
	`  Type mac State  : disabled`
	`  Type web State  : disabled`
	.....

authentication max-hosts

Syntax	**authentication max-hosts** *<1-256>* **no authentication max-hosts**
Parameter	*<1-256>* Available max host number in multi-auth mode.
Default	Default max host number is 256
Mode	Interface Configuration
Usage	Use "**authentication max-hosts**" command to configure the port max hosts number for multi-auth mode. The host exceed the max host number is not allowed to create authentication session and do authenticating. Use **no** form of this command to restore default value.

Example	The following example shows how to change port max hosts number.
	`Switch(config)# interface GigabitEthernet 1`
	`Switch(config-if)# authentication max-hosts 100`
	`Switch# show mac-auth interface GigabitEthernet 1`
	`Interface FastEthernet1`
	`  Admin Control  : disable`
	`  Host Mode  : multi-auth`
	`  Type dot1x State  : disabled`
	`  Type mac State  : disabled`
	`  Type web State  : disabled`
	`  Type Order  : dot1x`
	`  MAC/WEB Method Order  : radius`
	`  Guest VLAN  : disabled`
	`  Reauthentication  : disabled`
	`  Max Hosts  : 100`
	.....

authentication method

Syntax

authentication method (**local** [**radius**] | **radius** [**local**])
no authentication order

Parameter

local	Use local account to authenticate
radius	Use remote RADIUS server to authenticate

Default

Default is RADIUS method in first place and no other method.

Mode

Interface Configuration

Usage

Use "**authentication method**" command to configure the port authentication method order.
Use the **no** form of this command to restore default value.

Example

The following example shows how to modify port authentication order to local and then RADIUS.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# authentication method local radius
Switch# show authentication interface GigabitEthernet 1
Interface FastEthernet1
  Admin Control           : auto
  Host Mode               : multi-host
  Type dot1x State        : disabled
  Type mac State          : disabled
  Type web State          : disabled
  Type Order             : dot1x mac web
  MAC/WEB Method Order   : local radius
.....
```

authentication order

Syntax

authentication order (**dot1x** [**mac**] [**web**] | **mac** [**dot1x**] [**web**] | **web**)
no authentication order

Parameter

dot1x	802.1X authentication
mac	MAC-Based authentication
web	Web-Based authentication authentication

Default

Default is dot1x type in first place and no other types.

Mode

Interface Configuration

Usage

Use "**authentication order**" command to configure the port authentication type order.
Use the **no** form of this command to restore default value.

Example

The following example shows how to modify port authentication order to dot1x, mac and web.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# authentication order dot1x mac web
Switch# show authentication interface GigabitEthernet 1
Interface FastEthernet1
  Admin Control           : auto
  Host Mode               : multi-host
  Type dot1x State        : disabled
  Type mac State          : disabled
  Type web State          : disabled
  Type Order              : dot1x mac web
.....
```

authentication port-control

Syntax

authentication port-control (**auto**|**force-auth**|**force-unauth**)
no authentication port-control

Parameter

auto	PortState will be set to AUTO
force-auth	PortState will be set to Authorized.
force-unauth	PortState will be set to UnAuthorized have no network accessibility.

Default

Default is disabled.

Mode

Interface Configuration

Usage

Use "**authentication port-control**" command to enable the port authentication control mode.
Use the **no** form of this command to disable authentication port control.

Example

The following example shows how to configure port control to auto mode.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# authentication port-control auto
Switch# show authentication interface GigabitEthernet 1
Interface FastEthernet1
  Admin Control           : auto
  Host Mode               : multi-auth
  Type dot1x State        : disabled
  Type mac State          : disabled
  Type web State          : disabled
.....
```

authentication radius-attributes vlan

Syntax

authentication radius-attributes vlan (**reject** | **static**)
no authentication radius-attributes vlan

Parameter

reject	If the Radius server authorized the supplicant, but did not provide a supplicant VLAN, the supplicant is rejected. ed the option is applied by default
static	If the Radius server authorized the supplicant, but did not provide a supplicant VLAN, the supplicant information, keep original VLAN of host.

Default

Default radius attributes VLAN assign mode is static.

Mode

Interface Configuration

Usage

Use "**authentication radius-attributes vlan**" command to configure the port RADIUS VLAN assign mode.
Use the **no** form of this command to disable the port RADIUS VLAN assign.

Example

The following example shows how to configure port VLAN assign to reject mode.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# authentication radius-attributes vlan
reject
Switch# show authentication interface GigabitEthernet 1
Interface FastEthernet1
  Admin Control           : disable
  Host Mode               : multi-auth
  Type dot1x State        : disabled
  Type mac State          : disabled
  Type web State          : disabled
  Type Order              : dot1x
  MAC/WEB Method Order    : radius
  Guest VLAN              : disabled
  Reauthentication        : disabled
  Max Hosts               : 256
  VLAN Assign Mode        : reject
.....
```

authentication reauth

Syntax

authentication reauth
no authentication reauth

Parameter	
Default	Default is disabled.
Mode	Interface Configuration
Usage	Use "**authentication reauth**" command to enable the port reauthentication. Use the **no** form of this command to disable reauthentication.
Example	The following example shows how to enable port reauthentication.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# authentication reauth
Switch# show authentication interface GigabitEthernet 1
Interface FastEthernet1
  Admin Control           : disable
  Host Mode               : multi-auth
  Type dot1x State        : disabled
  Type mac State          : disabled
  Type web State          : disabled
  Type Order              : dot1x
  MAC/WEB Method Order    : radius
  Guest VLAN              : disabled
  Reauthentication        : enabled
.....
```

authentication timer inactive

Syntax	**authentication timer inactive** *<60-65535>* **no authentication timer inactive**

Parameter		
	<60-65535>	Interval in seconds after which if there is no activity from the client then it will be unauthorized

Default	Default inactive timeout is 60 seconds.
Mode	Interface Configuration
Usage	Use "**authentication timer inactive**" command to configure the port inactive timeout value. Sometimes, we may assign a long aging time for a host, but in fact, it is not active. This inactive timeout will detect the host is active or not. If the host is inactive exceed this timeout, it should be removed.

Use **no** form of this command to restore default value.

Example

The following example shows how to configure port inactive period.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# authentication timer inactive 300
Switch# show authentication interface GigabitEthernet 1
Interface FastEthernet1
.....
  Common Timers
    Reauthenticate Period: 300
    Inactive  Timeout  :  300
    Quiet Period        : 60
  802.1x Parameters
    EAP Max Request     : 2
    EAP  TX  Period  :  30
    Supplicant  Timeout  :  30
    Server Timeout      : 30
  Web-auth Parameters
    Login Attempt       : 3
```

authentication timer quiet

Syntax

authentication timer quiet *<0-65535>*
no authentication timer quiet

Parameter

<0-65535>	Interval in seconds to wait following a failed authentication exchange

Default

Default quiet period is 60 seconds.

Mode

Interface Configuration

Usage

Use "**authentication timer quiet**" command to configure the port quiet period value.
After authenticating fail many times and the port is guest VLAN disabled, the port/host will enter lock state until quiet period expired. In lock state, the port/host is not allowed to do authenticating.
Use **no** form of this command to restore default value.

Example

The following example shows how to configure port quiet period.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# authentication timer quiet 300
Switch# show authentication interface GigabitEthernet 1
Interface FastEthernet1
.....
  Common Timers
    Reauthenticate Period: 300
    Inactive  Timeout  :  300
    Quiet Period        : 300
```

```
  802.1x Parameters
    EAP Max Request      : 2
    EAP   TX   Period   :   30
    Supplicant  Timeout  :  30
    Server Timeout       : 30
  Web-auth Parameters
    Login Attempt        : 3
```

authentication timer reauth

Syntax

authentication timer reauth *<300-4294967294>*
no authentication timer reauth

Parameter

<300-4294967294>	Time in seconds after which an automatic re-authentication should be initiated

Default

Default reauthentication period is 3600 seconds.

Mode

Interface Configuration

Usage

Use "**authentication timer reauth**" command to configure the port reauthentication period value with unit second if the reauthentication time is not assigned by local database or remote authentication server. On the other hand, if the reauthentication time is assigned by local database or remote server, this configured reauthentication time will be ignored.
Use **no** form of this command to restore default value.

Example

The following example shows how to configure port reauthentication period.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# authentication timer reauth 300
Switch# show authentication interface GigabitEthernet 1
Interface FastEthernet1
.....
  Common Timers
    Reauthenticate Period: 300
    Inactive Timeout     : 60
    Quiet Period         : 60
  802.1x Parameters
    EAP Max Request      : 2
    EAP   TX   Period   :   30
    Supplicant  Timeout  :  30
    Server Timeout       : 30
  Web-auth Parameters
    Login Attempt        : 3
```

authentication web max-login-attempts

Syntax

authentication web max-login-attempts (**infinite**|*<3-10>*)
no authentication web max-login-attempts

Parameter

infinite	No limit to login attempt number
<3-10>	Allow user login fail number

Default

Default max login attempt number is 3.

Mode

Interface Configuration

Usage

Use "**authentication web max-login-attempts**" command to configure the port WEB authentication max login attempt number. After login fail number exceed, the host will enter Lock state and is not able to authenticate until quiet period exceed.
Use **no** form of this command to restore default value.

Example

The following example shows how to configure port max login attempt number.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# authentication web max-login-attempts 5
Switch# show authentication interface GigabitEthernet 1
Interface FastEthernet1
.....
  Common Timers
    Reauthenticate Period: 300
    Inactive  Timeout   :  300
    Quiet Period        : 300
  802.1x Parameters
    EAP Max Request     : 1
    EAP TX Period       : 10
    Supplicant Timeout  : 120
    Server Timeout      : 150
  Web-auth Parameters
    Login Attempt       : 5
```

clear authentication sessions

Syntax

clear authentication sessions
clear authentication sessions interfaces *IF_PORTS*
clear authentication sessions mac *mac-addr*
clear authentication sessions session-id *WORD*
clear authentication sessions type (**dot1x**|**mac**|**web**)

Parameter

interfaces	**Interface status and configuration**

mac	Use MAC address to find specific session
session-id	Use session id to find specific session
type	**Use authentication type to find sessions**

Default Default is no local authentication entry.

Mode Privileged EXEC

Usage Use "**clear authentication sessions**" command to delete existing authentication sessions. If no parameter is specified, all sessions will be deleted.
After authentication session is deleted, host need to do authentication procedure again.

Example The following example shows how to clear all authentication sessions.

```
Switch# clear authentication sessions
Switch# show authentication sessions
No Auth Manager sessions currently exist
```

dot1x

Syntax **dot1x**
no dot1x

Parameter

Default Default 802.1x is disabled

Mode Global Configuration

Usage Use "**dot1x**" command to enable the global setting of 802.1x. The "**authentication dot1x**" command has the same effect as this one. This command is a backward compatible command.
Use the **no** form of this command to disable 802.1x authentication.

Example The following example shows how to enable 802.1x authentication.

```
Switch(config)# dot1x
Switch# show authentication
Autentication dot1x state     : enabled
Autentication mac state       : disabled
Autentication web state       : disabled
Guest VLAN                    : enabled (3)
```

```
Mac-auth Radius User ID Format: XXXXXXXXXXXX

.....
```

dot1x guest-vlan

Syntax

dot1x guest-vlan *<1-4094>*
no dot1x guest-vlan

Parameter

<1-4094> Guest VLAN configuration

Default

Default guest VLAN is disabled

Mode

Global Configuration

Usage

Use "**dot1x guest-vlan**" command to enable the global setting of guest VLAN and specify guest VLAN ID.
Use the **no** form of this command to disable guest VLAN.

Example

The following example shows how to create guest VLAN.

```
Switch(config)# vlan 3
Switch(config-vlan)# exit
Switch(config)# dot1x guest-vlan 3
Switch# show authentication
Autentication dot1x state      : enabled
Autentication mac state        : disabled
Autentication web state        : disabled
Guest VLAN                     : enabled (3)
Mac-auth Radius User ID Format: XXXXXXXXXXXX

.....
```

dot1x max-req

Syntax

dot1x max-req *<1-10>*
no dot1x max-req

Parameter

<1-10> Maximum request retries (default: 2 times),

Default

Default EAP max request number is 2.

Mode	Interface Configuration
Usage	Use "**dot1x max-req**" command to configure the port 802.1x max EAP request value. The max request is the maximum number of EAP requests that can be sent. If a response is not received after the defined period (supplicant timeout), the authentication process is restarted. Use **no** form of this command to restore default value.
Example	The following example shows how to configure port 802.1x EAP TX period.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# dot1x max-req 1
Switch# show authentication interface GigabitEthernet 1
Interface GigabitEthernet 1
.....
  Common Timers
    Reauthenticate Period: 300
    Inactive   Timeout   :  300
    Quiet Period         : 300
  802.1x Parameters
    EAP Max Request      : 1
    EAP TX Period        : 10
    Supplicant Timeout   : 120
    Server Timeout       : 150
  Web-auth Parameters
    Login Attempt        : 3
```

dot1x port-control

Syntax	**dot1x port-control** (**auto**|**force-auth**|**force-unauth**) **no dot1x port-control**	
Parameter	**auto**	PortState will be set to AUTO
	force-auth	PortState will be set to Authorized.
	force-unauth	PortState will be set to UnAuthorized have no network accessibility.
Default	Default is disabled.	
Mode	Interface Configuration	
Usage	Use "**dot1x port-control**" command to enable the port authentication control mode. The "**authentication port-control**" command has the same effect. Use the **no** form of this command to disable authentication port control.	

Example

The following example shows how to configure port control to auto mode.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# dot1x port-control auto
Switch# show authentication interface GigabitEthernet 1
Interface GigabitEthernet 1
  Admin Control           : auto
  Host Mode               : multi-auth
  Type dot1x State        : enabled
  Type mac State          : disabled
  Type web State          : disabled
.....
```

dot1x reauth

Syntax

dot1x reauth
no dot1x reauth

Parameter

Default

Default is disabled.

Mode

Interface Configuration

Usage

Use "**dot1x reauth**" command to enable the port reauthentication. The "**authentication reauth**" command has the same effect, it is a backward compatible command
Use the **no** form of this command to disable reauthentication.

Example

The following example shows how to enable port reauthentication.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# dot1x reauth
Switch# show authentication interface GigabitEthernet 1
Interface GigabitEthernet 1
  Admin Control           : disable
  Host Mode               : multi-auth
  Type dot1x State        : disabled
  Type mac State          : disabled
  Type web State          : disabled
  Type Order              : dot1x
  MAC/WEB Method Order    : radius
  Guest VLAN              : disabled
  Reauthentication        : enabled
.....
```

dot1x timeout reauth-period

Syntax

dot1x timeout reauth-period *<300-4294967294>*
no dot1x timeout reauth-period

Parameter	*<300-4294967294>* Re-authentication period
Default	Default reauthentication period is 3600 seconds.
Mode	Interface Configuration
Usage	Use "**dot1x timout reauth**" command to configure the port reauthentication period value with unit second if the reauthentication time is not assigned by local database or remote authentication server. On the other hand, if the reauthentication time is assigned by local database or remote server, this configured reauthentication time will be ignored. The "**authentication timer reauth**" command has the same effect and it is a backward compatible command. Use **no** form of this command to restore default value.
Example	The following example shows how to configure port 802.1x reauthentication period.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# dot1x timeout reauth-period 300
Switch# show authentication interface GigabitEthernet 1
 Interface GigabitEthernet 1
.....
  Common Timers
    Reauthenticate Period: 300
    Inactive Timeout     : 60
    Quiet Period         : 60

  802.1x Parameters
    EAP Max Request      : 2
    EAP   TX   Period   :   30
    Supplicant  Timeout  :  30
    Server Timeout       : 30
  Web-auth Parameters
    Login Attempt        : 3
```

dot1x timeout quiet-period

Syntax	**dot1x timeout quiet-period** *<0-65535>* **no dot1x timeout quiet-period**
Parameter	*<0-65535>* Quiet period

Default	Default quiet period is 60 seconds.
Mode	Interface Configuration
Usage	Use "**dot1x timeout quiet-period**" command to configure the port quiet period value. The "**authentication timer quiet**" command has the same effect and it is backward compatible command. After authenticating fail many times and the port is guest VLAN disabled, the port/host will enter lock state until quiet period expired. In lock state, the port/host is not allowed to do authenticating. Use **no** form of this command to restore default value.
Example	The following example shows how to configure port 802.1x quiet period.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# dot1x timeout quiet-period 300
Switch# show authentication interface GigabitEthernet 1
 Interface GigabitEthernet 1
.....
  Common Timers
    Reauthenticate Period: 300
    Inactive  Timeout  :  300
    Quiet Period        : 300
  802.1x Parameters
    EAP Max Request     : 2
    EAP  TX  Period  :  30
    Supplicant Timeout  :  30
    Server Timeout      : 30
  Web-auth Parameters
    Login Attempt       : 3
```

dot1x timeout server-timeout

Syntax	**dot1x timeout server-timeout** *<1-65535>* **no dot1x timeout server-timeout**
Parameter	*<1-65535>* Supplicant timeout period
Default	Default server timeout is 30 seconds.
Mode	Interface Configuration
Usage	Use "**dot1x timeout server-timeout**" command to configure the port 802.1x server timeout value. The server timeout is the number of seconds that lapses

before the device resends a request to the authentication server.
Use **no** form of this command to restore default value.

Example

The following example shows how to configure port 802.1x server timeout.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# dot1x timeout supp-timeout 150
Switch# show authentication interface GigabitEthernet 1
Interface GigabitEthernet 1
.....
  Common Timers
    Reauthenticate Period: 300
    Inactive   Timeout   :   300
    Quiet Period         : 300
  802.1x Parameters
    EAP Max Request      : 2
    EAP TX Period        : 30
    Supplicant Timeout   : 120
    Server Timeout       : 150
  Web-auth Parameters
    Login Attempt        : 3
```

dot1x timeout supp-timeout

Syntax

dot1x timeout supp-timeout *<1-65535>*
no dot1x timeout supp-timeout

Parameter

<1-65535>	Supplicant timeout period

Default

Default supplicant timeout is 30 seconds.

Mode

Interface Configuration

Usage

Use "**dot1x timeout supp-timeout**" command to configure the port supplicant timeout value. The supplicant timeout is the number of seconds that lapses before EAP requests are resent to the supplicant.
Use **no** form of this command to restore default value.

Example

The following example shows how to configure port 802.1x supplicant timeout.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# dot1x timeout supp-timeout 120
Switch# show authentication interface GigabitEthernet 1
Interface GigabitEthernet 1
.....
  Common Timers
    Reauthenticate Period: 300
    Inactive   Timeout   :   300
    Quiet Period         : 300
  802.1x Parameters
    EAP Max Request      : 2
    EAP TX Period        : 30
    Supplicant Timeout   : 120
```

```
    Server Timeout        : 30
  Web-auth Parameters
    Login Attempt         : 3
```

dot1x timeout tx-period

Syntax

dot1x timeout tx-period *<1-65535>*
no dot1x timeout tx-period

Parameter

<1-65535>	Supplicant timeout period

Default

Default EAP TX period is 30 seconds.

Mode

Interface Configuration

Usage

Use "**dot1x timeout tx-period**" command to configure the port 802.1x EAP TX period value. The TX period is the number of seconds that the device waits for a response to an Extensible Authentication Protocol (EAP) request/identity frame from the supplicant (client) before resending the request.
Use **no** form of this command to restore default value.

Example

The following example shows how to configure port 802.1x EAP TX period.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# dot1x timeout tx-period 10
```

```
Switch# show authentication interface GigabitEthernet 1
Interface GigabitEthernet 1
.....
  Common Timers
    Reauthenticate Period: 300
    Inactive  Timeout  :  300
    Quiet Period         : 300
  802.1x Parameters
    EAP Max Request      : 2
    EAP TX Period        : 10
    Supplicant Timeout   : 120
    Server Timeout       : 150
  Web-auth Parameters
    Login Attempt        : 3
```

show authentication

Syntax

show authentication
show authentication interfaces *IF_PORTS*

Parameter

interfaces	Interface status and configuration.
IF_PORTS	

Default No default value for this command.

Mode Privileged EXEC

Usage Use "**show authentication**" command to show all authentication manager configurations.
Use "**show authentication interface**" command to show authentication manager configuration of specific port.

Example This example shows how to show the mac authentication configurations of port fa1.

```
Switch# show authentication
Autentication dot1x state     : enabled
Autentication mac state       : disabled
Autentication web state       : disabled
Guest VLAN                     : disabled
Mac-auth Radius User ID Format: XXXXXXXXXXXX

Mac-auth Local Entry          :
                                                    Reauth     Inactive
MAC Address          Control           VLAN   Period     Timeout
-------------------- ------------- ------ ---------- ---------
00:11:22:33:44:55   Authorized        3      30000      123

Web-auth Local Entry          :
                                                      Reauth     Inactive
User Name                                 VLAN   Period     Timeout
--------------------------------- ------ ---------- ---------
acct1                                      5      12345      333

Interface Configurations

Interface GigabitEthernet 1
  Admin Control          : disable
  Host Mode              : multi-auth
  Type dot1x State       : disabled
  Type mac State         : disabled
  Type web State         : disabled
  Type Order             : dot1x
  MAC/WEB Method Order   : radius
  Guest VLAN             : disabled
  Reauthentication       : disabled
  Max Hosts              : 256
  VLAN Assign Mode       : static
  Common Timers
    Reauthenticate Period: 3600
    Inactive Timeout     : 60
    Quiet Period         : 60
  802.1x Parameters
    EAP Max Request      : 2
    EAP   TX   Period   :   30
    Supplicant  Timeout  :  30
    Server Timeout       : 30
  Web-auth Parameters
    Login Attempt        : 3
.....

Switch# show authentication interface GigabitEthernet 7
Interface Configurations

Interface GigabitEthernet 7
 Admin Control        : auto
 Host Mode            : multi-auth
 Type dot1x State     : enabled Type
```

```
mac State              : disabled Type
web State              : disabled Type
Order                  : dot1x
MAC/WEB Method Order : radius
Guest VLAN             : disabled
Reauthentication       : disabled  Max
Hosts                  256

Inactive Timeout       60
  Quiet Period         60
802.1x Parameters
  EAP Max Request      2
  EAP TX Period        30
  Supplicant Timeout   30
  Server Timeout       : 65535
Web-auth Parameters
  Login Attempt        : 3
```

show authentication sessions

Syntax

show authentication sessions [**detail**]
show authentication sessions interface *IF_PORTS*
show authentication sessions session-id *WORD*
show authentication session type (**dot1x**|**mac**|**web**)

Parameter

detail	Display session detail information.
interface	Interface status and configuration
IF_PORTS	port
session-id	Use session id to find specific session
type	Use authentication type to find sessions

Default

No default value for this command.

Mode

Privileged EXEC

Usage

Use "**show authentication sessions**" command to show authentication detail session information.

Example

This example shows how to show current authentication session brief and detail information.

```
Switch# show authentication sessions
Interface  MAC Address       Type    Status       Session ID
---------- ----------------- ------- ------------ ----------------
fa7        00:01:6C:CB:29:4A dot1x   Authorized   000000010000A028

Switch# show authentication sessions detail
Interface               : FastEthernet7
MAC Address             : 00:01:6C:CB:29:4A
Session ID              : 000000010000A028
Current Type            : dot1x
```

```
Status                    : Authorized
Authorized Information
  VLAN                    : 5 (from RADIUS)
  Reauthenticate Period: 301 (from RADIUS)
  Inactive Timeout        : 600 (from RADIUS)
Operational Information
  VLAN                    : 5
  Session Time            : 1143
  Inactive Time           : 168
  Quiet Time              : N/A
```

5. Diagnostic

show cable-diag

Syntax

show cable-diag interfaces *IF_NMLPORTS*

Parameter

IF_NMLPORTS	**Interface status and configuration media for an ID or a list of interfaces IDs.**

interface

Default

N/A

Mode

Privileged EXEC

Usage

To show the estimated copper cable length attached to a specific interface, use the command **show cable-diag** in the Privilegeg EXEC mode. For the proper information of the cable length, the interface must be active and linked up.

Example

The following example shows the result of cable diagnostic for the interface `gi1` and gi2.

```
Switch# show cable-diag interfaces GigabitEthernet 1-2
 Port    |  Speed | Local pair | Pair length | Pair
 status
--------+--------+------------+-------------+----------
-----
  gi1    |  auto  |    Pair A  |      0.88   | Open
                     Pair B  |      0.82   | Open
                     Pair C  |      0.80   | Open
                     Pair D  |      0.78   | Open

  gi2    |  auto  |    Pair A  |      0.81   | Open
                     Pair B  |      0.81   | Open
                     Pair C  |      0.77   | Open
                     Pair D  |      0.81   | Open
```

show fiber-transceiver

Syntax **show fiber-transceiver interfaces** *IF_NMLPORTS*

Parameter

interfaces
IF_NMLPORTS
Interface status and configuration transceiver for an interface ID or a list of interface IDs.

Default N/A

Mode Privileged EXEC

Usage To show the diagnostic information of the fiber transceiver use the command **show fiber-transceiver** in the Privilegeg EXEC mode.

Example The following example shows the diagnostic information for the interface gi1 and gi2, wherer the int fiber media ports with the transceiver inserted.

```
Switch# show  fiber-transceiver interfaces GigabitEthernet 1-
2
  Port    | Temperature  | Voltage     | Current     | Output power | Input
                                                    power |
        | [C]          | [Volt]      | [mA]        | [mWatt]      | [mWatt]     |
==========================================================================
==
gi1   | N/S    | N/S     | N/S     | N/S          | N/S          | Insert     |
gi2   | N/S    | N/S     | N/S     | N/S          | N/S          | Insert     |
```

```
 Temp          - Internally measured transceiver
 temperature Voltage    - Internally measured supply
 voltage
 Current       - Measured TX bias current
 Output Power - Measured TX output power in
 milliWatts Input Power      - Measured RX
 received power in milliWatts OE-Present  - SFP
 Presetn or Not Present
 LOS           - Loss of signal
 N/A - Not Available, N/S - Not Supported, W - Warning, E -
Error
```

6. DHCP Snooping

ip dhcp snooping

Syntax	**ip dhcp snooping** **no ip dhcp snooping**
Parameter	None
Default	DHCP snooping is disabled
Mode	Global Configuration
Usage	Use the ip dhcp snooping command to enable DHCP Snooping function. Use the no form of this command to disable.
Example	The example shows how to enable DHCP Snooping on VLAN 1. You can verify settings by the following show ip dhcp snooping command. switch(config)# ip dhcp snooping switch(config)# ip dhcp snooping vlan 1 switch# show ip dhcp snooping DHCP Snooping : enabled Enable on following Vlans 1 circuit-id default format : vlan-port remote-id : 00:11:22:33:44:55 (Switch Mac in Byte Order)

ip dhcp snooping vlan

Syntax	ip dhcp snooping vlan VLAN-LIST	
Parameter	**VLAN-LIST**	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
Default	Default is disabled on all VLANs	
Mode	Global Configuration	

Usage	Use the **ip dhcp snooping vlan** command to enable VLANs on DHCP Snooping function. Use the **no** form of this command to disable VLANs on DHCP Snooping function.
Example	The example shows how to enable VLAN 1-100 on DHCP Snooping, and then disable VLAN 30-40 on DHCP Snooping. You can verify settings by the following **show ip dhcp snooping** command.

```
switch(config)# vlan 1-100
switch((config-vlan)# exit
switch(config)# ip dhcp snooping
switch(config)# ip dhcp snooping vlan 1-100
switch# show ip dhcp snooping DHCP
Snooping                    : enabled
Enable on following Vlans    : 1-100
   circuit-id default format  : vlan-port
   remote-id:  00:11:22:33:44:55 (Switch Mac in Byte Order)

switch(config)# no ip dhcp snooping vlan 30-40
switch(config)# show ip dhcp snooping
DHCP Snooping           : enabled
Enable on following Vlans    : 1-29,41-100
   circuit-id default format  : vlan-port
   remote-id : 00:11:22:33:44:55 (Switch Mac in Byte Order)
```

ip dhcp snooping trust

Syntax	**ip dhcp snooping trust** **no ip dhcp snooping trust**
Parameter	None
Default	DHCP snooping trust is disabled
Mode	Interface Configuration
Usage	Use the **ip dhcp snooping trust** command to set trusted interface. The switch does not check DHCP packets that are received on the trusted interface; it simply forwards it. Use the **no** form of this command to set untrusted interface.
Example	The example shows how to set interface gi1 to trust. You can verify settings by the following **show ip dhcp snooping interface** command.

```
switch(config)# interface GigabitEthernet 1
switch(config-if)# ip dhcp snooping trust
switch(config-if)# do show ip dhcp snooping interface GigabitEthernet 1
```

```
Interfaces | Trust State | Rate (pps) | hwaddr Check | Insert Option82 |
-----------+--------------+------------+-----------------+-----------------+
 gi1       | Trusted      | None       | disabled        | disabled        |
```

ip dhcp snooping verify

Syntax

ip dhcp snooping verify mac-address [no]
ip dhcp snooping verify mac-address

Parameter

None

Default

DHCP snooping verify mac-address is disabled

Mode

Interface Configuration

Usage

Use the **ip dhcp snooping verify** command to verify MAC address function on interface.
The "**mac-address**" drop DHCP packets that chaddr and ethernet-source-mac is not match.

Example

The example shows how to set interface gi1 to validate "**mac-address"**. You can verify settings by the following **show ip dhcp snooping interface** command.

```
switch(config)# interface GigabitEthernet 1
switch(config-if)# ip dhcp snooping verify mac-address
switch(config-if)# do show ip dhcp snooping interface GigabitEthernet 1
Interfaces | Trust State | Rate (pps) | hwaddr Check | Insert Option82 |
-----------+--------------+------------+-----------------+-----------------+
 gi1       | Unrusted     | None       | disabled        | disabled        |
```

ip dhcp snooping rate-limit

Syntax

ip dhcp snooping rate-limit <1-300>
[no] ip dhcp snooping rate-limit

Parameter

<1-300>	Value 1-300 pps

Default

Default is un-limited of DHCP packet

Mode

Interface Configuration

Usage

Use the **ip dhcp snooping rate-limit** command to set rate limitation on interface. The switch drop DHCP packets after receives more than configured rate of packets per second. Use the **no** form of this command to return to default settings.

Example

The example shows how to set rate limit to 30 pps on interface gi1. You can verify settings by the following **show ip dhcp snooping interface** command.

```
switch(config)# interface GigabitEthernet 1
switch(config-if)# ip dhcp snooping rate-limit 30
switch(config-if)# do show ip dhcp snooping interfaces GigabitEthernet 1
Interfaces|Trust State|Rate (pps)|hwaddr Check|Insert Option82|
----------+-----------+----------+-----------+---------------+
 gi1      | Untrusted | 30       | disabled   | disabled      |
```

clear ip dhcp snooping statistics

Syntax

clear ip dhcp snooping interfaces IF_PORTS statistics

Parameter

GigabitEthernet	Gigabit ethernet interface to configure
LAG	IEEE 802.3 Link Aggregateion interface

Default

No default is defined

Mode

Privileged EXEC

Usage

Use the **clear ip dhcp snooping interfaces statistics** command to clear statistics that are recorded on interface.

Example

The example shows how to clear statistics on interface gi1. You can verify settings by the following **show ip dhcp snooping interface statistics** command.

```
switch# clear ip dhcp snooping interfaces GigabitEthernet 1 statistics
switch# show ip dhcp snooping interfaces GigabitEthernet 1 statistics
Interfaces | Forwarded | Chaddr Check Dropped | Untrust Port Dropped|
Untrust Port With Option82 Dropped | Invalid Drop
-------+-----------+-----------------+---------------------+-------------------------+--------
 gi1  | 0     | 0         | 0           | 0           | 0
```

show ip dhcp snooping

Syntax

show ip dhcp snooping

Parameter

None

Default

No default is defined

Mode

Privileged EXEC

Usage

Use the **show ip dhcp snooping** command to show settings of DHCP Snooping.

Example

The example shows how to show settings of DHCP Snooping

```
switch# show ip dhcp snooping DHCP
Snooping                    : enabled
Enable on following Vlans   : 1
   circuit-id default format: vlan-port
   remote-id:               : 00:11:22:33:44:55 (Switch Mac in Byte Order)
```

show ip dhcp snooping interface

Syntax

show ip dhcp snooping interfaces IF_PORTS
show ip dhcp snooping interfaces IF_PORTS statistics

Parameter

GigabitEthernet	Gigabit ethernet interface to configure
LAG	IEEE 802.3 Link Aggregateion interface

Default

No default is defined

Mode

Privileged EXEC

Usage

Use the **show ip dhcp snooping interfaces** command to show settings or statistics of interface.

Example

The example shows how to show settings of interface gi1.

```
switch# show ip dhcp snooping interface GigabitEthernet 1
Interfaces | Trust State | Rate (pps) | hwaddr Check | Insert Option82|
-----------+-------------+------------+------------------+----------------+
 gi1       | Untrusted   | None       | enabled          | disabled       |
```

The example shows how to show statistics of interface gi1.

switch# **show ip dhcp snooping interfaces GigabitEthernet 1 statistics**

```
Interfaces | Forwarded | Chaddr Check Dropped | Untrust Port Dropped| Untrust Port With
Option82 Dropped | Invalid Drop
-------+-----------+-----------------+----------------------+---------------------+--------
 gi1  | 0      | 0           | 0           | 0           | 0
```

show ip dhcp snooping binding

Syntax	**show ip dhcp snooping binding**
Parameter	**None**
Default	No default is defined
Mode	Privileged EXEC
Usage	Use the **show ip dhcp snooping binding** command to show binding entries that learned by DHCP Snooping.
Example	The example shows how to show binding entries that learned by DHCP Snooping.

switch# **show ip dhcp snooping binding**

```
Bind Table: Maximun Binding Entry Number 192
 Port | VID | MAC Address    |          IP          |    Type     | Lease Time
--------+------+--------------------+----------------------------------+---------------------+-----------
 fa1 |   1 | 48:5B:39:C7:12:62 | 192.168.1.100(255.255.255.255)|DHCP Snooping | 86400
```

ip dhcp snooping option

Syntax	**ip dhcp snooping option** **no ip dhcp snooping option**
Parameter	None
Default	DHCP snooping option82 is disabled
Mode	Interface Configuration
Usage	Use the **ip dhcp snooping option** command to enable that insert option82 content into packet. Use the **no** form of this command to disable.

Example The example shows how to enable option82 insertion. You can verify settings by the following **show ip dhcp snooping interface** command.

```
switch(config)# interface GigabitEthernet 1
switch(config-if)# ip dhcp snooping option
switch(config-if)# do show ip dhcp snooping interfaces GigabitEthernet 1
Interfaces | Trust State | Rate (pps) | hwaddr Check | Insert Option82 |
-----------+-------------+------------+------------------+-----------------+
 gi1       | Untrusted   | None       | disabled         | enabled         |
```

ip dhcp snooping option action

Syntax

ip dhcp snooping option action (drop|keep|replace)
no ip dhcp snooping option action

Parameter

Drop	Drop packets with option82
Keep	Keep original option82
Replace	Replace option82 content by switch setting

Default DHCP snooping option82 is drop

Mode Interface Configuration

Usage Use the **ip dhcp snooping option action** command to set the action when receive packets that with option82 content. Use the **no** form of this command to default setting.

Example The example shows how to set action to replace option82 content. You can verify settings by the following **show running-config** command.

```
switch(config)# interface GigabitEthernet 1
switch(config-if)# ip dhcp snooping option action replace
```

ip dhcp snooping option circuit-id

Syntax

ip dhcp snooping [vlan <1-4094>] option circuit-id STRING
no ip dhcp snooping [vlan <1-4094>] option circuit-id

Parameter

Vlan <1-4094>	VLAN configuration
STRING	ID string (1~63).

Default Default circuit-id is port id + vlan id in byte format.

Mode Interface Configuration

Usage	Use the **ip dhcp snooping option circuit-id** command to set user-defined circuit-id string. Circuit-id is per port per VLAN setting. If a VLAN is not found user-defined circuit-id then use per port circuit-id string. Use the **no** form of this command to default setting.
Example	The example shows how to set a user-defined circuit-id string on interface GigabitEthernet 1 and VLAN 1. You can verify settings by the following **show running-config** command switch(config)# **interface GigabitEthernet 1** switch(config-if)# **ip dhcp snooping vlan 1 option circuit-id test**

ip dhcp snooping option remote-id

Syntax	**ip dhcp snooping option remote-id STRING** **no ip dhcp snooping option remote-id**
Parameter	STRING ID string (1~63).
Default	Default remote-id is the switch MAC address in byte order
Mode	Global Configuration
Usage	Use the **ip dhcp snooping option remote-id** command to set user-defined remote-id string. Remote-id is a global and unique string. Use the **no** form of this command to default setting.
Example	The example shows how to set a user-defined remote-id string on switch. You can verify settings by the following **show ip dhcp snooping option remote-id** switch(config)# **ip dhcp snooping option remote-id test_remote** switch(config)# **do show ip dhcp snooping option remote-id** Remote ID: test_remote

show ip dhcp snooping option

Syntax	**show ip dhcp snooping option remote-id**
Parameter	**None**
Default	No default is defined

Mode	Privileged EXEC
Usage	Use the **show ip dhcp snooping option remote-id** command to show remote-id string.
Example	The example shows how to show remote-id string switch(config)# **do show ip dhcp snooping option remote-id** Remote ID: test_remote

ip dhcp snooping database

Syntax	**ip dhcp snooping database flash** **ip dhcp snooping database tftp (A.B.C.D|HOSTNAME) NAME** **no ip dhcp snooping database**

Parameter		
	(A.B.C.D|HOSTNAME)	IP Address of remote tftp server
	HOSTNAME	Hostname of remote tftp server

Default	DHCP snooping database is disabled
Mode	Global Configuration
Usage	Use the **ip dhcp snooping database** command to enable DHCP Snooping database agent. The "**flash**" means that write backup file to switch local drive. The "**tftp**" means that write backup file to remote TFTP server. Use the **no** form of this command to disable.
Example	The example shows how to enable DHCP Snooping database agent and write backup file to remote TFTP server with file name "backup_file". You can verify settings by the following **show ip dhcp snooping database** command. switch(config)# **ip dhcp snooping database tftp 192.168.1.50 backup_file** switch(config)# **do show ip dhcp snooping database** Type : tftp: 192.168.1.50 FileName : backup_file Write delay Timer : 300 seconds Abort Timer : 300 seconds Agent Running : Running Delay Timer Expiry : 300 seconds Abort Timer Expiry : 299

```
Last Succeded Time : None
Last Failed Time : None
Last Failed Reason : No failure recorded.

Total Attempts       :    1
Successful Transfers :    0   Failed Transfers :      0
Successful Reads     :    0   Failed Reads     :    0
Successful Writes    :    0   Failed Writes    :    0
```

ip dhcp snooping database write-delay

Syntax	**ip dhcp snooping database write-delay <15-86400>** **no ip dhcp snooping database write-delay**
Parameter	<15-86400> 15 ~ 86400 seconds
Default	DHCP snooping database write-delay is 300 seconds
Mode	Global Configuration
Usage	Use the **ip dhcp snooping database write-delay** command to modify the write-delay timer. Use the **no** form of this command to default setting.
Example	The example shows how to set write-delay timer to 60 seconds. You can verify settings by the following **show ip dhcp snooping database** command.

```
switch(config)# ip dhcp snooping database write-delay 60
switch(config)# do show ip dhcp snooping database
Type : tftp: 192.168.1.50
FileName : backup_file
Write delay Timer : 60 seconds
Abort Timer : 300 seconds

Agent Running : Running
Delay Timer Expiry : 300 seconds
Abort Timer Expiry : 299

Last Succeded Time : None
Last Failed Time : None
Last Failed Reason : No failure recorded.

Total Attempts       :    1
```

```
Successful Transfers :   0   Failed Transfers :      0
Successful Reads     :   0   Failed Reads     :   0
Successful Writes    :   0   Failed Writes    :   0
```

ip dhcp snooping database timeout

Syntax

ip dhcp snooping database timeout <0-86400>
no ip dhcp snooping database timeout

Parameter

<0-86400>	0 ~ 86400 seconds

Default

DHCP snooping database timeout is 300 seconds

Mode

Global Configuration

Usage

Use the **ip dhcp snooping database timeout** command to modify the timeout timer. Use the **no** form of this command to default setting.

Example

The example shows how to set timeout timer to 60 seconds. You can verify settings by the following **show ip dhcp snooping database** command.

```
switch(config)# ip dhcp snooping database timeout 60
switch(config)# do show ip dhcp snooping database
Type : tftp: 192.168.1.50
FileName : backup_file
Write delay Timer : 300 seconds
Abort Timer : 60 seconds

Agent Running : Running
Delay Timer Expiry : 300 seconds
Abort Timer Expiry : 299

Last Succeded Time : None
Last Failed Time : None
Last Failed Reason : No failure recorded.

Total Attempts       :   1
Successful Transfers :   0   Failed Transfers :      0
Successful Reads     :   0   Failed Reads     :   0
Successful Writes    :   0   Failed Writes    :   0
```

clear ip dhcp snooping database statistics

Syntax	**clear ip dhcp snooping database statistics**
Parameter	None
Default	No default is defined
Mode	Privileged EXEC
Usage	Use the **clear ip dhcp snooping database statistics** command to clear statistics of DHCP Snooping databae.
Example	The example shows how to clear statistics of DHCP Snooping agent. You can verify settings by the following **show ip dhcp snooping database** command.

```
switch# clear ip dhcp snooping database statistics
switch# show ip dhcp snooping database
Type : tftp: 192.168.1.50
FileName : backup_file
Write delay Timer : 300 seconds
Abort Timer : 60 seconds

Agent Running : Running
Delay Timer Expiry : 300 seconds
Abort Timer Expiry : 299

Last Succeded Time : None
Last Failed Time : None
Last Failed Reason : No failure recorded.

Total Attempts      :    0
Successful Transfers :    0   Failed Transfers :    0
Successful Reads    :    0   Failed Reads    :    0
Successful Writes   :    0   Failed Writes   :    0
```

renew ip dhcp snooping database

Syntax	**renew ip dhcp snooping database**
Parameter	None

Default	No default is defined
Mode	Privileged EXEC
Usage	Use the **renew ip dhcp snooping database** command to renew DHCP Snooping database from backup file.
Example	The example shows how to renew DHCP Snooping database. You can verify settings by the following **show ip dhcp snooping database** and **show ip dhcp snooping binding** command.

switch# **show ip dhcp snooping database**
Type : tftp: 192.168.1.50
FileName : backup_file
Write delay Timer : 300 seconds
Abort Timer : 60 seconds

Agent Running : Running
Delay Timer Expiry : 300 seconds
Abort Timer Expiry : 299

Last Succeded Time : None
Last Failed Time : None
Last Failed Reason : No failure recorded.

Total Attempts : 1
Successful Transfers : 1 Failed Transfers : 0
Successful Reads : 1 Failed Reads : 0
Successful Writes : 0 Failed Writes : 0

switch# **show ip dhcp snooping binding**
Bind Table: Maximun Binding Entry Number 192

Port	VID	MAC Address	IP	Type	Lease Time
gi1	1	48:5B:39:C7:12:62	192.168.1.100(255.255.255.255)	DHCP Snooping	86400

show ip dhcp snooping database

Syntax	**show ip dhcp snooping database**
Parameter	None
Default	No default is defined

Mode	Privileged EXEC
Usage	Use the **show ip dhcp snooping database** command to show settings of DHCP Snooping agent.
Example	The example shows how to show settings of DHCP Snooping agent. switch(config)# **show ip dhcp snooping database** Type : tftp: 192.168.1.50 FileName : backup_file Write delay Timer : 300 seconds Abort Timer : 60 seconds Agent Running : Running Delay Timer Expiry : 300 seconds Abort Timer Expiry : 299 Last Succeded Time : None Last Failed Time : None Last Failed Reason : No failure recorded. Total Attempts : 1 Successful Transfers : 1 Failed Transfers : 0 Successful Reads : 1 Failed Reads : 0 Successful Writes : 0 Failed Writes : 0

7. DoS

dos

Syntax	**dos** (**daeqsa-deny**|**icmp-frag-pkts-deny**|**icmpv4-ping-max-check**|**icmpv6-ping-max-check**|**ipv6-min-frag-size-check**|**land-deny**|**nullscan-deny**|**pod-deny**|**smurf-deny**|**syn-sportl1024-deny**|**synfin-deny**|**synrst-deny**|**tcp-frag-off-min-check**|**tcpblat-deny**|**tcphdr-min-check**|**udpblat-deny**|**xmas-deny**) **dos icmp-ping-max-length** *MAX_LEN* **dos ipv6-min-frag-size-length** *MIN_LEN* **dos smurf-netmask** *MASK* **dos tcphdr-min-length** *HDR_MIN_LEN* **no dos** (**tcp-frag-off-min-check**|**synrst-deny**|**synfin-deny**|**xma-deny**|**nullscan-deny**|**syn-sportl1024-deny**|**tcphdr-min-check**|smurf-deny|**icmpv6-ping-max-check**|**icmpv4-ping-max-check**|**icmp-frag-pkts-deny**|**ipv6-min-frag-size-check**|**pod-deny**|**tcpblat-**

deny|**udpblat-deny**|**land-deny**|**daeqsa-deny**)

Parameter		
	daeqsa-deny	Destination MAC equals to source MAC.
	icmp-frag-pkts- deny	Fragmented ICMP packets.
	icmpv4-ping-max-check	Check ICMPv4 ping maximum packets size
	icmpv6-ping-max-check	Check ICMPv6 ping maximum packets size
	ipv6-min-frag-size-check	Check minimum size of IPv6 fragments.

land-deny	Source IP equals to destination IP.
nullscan-deny	NULL Scan Attacks.
pod-deny	Ping of Death Attacks.
smurf-deny	Smurf Attacks.
syn-sportl1024- deny	**SYN packets with sport less than 1024.**
synfin-deny	SYN and FIN bits set in the packet.
synrst-deny	SYNC and RST bits set in the packet.
tcp-frag-off-min-check	**TCP fragment packet with offset equals to one.**
tcpblat-deny	Source TCP port equals to destination TCP port.
tcphdr-min-check	Check minimum TCP header.
udpblat-deny	Source UDP port equals to destination UDP portt.
xmas-deny	Xmascan: sequence number is zero and the FIN, URG and PSH bits are set.
icmp-ping-max- length	DoS information.
ipv6-min-frag- size-length	DoS information
smurf-netmask	DoS information
tcphdr-min-length	**DoS information**

Default

All of DoS protections are enabled by default.
The default parameter are:

- The maximum size of ICMP ping packages is 512 bytes
- The minimum size of IPv6 fragments is 1240 bytes.
- The Smurf netmask length is 0 bytes.
- The minimum TCP header length is 20 bytes.

Mode

Global Configuration

Usage

To enable the specific Deniel of Service (DoS) protection, use the command **dos** in the Global Configuration mode. Otherwise, use the **no** form of the command to disable the specific DoS protection.

Example

The following example sets the minimum fragment size to 1024 bytes, and enables the minimum size of IPv6 fragments validation.

```
Switch(config)# dos ipv6-min-frag-size-length 1024
Switch(config)# dos ipv6-min-frag-size-check
```

dos (interface)

Syntax

dos
no dos

Parameter

N/A

Default

DoS protection is disabled on each interface.

Mode Interface Configuration

Usage To enable the DoS on the specific interface, use the command **dos** in the Interface Configuration mode. Otherwise, use the **no** form of the command to disable the DoS on the interface.

Example The following example enables the DoS on the interface fa1.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# dos
```

show dos

Syntax **show dos**
show dos interface *IF_PORTS*

Parameter

interface *IF_PORTS*	Interface status and configuration.

Default N/A

Mode Privileged EXEC

Usage To show the DoS protection configuration, use the command **show dos** in the Privileged EXEC mode. For the status of DoS protection on each interface, use the command **show dos interface** in the Priveleged EXEC mode.

Example The following example shows the global DoS protection configuration.

```
Switch# show dos
  Type                         | State (Length)
-------------------------------+---------------------------------
  DMAC equal to SMAC           | enabled
  Land (DIP = SIP)             | enabled
  UDP Blat (DPORT = SPORT)     | enabled
  TCP Blat (DPORT = SPORT)     | enabled
  POD (Ping of Death)          | enabled
  IPv6 Min Fragment Size       | enabled  (1024 Bytes)
  ICMP Fragment Packets        | enabled
  IPv4 Ping Max Packet Size    | enabled  (512 Bytes)
  IPv6 Ping Max Packet Size    | enabled  (512 Bytes)
  Smurf Attack                 | enabled  (Netmask Length: 0)
  TCP Min Header Length        | enabled  (20 Bytes)
  TCP Syn (SPORT < 1024)       | enabled
  Null Scan Attack             | enabled
  X-Mas Scan Attack            | enabled
  TCP SYN-FIN Attack           | enabled
```

```
  TCP SYN-RST Attack          | enabled
  TCP Fragment (Offset = 1)   | enabled

Switch# show dos
```

The following example shows the status of DoS protection on the interface fa1.

```
Switch# show dos interfaces GigabitEthernet  1
Port       | DoS Protection
-----------+---------------
     gi1   |    disabled
```

8. Dynamic ARP Inspection

ip arp inspection

Syntax	**ip arp inspection** **no ip arp inspection**
Parameter	None
Default	Dynamic Arp inspection is disabled
Mode	Global Configuration
Usage	Use the **ip arp inspection** command to enable Dynamic Arp Inspection function. Use the **no** form of this command to disable.
Example	The example shows how to enable Dynamic Arp Inspection on VLAN 1. You can verify settings by the following **show ip arp inspection** command. switch(config)# **ip arp inspection** switch(config)# **ip arp inspection vlan 1** switch# **show ip arp inspection** Dynamic ARP Inspection: enabled Enable on Vlans 1

ip arp inspection vlan

Syntax	**ip arp inspection vlan VLAN-LIST** **no ip arp inspection vlan VLAN-LIST**	
Parameter	VLAN-LIST	Specify VLAN ID or a range of VLANs to enable or disable dynamic Arp inspection
Default	Default is disabled on all VLANs	

Mode Global Configuration

Usage Use the **ip arp inspection vlan** command to enable VLANs on Dynamic Arp Inspection function. Use the **no** form of this command to disable VLANs on Dynamic Arp Inspection function.

Example The example shows how to enable VLAN 1-100 on Dynamic Arp Inspection, and then disable VLAN 30-40 on Dynamic Arp Inspection. You can verify settings by the following **show ip arp inspection** command.

```
switch(config)# vlan 1-100
switch(config-vlan)# exit
switch(config)# ip arp inspection
switch(config)# ip arp inspection vlan 1-100
switch# show ip arp inspection Dynamic ARP
Inspection                    : enabled
Enable on Vlans          : 1-100

switch(config)# no ip arp inspection vlan 30-40
switch(config)# show ip arp inspection
Dynamic ARP Inspection     : enabled
Enable on Vlans          : 1-29,41-100
```

ip arp inspection trust

Syntax **ip arp inspection trus**
no ip arp inspection trust

Parameter None

Default Dynamic Arp inspection trust is disabled

Mode Interface Configuration

Usage Use the **ip arp inspection trust** command to set trusted interface. The switch does not check ARP packets that are received on the trusted interface; it simply forwards it. Use the **no** form of this command to set untrusted interface.

Example The example shows how to set interface gi1 to trust. You can verify settings by the following **show ip arp inspection interface** command.

```
switch(config)# interface GigabitEthernet 1
switchconfig-if)# ip arp inspection trust
switch(config-if)# do show ip arp inspection interface GigabitEthernet 1
Interfaces | Trust State | Rate (pps) | SMAC Check | DMAC Check | IP Check/Allow Zero
|
------------+--------------+--------------+----------------|-----------------+-------------------------+
 gi1     | Trusted    | None       | disabled    | disabled      | disabled/disabled
```

ip arp inspection validate

Syntax

ip arp inspection validate src-mac
ip arp inspection validate dst-mac
ip arp inspection validate ip [allow-zeros]
no ip arp inspection validate src-mac
no ip arp inspection validate dst-mac
no ip arp inspection validate ip [allow-zeros]

Parameter

None

Default

Default is disabled of all validation

Mode

Interface Configuration

Usage

Use the **ip arp inspection validate** command to enable validate function on interface. The "**src-mac**" drop ARP requests and reply packets that arp-sender-mac and ethernet-source-mac is not match. The "**dst-mac**" drops ARP reply packets that arp-target-mac and ethernet-dst-mac is not match. The "**ip**" drop ARP request and reply packets that sender-ip is invalid such as broadcast、multicast、all zero IP address and drop ARP reply packets that target-ip is invalid. The "**allow-zeros**" means won t drop all zero IP address. Use the **no** form of this command to disable validation.

Example

The example shows how to set interface gi1 to validate "**src-mac**"、 "**dst-mac**" and "**ip allow zeros**". You can verify settings by the following **show ip arp inspection interface** command.

```
switch(config)# interface GigabitEthernet 1
switch(config-if)# ip arp inspection validate src-mac
switch(config-if)# ip arp inspection validate dst-ma
switch(config-if)# ip arp inspection validate ip allow-zeros
switch(config)# do show ip arp inspection interface GigabitEthernet 1
Interfaces | Trust State | Rate (pps) | SMAC Check | DMAC Check | IP Check/Allow Zero
|
------------+--------------+--------------+----------------|-----------------+-------------------------+
 gi1     | Untrusted  | None       | enabled    | enabled      | enabled/ enabled
```

ip arp inspection rate-limit

Syntax

ip arp inspection rate-limit <1-50>
[no] ip arp inspection rate-limit

Parameter

<1-50>	Value 1-50 pps

Default

Default is un-limited of ARP packet

Mode Interface Configuration

Usage Use the **ip arp inspection rate-limit** command to set rate limitation on interface. The switch drop ARP packets after receives more than configured rate of packets per second. Use the **no** form of this command to return to default settings.

Example The example shows how to set rate limit to 30 pps on interface gi1. You can verify settings by the following **show ip arp inspection interface** command.

```
switch(config)# interface GigabitEthernet 1
switch(config)# ip arp inspection rate-limit 30
switch(config)# do show ip arp inspection interface GigabitEthernet 1
Interfaces | Trust State | Rate (pps) | SMAC Check | DMAC Check | IP Check/Allow Zero
|
------------+--------------+--------------+----------------|-----------------+-------------------------+
 gi1     | Untrusted  | 30         | disabled    | disabled      | disabled/disabled
```

clear ip arp inspection statistics

Syntax **clear ip arp inspection interfaces IF_PORTS statistics**

Parameter

GigabitEthernet	Gigabit ethernet interface to configure
LAG	IEEE 802.3 Link Aggregateion interface

Default No default is defined

Mode Privileged EXEC

Usage Use the **clear ip arp inspection interfaces statistics** command to clear statistics that are recorded on interface.

Example The example shows how to clear statistics on interface gi1. You can verify settings by the following **show ip arp inspection interface statistics** command.

```
switch# clear ip arp inspection interfaces GigabitEthernet 1
statistics
switch# show ip arp inspection interfaces GigabitEthernet 1
statistics
 Port| Forward |Source MAC Failures|Dest MAC Failures|
SIP Validation Failures|DIP Validation Failures|IP-MAC Mismatch Failures
----+---------+-------------+-------------+------------+--------------+-------------------
 gi1|     0 |       0 |        0 |         0 |         0 |         0
```

show ip arp inspection

Syntax **show ip dhcp snooping**

Parameter **None**

Default No default is defined

Mode Privileged EXEC

Usage Use the **show ip arp inspection** command to show settings of Dynamic Arp Inspection

Example The example shows how to show settings of Dynamic Arp Inspection

```
switch(config)# show ip arp inspection
Dynamic ARP Inspection: enabled Enable
on Vlans                1
```

show ip arp inspeciton interface

Syntax

show ip arp inspection interfaces IF_PORTS
show ip arp inspection interfaces IF_PORTS statistics

Parameter

GigabitEthernet	Gigabit ethernet interface to configure
LAG	IEEE 802.3 Link Aggregateion interface

Default No default is defined

Mode Privileged EXEC

Usage Use the **show ip arp inspection interfaces** command to show settings or statistics of interface.

Example The example shows how to show settings of interface GigabitEthernet 1.

```
switch# show ip arp inspection interface  GigabitEthernet 1
Interfaces | Trust State | Rate (pps) | SMAC Check | DMAC Check | IP Check/Allow Zero
|
------------+--------------+--------------+----------------|-----------------+-------------------------+
 gi1     | Trusted    | None       | disabled    | disabled      | disabled/disabled
```

The example shows how to show statistics of interface GigabitEthernet 1.

```
switch# show ip arp inspection interfaces  GigabitEthernet 1 statistics
Port| Forward |Source MAC Failures|Dest MAC Failures|
SIP Validation Failures|DIP Validation Failures|IP-MAC Mismatch Failures
----+---------+-------------+-------------+------------+--------------+-------------------
 gi1|     0 |       0 |        0 |         0 |         0 |         0
```

9. GVRP

gvrp (Global)

Syntax

gvrp
no gvrp

Parameter None

Default	GVRP is disabled
Mode	Global Configuration
Usage	Disable gvrp will clear all learned dynamic vlan entry and do not learn dynamic vlan anymore. Use 'show gvrp' to show configuration.
Example	The following example specifies that set global gvrp test. Switch(config)# **gvrp** Switch# **show gvrp**

```
        GVRP    Status
        --------------------

    GVRP                : Enabled
    Join time           : 200 ms
    Leave time          : 600 ms
    LeaveAll time       : 10000 ms
```

gvrp (Interface)

Syntax	**gvrp** **no gvrp**
Parameter	none
Default	GVRP is disabled on interface
Mode	Interface mode
Usage	'no gvrp' will remove dynamic port from vlan. 'gvrp' must work at port mode is trunk.
Example	The following example specifies that set port gvrp test. The port gvrp enable must set port mode is trunk firstly. Switch(config)#**interface GigabitEthernet 1** Switch(config-if)# **switchport mode trunk** Switch(config)#**gvrp** Switch# **show gvrp configuration interfaces GigabitEthernet 1** Port | GVRP-Status | Registration | Dynamic VLAN Creation --------+---------------+---------------+---------------------- gi1 Enabled Normal Disabled

gvrp registration-mode

Syntax	**gvrp registration-mode (normal | fixed | forbidden)**
Parameter	(normal | fixed | forbidden) normal: Normal mode. fixed: Fixed mode. forbidden: Forbidden mode.
Default	Default is Normal
Mode	Interface mode
Usage	When set registration-mode is fixed or forbidden, will remove the port from vlan witch is dynamic port. And do not learning vlan.
Example	The following example specifies that set gvrp registration mode test. Switch(config)# **interface GigabitEthernet 1** Switch(config-if)# **gvrp registration-mode fixed** Switch# **show gvrp configuration interfaces GigabitEthernet 1** Port | GVRP-Status | Registration | Dynamic VLAN Creation --------+--------------+--------------+--------------------- gi1 Enabled Fixed Disabled

gvrp vlan-create-forbid

Syntax	**gvrp vlan-creation-forbid** **no gvrp vlan-creation-forbid**
Parameter	none
Default	Default is disabled.
Mode	Interface mode
Usage	'gvrp vlan-creation-forbid' will not remove dynamic port from vlan immediate.
Example	The following example specifies that set port gvrp vlan-creation-forbid test. Switch(config)#**interface GigabitEthernet 1** Switch(config-if)# **gvrp vlan-creation-forbid** Switch(config-if)#**exit** Switch# **show gvrp configuration interfaces GigabitEthernet 1** Port | GVRP-Status | Registration | Dynamic VLAN Creation --------+--------------+--------------+--------------------- gi1 Enabled Normal Enabled

clear gvrp statistics

Syntax	**clear gvrp (error-statistics | statistics) [interfaces IF_PORTS]**
Parameter	(error-statistics | statistics) Error-statistics: GVRP Error Statistics info Statistics: GVRP Statistics info
Default	none
Mode	Privileged EXEC
Usage	This command will clear the ports error statistics or statistics info.
Example	The following example specifies that clear gvrp error statistics and statistics test. Switch# **clear gvrp statistics** Switch# **clear gvrp error-statistics**

show gvrp statistics

Syntax	**show gvrp (statistics | error-statistics) [interfaces IF_PORTS]**
Parameter	none Display all ports (statistics| error- statistics) configuration statistics – GVRP statistics error-statistics Gvrp Error Statistics GVRP configuration
Default	Display all ports statistics info
Mode	Privileged EXEC
Usage	This command will display the ports error statistics or statistics info.
Example	The following example specifies that display gvrp error statistics and statistics test. Switch# **show gvrp statistics** Port id : g i 1

```
Total RX       :    0
JoinEmpty RX   :    0
JoinIn RX      :    0
Empty RX       : 0
LeaveIn RX     : 0
LeaveEmpty RX  :    0
LeaveAll RX    :    0
Total TX       : 0
JoinEmpty TX   : 0
JoinIn TX      :    0
Empty TX       :    0
LeaveIn TX     :    0
LeaveEmpty TX  :    0
LeaveAll TX    :    0

Port id        : g i 2
Total RX       :    0
JoinEmpty RX   :    0
JoinIn RX      :    0
Empty RX       :    0
LeaveIn RX     :    0
LeaveEmpty RX  :    0
LeaveAll RX    :    0
Total TX       : 0
…

Switch# show gvrp error-statistics
INVPROT : Invalid protocoal Id
INVATYP : Invalid Attribute Type INVALEN : Invalid Attribute Length
INVAVAL : Invalid Attribute Value  INVEVENT: Invalid Event
  Port  | INVPROT | INVATYP | INVALEN | INVAVAL | INVEVENT
 gi1          0       0       0       0       0
 gi2          0       0       0       0       0
 gi3          0       0       0       0       0
 gi4          0       0       0       0       0
 gi5          0       0       0       0       0
 gi6          0       0       0       0       0
```

show gvrp

Syntax	**show gvrp**
Parameter	none

Default	None
Mode	Privileged EXEC
Usage	This command will display the gvrp global info.
Example	The following example specifies that display gvrp test. Switch# **show gvrp** GVRP Status ---------- GVRP : Disabled Join time : 200 ms Leave time : 600 ms LeaveAll time : 10000 ms

show gvrp configuration

Syntax	**show gvrp configuration [interface IF_PORTS]**

Parameter		
	none	Display all ports configuration
	[interfaces]	Interface status and configuration

Default	Display all ports configuration info
Mode	Privileged EXEC
Usage	This command will display the ports configuration info.
Example	The following example specifies that display gvrp port configuration test. Switch# **show gvrp configuration** Port | GVRP-Status | Registration | Dynamic VLAN Creation --------+--------------+--------------+--------------------- gi1 Disabled Normal Enabled gi 2 Disabled Normal Enabled

gi 3	Disabled	Normal	Enabled
gi 4	Disabled	Normal	Enabled
gi 5	Disabled	Normal	Enabled
gi 6	Disabled	Normal	Enabled
gi 7	Disabled	Normal	Enabled

--More—

10. IGMP Snooping

ip igmp snooping

Syntax	**ip igmp snooping** **no ip igmp snooping**
Parameter	None
Default	Default is enabled
Mode	Global Configuration
Usage	Use the **ip igmp snooping** command to enable IGMP snooping function. Use the **no** form of this command to disable. You can verify settings by the **show ip igmp snooping** command.
Example	The following example specifies that set ip igmp snooping test. Switch(config)# **no ip igmp snooping**

ip igmp snooping report-suppression

Syntax	**ip igmp snooping report-suppression** **no ip igmp snooping report-suppression**
Parameter	None
Default	Default is enabled
Mode	Global Configuration

Usage	Use the **ip igmp snooping report-suppression** command to enable IGMP snooping report-suppression function. Use the **no** form of this command to disable. Disable report-supression will forward all received reports to the vlan router ports. You can verify settings by the **show ip igmp snooping** command.

Example

The following example specifies that disable ip igmp snooping report-suppression test.

```
Switch# show ip igmp snooping
          IGMP Snooping Status
          --------------------

 Snooping                  : Disabled
 Report Suppression        : Enabled
 Operation Version         : v2
 Forward Method            : mac
 Unknown IP Multicast Action    : Flood

          Packet Statistics
 Total RX                  :  0
 Valid RX                  :  0
 Invalid RX                :  0
 Other RX                  :  0
 Leave RX                  :  0
 Report RX                 :  0
 General Query RX          :  0
 Specail Group Query RX    :  0
 Specail Group & Source Query RX  :  0
 Leave TX                  :  0
 Report TX                 :  0
 General Query TX          :  0
 Specail Group Query TX    :  0
 Specail Group & Source Query TX  :  0
```

ip igmp snooping version

Syntax	**ip igmp snooping version (2|3)**
Parameter	(2|3) 2 IGMP Operation Version is v2 3 IGMP Operation Version is v3
Default	Default is version 2
Mode	Global Configuration

Usage	Use the **ip igmp snooping version** command to change IGMP support version. Only basic mode is supported in v3. When change version from v3 to v2, all querier version will update to version 2. You can verify settings by the **show ip igmp snooping** command.
Example	The following example specifies that set ip igmp snooping version 3. Switch(config)# **ip igmp snooping version 3**

ip igmp snooping unknown-multicast action

Syntax	**ip igmp snooping unknown-multicast action (drop | flood |router-port)** **no ip igmp snooping unknown-multicast action**
Parameter	(drop | flood | router- port) — Drop、flood in vlan or forward to router port of unknown multicast packet
Default	Default is flood.
Mode	Global Configuratio
Usage	When igmp and mld snooping disabled, it can't set action router-port. When disable igmp snooping & mld snooping, it set unknown multicast action flood. When action is router-port to flood or drop, it will delete the unknown multicast group entry. Use the **ip igmp snooping unknown-multicast action** command to change action. Use the **no** form of this command to restore to default. You can verify settings by the **show ip igmp snooping** command.
Example	The following example specifies that set ip igmp unknown multicast action router-port test. Switch(config)# **ip igmp snooping** Switch(config)# **ip igmp snooping unknown-multicast action router-port**

ip igmp snooping querier

Syntax	**ip igmp snooping vlan <VLAN-LIST> querier [version (2|3)]** **no ip igmp snooping [vlan <VLAN-LIST>] querier**
Parameter	version — Querier Version configuration (2|3) — Query version 2 or 3
Default	No ip igmp snooping querier by default
Mode	Global Configuration

Usage	When enable ip igmp vlan querier, there will process router select, the select successful will send general and specific query. Use the **ip igmp snooping querier** command to add querier. Use the **no** form of this command to delete querier. You can verify settings by the **show ip igmp snooping querier** command.
Example	The following example specifies that set ip igmp snooping querier test. Switch(config)# **ip igmp snooping vlan 2 querier version 3**

ip igmp snooping vlan

Syntax	**ip igmp snooping vlan VLAN-LIST** **no ip igmp snooping vlan VLAN-LIST**
Parameter	VLAN-LIST — VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
Default	Default is disabled for all VLANs
Mode	Global Configuration
Usage	Disable will clear all ip igmp snooping dynamic group and dynamic router port and make all static ip igmp group invalid of this vlan. Will not learn dynamic group and router port by igmp message any more. Use the **ip igmp snooping vlan** command to enable IGMP on VLAN. Use the **no** form of this command to disable You can verify settings by the **show ip igmp snooping vlan** command.
Example	The following example specifies that set ip igmp snooping vlan test. Switch(config)# **ip igmp snooping** Switch(config)# **ip igmp snooping vlan 2**

ip igmp snooping vlan fastleave

Syntax	**ip igmp snooping vlan <VLAN-LIST> fastleave** **no ip igmp snooping vlan <VLAN-LIST> fastleave**

Parameter	VLAN-LIST	specifies VLAN ID list to set

Default Default is disabled

Mode Global Configuration

Usage Use the **ip igmp snooping vlan fastleave** command to enable fastleave function. Group will remove port immediately when receive leave packet.
Use the **no** form of this command to disable.
You can verify settings by the **show ip igmp snooping vlan** command

Example The following example specifies that set ip igmp snooping vlan **fastleave** test.
Switch(config)# **ip igmp snooping vlan 1 fastleave**

ip igmp snooping vlan last-member-query-count

Syntax **ip igmp snooping vlan <VLAN-LIST> last-member-query-count <1-7>**
no ip igmp snooping vlan <VLAN-LIST> last-member-query-count

Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
	last-member-query-count <1-7>	sLast Member Query Count.

Default Default is 2

Mode Global Configuration

Usage Use the **ip igmp snooping vlan last-member-query-count** command to change how many query packets will send.
Use the **no** form of this command to restore to default.
You can verify settings by the **show ip igmp snooping vlan** command

Example The following example specifies that set **ip igmp snooping vlan last-member-query-count** test.
Switch(config)# **ip igmp snooping vlan 1 last-member-query-count 5**

ip igmp snooping vlan last-member-query-interval

Syntax **ip igmp snooping vlan <VLAN-LIST> last-member-query-interval <1-60>**

no ip igmp snooping vlan <VLAN-LIST> last-member-query-interval

Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094.
	last-member-query-interval <1-60>	Last Member Query Interval
Default	Default is 1	
Mode	Global Configuration	
Usage	Use the **ip igmp snooping vlan last-member-query-interval** command to set interval between each query packet. Use the **no** form of this command to restore to default You can verify settings by the **show ip igmp snooping vlan** command	
Example	The following example specifies that set **ip igmp snooping vlan last-member-query-interval** test. Switch(config)# **ip igmp snooping vlan 1 last-member-query-interval 3**	

ip igmp snooping vlan query-interval

Syntax	**ip igmp snooping vlan <VLAN-LIST> query-interval <30-18000>** **no ip igmp snooping vlan <VLAN-LIST> query-interval**	
Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094.
	query-interval <30-18000>	Query Interval
Default	Default is 125	
Mode	Global Configuration	
Usage	Use the **ip igmp snooping vlan query-interval** command to set interval between each query. Use the **no** form of this command to restore to default You can verify settings by the **show ip igmp snooping vlan** command	
Example	The following example specifies that set **ip igmp snooping vlan query-interval** test. Switch(config)# **ip igmp snooping vlan 1 query-interval 100**	

ip igmp snooping vlan response-time

Syntax	**ip igmp snooping vlan <VLAN-LIST> response-time <5-20>** **no ip igmp snooping vlan <VLAN-LIST> response-time**	
Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094.
	response-time <5-20>	Response Time.
Default	Default is 10	
Mode	Global Configuration	
Usage	Use the **ip igmp snooping vlan response-time** command to set response time Use the **no** form of this command to restore to default. You can verify settings by the **show ip igmp snooping vlan** command	
Example	The following example specifies that set **ip igmp snooping vlan response-time** test. Switch(config)# **ip igmp snooping vlan 1 response-time 12**	

ip igmp snooping vlan robustness-variable

Syntax	**ip igmp snooping vlan <VLAN-LIST> robustness-variable <1-7>** **no ip igmp snooping vlan <VLAN-LIST> robustness-variable**	
Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
	robustness-variable <1-7>	Robustness Variable
Default	Default is 2	
Mode	Global Configuration	
Usage	Use the **ip igmp snooping vlan robustness-variable** command to times to retry.	

	Use the **no** form of this command to restore to default You can verify settings by the **show ip igmp snooping vlan** command
Example	The following example specifies that set ip igmp snooping vlan parameters test. Switch(config)# **ip igmp snooping vlan 1 robustness-variable**

ip igmp snooping vlan router

Syntax	**ip igmp snooping vlan VLAN-LIST router learn pim-dvmrp** **no ip igmp snooping vlan VLAN-LIST router learn pim-dvmrp**	
Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
Default	Default is enabled	
Mode	Global Configuration	
Usage	Use the **ip igmp snooping vlan router** command to enable learning router port by routing protocol packets such as PIM/PIMv2, DVMRP, MOSPF. Use the **no** form of this command to disable. You can verify settings by the **show ip igmp snooping vlan** command	
Example	The following example specifies that set **ip igmp snooping vlan router** test. Switch(config)# **ip igmp snooping vlan 99 router**	

ip igmp snooping vlan forbidden-port

Syntax	**ip igmp snooping vlan <VLAN-LIST> forbidden-port IF_PORTS no** **ip igmp snooping vlan <VLAN-LIST> forbidden-port IF_PORTS**	
Parameter	GigabitEthernet	Gigabit ethernet interface to configure
	LAG	IEEE 802.3 Link Aggregateion interface
Default	No forbidden ports by default	
Mode	Global Configuration	
Usage	'ip igmp snooping vlan 1 static-port gi1-2' will add static port gi1-2 for vlan 1.the all known vlan 1 ipv4 group will add the static ports.	

	'ip igmp snooping vlan 1 forbidden-port gi3-4' will add forbidden port gi3-4 for vlan 1.the all known vlan 1 ipv4 group will remove the forbidden ports. The configure can use 'show ip igmp snooping forward-all'. Use the **ip igmp snooping vlan forbidden-port** command to add static non-forwarding port, all known vlan 1 ipv4 group will remove the forbidden ports. Use the **no** form of this command to delete forbidden port. You can verify settings by the **show ip igmp snooping forward-all** command.
Example	The following example specifies that set ip igmp snooping static/forbidden port test. Switch(config)# **ip igmp snooping vlan 1 forbidden -port GigabitEthernet 3-4**

ip igmp snooping vlan static-port

Syntax	**ip igmp snooping vlan <VLAN-LIST> static-port IF_PORTS** **no ip igmp snooping vlan <VLAN-LIST> static-port IF_PORTS**

Parameter		
	GigabitEthernet	Gigabit ethernet interface to configure
	LAG	IEEE 802.3 Link Aggregateion interface

Default	No static port by default
Mode	Global Configuration
Usage	**Use the ip igmp snooping vlan static-port command to add static forwarding port, all known vlan 1 ipv4 group will add the static ports.** Use the **no** form of this command to delete static port. ou can verify settings by the **show ip igmp snooping forward-all**Comman.
Example	The following example specifies that set ip igmp snooping static port test. Switch(config)# **ip igmp snooping vlan 1 static -port GigabitEthernet 1-2**

ip igmp snooping vlan forbidden-router-port

Syntax	**ip igmp snooping vlan <VLAN-LIST> forbidden-router-port IF_PORTS** **no ip igmp snooping vlan <VLAN-LIST> forbidden-router-port IF_PORTS**

Parameter	GigabitEthernet	Gigabit ethernet interface to configure
	LAG	IEEE 802.3 Link Aggregateion interface

Default No forbidden router ports by default

Mode Global Configuration

Usage Use the **ip igmp snooping vlan forbidden-router-port** command to add static forbidden router port. This will also remove port from static router port. The forbidden router port will not forward received query packet .Use the **no** form of this command to delete forbidden router port. You can verify settings by the **show ip igmp snooping router** command.

Example The following example specifies that set ip igmp snooping forbidden test.
Switch(config)# **ip igmp snooping vlan 1 forbidden-router-port GigabitEthernet 2**

ip igmp snooping vlan static-router-port

Syntax **ip igmp snooping vlan <VLAN-LIST> static-router-port IF_PORTS**
no ip igmp snooping vlan <VLAN-LIST> static-router-port IF_PORTS

Parameter	GigabitEthernet	Gigabit ethernet interface to configure
	LAG	IEEE 802.3 Link Aggregateion interface

Default No static router ports by default

Mode Global Configuration

Usage Use the **ip igmp snooping vlan static-router-port** command to add static router port. All query packets will forward to this port.
Use the **no** form of this command to delete static router port.
You can verify settings by the **show ip igmp snooping router** command.

Example The following example specifies that set ip igmp snooping static test.
Switch(config)# **ip igmp snooping vlan 1 static-router-port gi1-2**

ip igmp snooping vlan static-group

Syntax **ip igmp snooping vlan <VLAN-LIST> static-group [<ip-addr>] interfaces**

	IF_PORTS **no ip igmp snooping vlan <VLAN-LIST> static-group <ip-addr> interfaces IF_PORTS**	
Parameter	VLAN-LIST	specifies VLAN ID list to set
	A.B.C.D	IPV4 multicast address
	GigabitEthernet	Gigabit ethernet interface to configure
	LAG	IEEE 802.3 Link Aggregateion interface
Default	No static group by default	
Mode	Global Configuration	
Usage	Use the **ip igmp snooping vlan static-group** command to add a static group. The static group will not learn other dynamic ports. If the dynamic group exists, then the static group will overlap the dynamic group. The static group set to valid unless igmp snooping global and vlan enable. Use the **no** form of this command to delete a port in static group. If remove the last member of static group, the static group will be delete. You can verify settings by the **show ip igmp snooping group** command.	
Example	The following example specifies that set ip igmp snooping static group test. Switch(config)# **ip igmp snooping vlan 1 static-group 224.1.1.1 interfaces gi1-2**	

ip igmp snooping vlan group

Syntax	**no ip igmp snooping vlan <VLAN-LIST> group <ip-addr>**	
Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
Default	None	
Mode	Global Configuration	
Usage	Use the **no ip igmp snooping vlan group** command to delete a group which could be static or dynamic. You can verify settings by the **show ip igmp snooping group** command.	
Example	The following example specifies that set ip igmp snooping static group test.	

Switch(config)# **no ip igmp snooping vlan 1 group 224.1.1.1**

profile range

Syntax	**profile range ip <ip-addr> [ip-addr] action (permit | deny)**

Parameter		
	<ip-addr>	Start ipv4 multicast address
	A.B.C.D	IPv4 multicast address end
	(permit | deny)	Permit: Action permit deny: Action deny

Default	None
Mode	igmp profile configuration mode
Usage	Use the **profile** command to generate IGMP profile. You can verify settings by the **show ip igmp profile** command
Example	The following example specifies that set ip igmp profile test. Switch(config)# **ip igmp profile 1** Switch(config-igmp-profile)# **profile range ip 224.1.1.1 224.1.1.8 action permit**

ip igmp profile

Syntax	**ip igmp profile <1-128>** **no ip igmp profile <1-128>**

Parameter	<1-128>	specifies profile ID

Default	No profie exist by default
Mode	Global Configuration
Usage	Use the **ip igmp profile** command to enter profile configuration Use the **no** form of this command to delete profile You can verify settings by the **show ip igmp profile** command
Example	The following example specifies that set ip igmp profile test.

Switch(config)# **ip igmp profile 1**

ip igmp filter

Syntax	**ip igmp filter <1-128>** **[no] ip igmp filter**
Parameter	<1-128> specifies profile ID
Default	None
Mode	Port Configuration
Usage	Use the **ip igmp filter** command to bind a profile for port. When the port bind a profile. Then the port learning group will update, if the group is not match the profile rule it will remove the port from the group. Static group is excluded. Use the **no** form of this command to delete profile You can verify settings by the **show ip igmp filter** command
Example	The following example specifies that set ip igmp filter test. Switch(config)# **interface GigabitEthernet 1** Switch(config-if)#**ip igmp filter 1**

ip igmp max-groups

Syntax	**ip igmp max-groups <0-1024>** **no ip igmp max-groups**
Parameter	<0-256> IGMP snooping max group number 0~256.
Default	Default is 256
Mode	Port Configuration

Usage	Use the **ip igmp max-groups** command to limit port learning max group number. When the port has reach limitation, new group will not add this port. Static group is excluded. Use the **no** form of this command to restore to default You can verify settings by the **show ip igmp max-groups** command.
Example	The following example specifies that set ip igmp max-groups test. Switch(config-if)#**ip igmp max-groups 10**

ip igmp max-groups action

Syntax	**ip igmp max-groups action (deny | replace)**

Parameter	(deny | replace)	Deny: IGMP max-group action deny Replace: IGMP max-group action replace

Default	Default action is deny
Mode	Port Configuration
Usage	Use the **ip igmp max-groups action** command to set the action when the numbers of groups reach the limitation. Use the **no** form of this command to restore to default You can verify settings by the **show ip igmp max-groups** command.
Example	The following example specifies that set action replace test. Switch(config-if)#**ip igmp max-groups action replace**

clear ip igmp snooping groups

Syntax	**clear ip igmp snooping groups [(dynamic | static)]**

Parameter	none	Clear ip igmp groups include dynamic and static
	(dynamic | static)	Ip igmp group type is dynamic or static

Default	None

Mode	Privileged EXEC
Usage	This command will clear the ip igmp groups for dynamic or static or all of type. You can verify settings by the **show ip igmp snooping groups** command.
Example	The following example specifies that clear ip igmp snooping groups test. Switch# **clear ip igmp snooping groups** Switch# **show ip igmp snooping groups** VLAN | Group IP Address | Type | Life(Sec) | Port ------+-----------------+--------+-----------+----------------- Total Number of Entry = 0

clear ip igmp snooping statistics

Syntax	**clear ip igmp snooping statistics**
Parameter	none
Default	None
Mode	Privileged EXEC
Usage	This command will clear the igmp statistics. You can verify settings by the **show ip igmp snooping** command.
Example	The following example specifies that clear ip igmp snooping statistics test. Switch# **clear ip igmp snooping statistics** Switch# **show ip igmp snooping** IGMP Snooping Status --- Snooping : Enabled Report Suppression : Enabled Operation Version : v2 Forward Method : mac Unknown IP Multicast Action : Flood Packet Statistics Total RX : 0 Valid RX : 0

```
Invalid RX                  : 0
Other RX                    : 0
Leave RX                    : 0
Report RX                   : 0
General Query RX            : 0
Specail Group Query RX      : 0
Specail Group & Source Query RX : 0
Leave TX                    : 0
Report TX                   : 0
General Query TX            : 0
Specail Group Query TX      : 0
Specail Group & Source Query TX : 0
```

show ip igmp snooping groups counters

Syntax	**show ip igmp snooping groups**
Parameter	none
Default	none
Mode	Privileged EXEC
Usage	This command will display the ip igmp group counter include static group.
Example	The following example specifies that display ip igmp snooping group counter test. Switch# **show ip igmp snooping group counters** Total ip igmp snooping group number: 2 Total ip igmp snooping static mac number: 0

show ip igmp snooping groups

Syntax	**show ip igmp snooping groups [(dynamic | static)]**

Parameter		
	none	Show ip igmp groups include dynamic and static
	(dynamic | static)	Display Ip igmp group type is dynamic or static

Default	None

Mode	Privileged EXEC
Usage	This command will display the ip igmp groups for dynamic or static or all of type.
Example	The following example specifies that show ip igmp snooping groups. Switch# **show ip igmp snooping groups** VLAN | Group IP Address | Type | Life(Sec) | Port ------+-----------------+--------+-----------+----------------- 1 | 224.1.2.3 | Static| -- | gi9 1 | 224.1.2.4 | Static| -- | gi10 Total Number of Entry = 2

show ip igmp snooping router

Syntax	**show ip igmp snooping router [(dynamic | forbidden |static)]**
Parameter	none — Show ip igmp router include dynamic and static and forbidden (dynamic | forbidden | static) — Display Ip igmp router info for different type
Default	None
Mode	Privileged EXEC
Usage	This command will display the ip igmp router info.
Example	The following example specifies that show ip igmp snooping router. Switch# **show ip igmp snooping router** Dynamic Router Table VID | Port | Expiry Time(Sec) ------+---------+----------------- Total Entry 0 Static Router Table VID | Port Mask ------+---------------------- 1 | gi4

Total Entry 1

Forbidden Router Table VID | Port Mask
------+----------
1 | gi8

Total Entry 1

show ip igmp snooping querier

Syntax	**show ip igmp snooping querier**
Parameter	none Show all vlan ip igmp querier info.
Default	None
Mode	Privileged EXEC
Usage	This command will display all of the static vlan ip igmp querier info.
Example	The following example specifies that show ip igmp snooping querier test. Switch# **show ip igmp snooping querier** VID | State | Status | Version | Querier IP -------+-----------+-----------+-----------+-------------------- 1 | Disabled | Non-Querier | No | ------ Total Entry 1

show ip igmp snooping

Syntax	**show ip igmp snooping**
Parameter	None
Default	None
Mode	Privileged EXEC

Usage	This command will display ip igmp snooping global info.

Example

The following example specifies that show ip igmp snooping test.

```
Switch# show ip igmp snooping
            IGMP Snooping Status
            --------------------

  Snooping                  : Enabled
  Report Suppression        : Enabled
  Operation Version         : v2
  Forward Method            : mac
  Unknown Multicast Action  : Flood

            Packet Statistics
  Total RX                  :  0
  Valid RX                  :  0
  Invalid RX                :  0
  Other RX                  :  0
  Leave RX                  :  0
  Report RX                 :  0
  General Query RX          :  0
  Specail Group Query RX    :  0
  Specail Group & Source Query RX :  0
  Leave TX                  :  0
  Report TX                 :  0
  General Query TX          :  0
  Specail Group Query TX    :  0
  Specail Group & Source Query TX  :  0
```

show ip igmp snooping vlan

Syntax	**show ip igmp snooping vlan [VLAN-LIST]**

Parameter		
	none	Show all ip igmp snooping vlan info
	[VLAN-LIST]	Show specifies vlan ip igmp snooping info

Default	None
Mode	Privileged EXEC
Usage	This command will display ip igmp snooping vlan info.

Example	The following example specifies that show ip igmp snooping vlan test. Switch# **show ip igmp snooping vlan 1** IGMP Snooping is globaly enabled IGMP Snooping VLAN 1 admin : disabled IGMP Snooping operation mode : disabled IGMP Snooping robustness: admin 2 oper 2 IGMP Snooping query interval: admin 125 sec oper 125 sec IGMP Snooping query max response : admin 10 sec oper 10 sec IGMP Snooping last member query counter: admin 2 oper 2 IGMP Snooping last member query interval: admin 1 sec oper 1 sec IGMP Snooping last immediate leave: disabled IGMP Snooping automatic learning of multicast router ports: enabled

show ip igmp snooping forward-all

Syntax	**show ip igmp snooping forward-all [vlan VLAN-LIST]**

Parameter		
	none	Show all ip igmp snooping vlan forward-all info
	[vlan VLAN-LIST]	Show specifies vlan of ip igmp forward info.

Default	None
Mode	Privileged EXEC
Usage	This command will display ip igmp snooping forward all info.
Example	The following example specifies that show ip igmp snooping forward-all test. Switch# **show ip igmp snooping forward-all 1** IGMP Snooping VLAN 1 IGMP Snooping static port : None IGMP Snooping forbidden port : None

show ip igmp profile

Syntax	**show ip igmp profile [<1-128>]**

Parameter		
	none	Show all ip igmp snooping profile info
	[<1-128>]	Show specifies index profile info

Default	None
Mode	Privileged EXEC

Usage	This command will display ip igmp profile info.

Example

```
The following example specifies that show ip igmp profile test.
Switch# show ip igmp profile
IP igmp profile index: 1
IP igmp profile action: permit
Range low ip: 224.1.1.1
Range high ip: 224.1.1.8

IP igmp profile index: 2
IP igmp profile action: deny
Range low ip: 225.1.1.0
Range high ip: 225.1.2.1
```

show ip igmp filter

Syntax	**show ip igmp filter [interfaces IF_PORTS]**

Parameter		
	none	Show all port filter
	[interfaces IF_PORTS]	Show specifies ports filter

Default	None
Mode	Privileged EXEC
Usage	This command will display ip igmp port filter info.

Example

```
The following example specifies that show ip igmp filter test.
Switch# show ip igmp filter
Port ID | Profile ID
---------+--------------
    gi1 : 1
    gi2 : None
    gi3 : None
    gi4 : None
    gi5 : None
--More--
```

show ip igmp max-group

Syntax	**show ip igmp max-group [interfaces IF_PORTS]**

Parameter	none	Show all port max-group
	[interfaces IF_PORTS]	Show specifies ports max-group
Default	None	
Mode	Privileged EXEC	
Usage	This command will display ip igmp port max-group.	
Example	The following example specifies that show ip igmp max-group test. Switch(config-if)#**ip igmp max-groups 50** Switch# **show ip igmp max-group** Port ID | Max Group ---------+-------------- gi1 : 50 gi2 : 256 gi3 : 256 gi4 : 256 gi5 : 256 --More--	

show ip igmp max-group action

Syntax	**show ip igmp max-group action [interfaces IF_PORTS]**	
Parameter	none	Show all port max-group action
	[interfaces IF_PORTS]	Show specifies ports max-group action
Default	None	
Mode	Privileged EXEC	
Usage	This command will display ip igmp port max-group action.	

Example The following example specifies that show ip igmp max-group action test.

```
Switch(config)#interface gi1
Switch(config-if)#ip igmp max-groups action replace
Switch# show ip igmp max-group action
Port ID | Max-groups  Action
---------+--------------------
    gi1 : replace
    gi2 : deny
    gi3 : deny
    gi4 : deny
    gi5 : deny
--More--
```

11. IP Source Guard

ip source verify

Syntax

ip source verify [mac-and-ip]
no ip source verify

Parameter

mac-and-ip	Source mac and ip mode

Default

IP Source Guard is disabled on interface. Default is that verifying ip address only

Mode

Port Configuration

Usage

Use the **ip source verify** command to enable IP Source Guard function.
Default IP Source Guard filter source IP address. The "**mac-and-ip**" filters not only source IP address but also source MAC address.
Use the **no** form of this command to disable.
You can verify settings by the **show ip source interfaces** command.

Example

The example shows how to enable IP Source Guard with source IP address filtering on interface gi1.

```
Switch(config)# interface GigabitEthernet 1
switch(config-if)# ip source verify
```

The example shows how to enable IP Source Guard with source IP and MAC address filtering on interface gi2.

```
Switch(config)# interface GigabitEthernet  2
switch(config-if)# ip source verify mac-and-ip
```

```
switch(config-if)# do show ip source interfaces gi1-2
Port |     Status      | Max Entry | Current Entry
-----------+---------------------+-------------+---------------
   gi1 | Verify MAC+IP | No Limit |  0
   gi2 |       disabled  | No Limit  |   0
```

.

ip source binding

Syntax	**ip source binding A:B:C:D:E:F vlan <1-4094> A.B.C.D interface IF_PORT** **no ip source binding A:B:C:D:E:F vlan <1-4094> A.B.C.D interface IF_PORT**

Parameter		
	A:B:C:D:E:F	MAC address xx:xx:xx:xx:xx:xx
	VLAN <1-4094>	VLAN configuration
	A.B.C.D	IP address.
	GigabitEthernet	Gigabit ethernet interface to configure.
	LAG	IEEE 802.3 Link Aggregateion interface

Default	Default is no binding entry.
Mode	Global Configuration
Usage	Use the **ip source binding** command to create a static IP source binding entry has an IP address, its associated MAC address、VLAN ID、interface. Use the **no** form of this command to delete static entry. You can verify settings by the **show ip source binding** command.

Example

The example shows how to add a static IP source binding entry.

```
Switch(config)# ip source binding 00:11:22:33:44:55 vlan 1 192.168.1.55 interface fa1
switch(config)# do show ip source binding
Bind Table: Maximun Binding Entry Number 192
Port | VID | MAC Address |     IP              | Type  | Lease Time
----+------+-------------------+-------------------------------------+------------+-----------
gi1  |1 | 00:11:22:33:44:55  |192.168.1.55(255.255.255.255)|  Static  | NA
```

show ip source interface

Syntax	**show ip source interfaces IF_PORTS**

Parameter		
	GigabitEthernet	Gigabit ethernet interface to configure
	LAG	IEEE 802.3 Link Aggregateion interface

Default	No default is defined
Mode	Privileged EXEC

Usage	Use the **show ip source interface** command to show settings of IP Source Guard of interface

Example	The example shows how to show settings of IP Source Guard of interface gi1

```
switch# show ip source interfaces GigabitEthernet 1
  Port  |  Status          | Max Entry  | Current Entry
----------+------------------------+--------------+---------------
    gi1 |  Verify MAC+IP  | No Limit   |   0
```

show ip source binding

Syntax	**show ip source binding [(dynamic|static)]**

Parameter	**dynamic**	Show entries that added by DHCP snooping learn
	static	Show entries that added by user

Default	No default is defined

Mode	Privileged EXEC

Usage	Use the **show ip source binding** command to show binding entries of IP Source Guard.

Example The example shows how to show static binding entries of IP Source Guard.

```
switch# show ip source binding
Bind Table: Maximun Binding Entry Number 192
 Port | VID | MAC Address |     IP              | Type  |  Lease Time
----+------+-------------------+-------------------------------------+-------------+-----------
gi1  |1 | 00:11:22:33:44:55  |192.168.1.55(255.255.255.255)|  Static  | NA
```

12. Link Aggregation

lag

Syntax	**lag** *<1-8>* **mode (static | active | passive) no lag**

Parameter	*<1-8>*	LAG number
	static	Enable Static Only.

	active	Enable LACP unconditionally.
	passive	Enable LACP only if a LACP device is detected

Default There is no LAG in default.

Mode Interface Configuration

Usage Link aggregation group function allows you to aggregate multiple physical ports into one logic port to increase bandwidth. This command makes normal port join into the specific LAG logic port with static or dynamic mode. And use "**no lag**" to leave the LAG logic port.

Example This example shows how to create a dynamic LAG and join fa1-fa3 to this LAG.

```
Switch(config)# interface range GigabitEthernet 1-3
Switch(config-if-range)# lag 1 mode active
```

This example shows how to show current LAG status.

```
Switch# show lag
Load Balancing: src-dst-mac-ip.

Group ID | Type |   Ports
---------+--------+------------------------------
1        |        LACP  |  Inactive: gi1-3 2      | ------ |
3        | ------ |
4        | ------ |
5        | ------ |
6        | ------ |
7        | ------ |
8        | ------ |
```

lag load-balance

Syntax **lag load-balance (src-dst-mac | src-dst-mac-ip)**
no lag load-balance

Parameter	**src-dst-mac**	LAG load balancing is based on source and destination MAC addr.
	src-dst-mac-ip	LAG load balancing is based on source and destination of MAC and IP addresses

Default Default load balance algorithm is src-dst-mac

Mode Global Configuration

Usage

Link aggregation group port should transmit packets spread to all ports to balance traffic loading. There are two algorithm supported and this command allow you to select the algorithm.

Example

This example shows how to change load balance algorithm to src-dst-mac-ip.

```
Switch(config)# lag load-balance src-dst-mac-ip
```

This example shows how to show current load balance algorithm.

```
Switch# show lag
Load Balancing: src-dst-mac-ip.

 Group ID |    Type  |          Ports
----------+----------+-------------------------
1         |----------|
2         |----------|
3         |----------|
4         |----------|
5         |----------|
6         |----------|
7         |----------|
8         |----------|
```

lacp port-priority

Syntax

lacp port-priority *<1-65535>*
no lacp port-priority

Parameter

<1-65535>	Port-priority value

Default

Default port priority is 1.

Mode

Interface Configuration

Usage

LACP port priority is used for two connected DUT to select aggregation ports. Lower port priority value has higher priority. And the port with higher priority will be selected into LAG first.

The only way to show this configuration is using "**show running-config**" command.

Example

This example shows how to configure interface fa1 lacp port priority to 100.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# lacp port-priority 100
```

lacp system-priority

Syntax	**lacp system-priority** *<1-65535>* **no lacp system-priority**
Parameter	*<1-65535>* lacp system-priority
Default	Default system priority is 32768.
Mode	Global Configuration
Usage	LACP system priority is used for two connected DUT to select master switch. Lower system priority value has higher priority. And the DUT with higher priority can decide which ports are able to join the LAG. Use "**no lacp system-priority**" to restore to the default priority value. The only way to show this configuration is using "**show running-config**" command.
Example	This example shows how to configure lacp system priority to 1000. `Switch(config)# lacp system-priority 1000`

lacp timeout

Syntax	**lacp timeout (long | short)** **no lacp timeout**
Parameter	**long** Long timeout value. **short** Short timeout value.
Default	Default LACP timeout is long.
Mode	Interface Configuration
Usage	LACP need to send LACP packet to partner switch to check the link status. This command configure the interval of sending LACP packets. The only way to show this configuration is using "**show running-config**" command.
Example	This example shows how to configure interface fa1 lacp timeout to short.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# lacp timeout short
```

show lacp

Syntax

show lacp sys-id
show lacp [<*1-8*>] **counters**
show lacp [<*1-8*>] (**internal** | **neighbor**) [**detail**]

Parameter

Default

No default values for this command.

Mode

Privileged EXEC

Usage

Use "**show lacp sys-id**" command to displays the system identifier that is being used by LACP. The system identifier is made up of the LAPC system priority and the switch MAC address.

Use "**show lacp counter**" command to display LACP statistic information.

Use "**show lacp internal**" command to display local information.

Use "**show lacp neighbor**" command to display remote information.

State of the specific port. These are the allowed values:

- **-**—Port is in an unknown state.
- **bndl**—Port is attached to an aggregator and bundled with other ports.
- **susp**—Port is in a suspended state; it is not attached to any aggregator.
- **hot-sby**—Port is in a hot-standby state.
- **1indiv**—Port is incapable of bundling with any other port.
- **1indep**—Port is in an independent state (not bundled but able to switch data traffic. In this case, LACP is not running on the partner port).
- **down**—Port is down.

State variables for the port, encoded as individual bits within a single octet with these meanings:

- bit0—LACP_Activity
- bit1—LACP_Timeout
- bit2—Aggregation
- bit3—Synchronization
- bit4—Collecting
- bit5—Distributing
- bit6—Defaulted
- bit7—Expired

Example

This example shows how to show LACP statistics.

```
Switch# show lacp counters
              LACPDUs         LACPDUs
Port        Sent    Recv      Pkts Err
---------------------------------------
Channel group 1
fa1         0       0         0
fa2         0       0         0
```

This example shows how to show LACP local information.

```
Switch# show lacp internal
Flags:  S - Device is requesting Slow LACPDUs
        F - Device is requesting Fast LACPDUs
        A - Device is in Active mode        P - Device is in
Passive mode

Channel group 1
Port         Port              LACP port    Admin  Oper
Port       Flags    State      Priority       Key        Key
Number       State
fa1        SA       down       1              0x3e8      0x3e8
0x1          0x45
fa2        SA       down       1              0x3e8      0x3e8
0x2          0x45
```

This example shows how to show LACP remote information.

```
Switch# show lacp neighbor
Flags:  S - Device is sending Slow LACPDUs
        F - Device is sending Fast LACPDUs
        A - Device is in Active mode        P - Device is in
Passive mode

Channel group 1 neighbors

Partner's information:
```

```
                  LACP port                          Admin   Oper
Port    Port
Port      Flags    Priority  Dev ID           Age     key     Key
Number  State
Gi1         FP       32768     0000.0000.0000  0s      0x3e8
0x3e8   0x1      0x56
Gi2         FP       32768     0000.0000.0000  0s      0x3e8
0x3e8   0x2      0x56
```

show lag

Syntax

show lag

Parameter

Default

No default values for this command.

Mode	Privileged EXEC
Usage	Use "**show lag**" command to show current LAG load balance algorithm and members active/inactive status.

Example	This example shows how to show current LAG status.
	`Switch# show lag`
	`Load Balancing: src-dst-mac-ip.`

```
Group ID |  Type |      Ports
---------+-------+--------------------
1        |       LACP  |  Inactive: gi1-3 2      | ------ |
3        | ------ |
4        | ------ |
5        | ------ |
6        | ------ |
7        | ------ |
8        | ------ |
```

13. LLDP

clear lldp statistics

Syntax	**clear lldp global statistics**
Default	There is no default configuration for this command
Mode	Privileged EXEC
Usage	Use "**clear lldp statistics**" command to clear the LLDP RX/TX statistics.
Example	This example shows how to clear LLDP statistics. Switch# **clear lldp global statistics**

lldp

Syntax	**lldp** **no lldp**
Default	Default is enabled
Mode	Global Configuration
Usage	Use "**lldp**" command to enable LLDP RX/TX ability. The LLDP enable status is displayed by "**show lldp**" command. Use the **no** form of this command to disable the LLDP. When LLDP is disabled, the behavior of receiving LLDP PDU would be decided by "**lldp lldpdu**" command.
Example	The following example sets LLDP enable/disable.

```
Switch (config)# lldp
Switch# show lldp

 State: Enabled
 Timer: 30 Seconds
 Hold multiplier: 4
 Reinit delay: 2 Seconds
 Tx delay: 2 Seconds
 LLDP packet handling: Flooding

Port      |  State | Optional TLVs   | Address
 -------- + ------ + --------------- + --------
      fa1 |  RX,TX |                 |192.168.1.2
      fa2 |  RX,TX |                 |192.168.1.2
      fa3 |  RX,TX |                 |192.168.1.2
      fa4 |  RX,TX |                 |192.168.1.2
      fa5 |  RX,TX |                 |192.168.1.2
```

lldp rx

Syntax	**lldp rx** **no lldp rx**
Default	Default is enabled
Mode	Port Configuration
Usage	Use "**lldp rx**" command to enable the LLDP PDU RX ability. The configuration could be shown by "**show lldp**" command. Use the **no** form of this command to disable the RX ability.
Example	This example sets port gi1 to enable LLDP TX, port gi2 to disable RX but

enable TX, port gi3 to enable RX but disable TX, port gi4 to disable RX and TX.

```
Switch(config)# interface GigabitEthernet  1
Switch(config-if)# lldp rx
Switch(config-if)# lldp tx
Switch(config)# interface GigabitEthernet  2
Switch(config-if)# no lldp rx
Switch(config-if)# lldp tx
Switch(config)# interface GigabitEthernet 3
Switch(config-if)# lldp rx Switch(config-if)# no lldp tx
Switch(config)# interface GigabitEthernet 4
Switch(config-if)# no lldp rx
Switch(config-if)# no lldp tx
Switch(config-if)# end
Switch# show lldp interfaces GigabitEthernet  1-4

 State: Enabled
 Timer: 30 Seconds
 Hold multiplier: 4
 Reinit delay: 2 Seconds
 Tx delay: 2 Seconds
 LLDP packet handling: Bridging

 Port      |  State | Optional TLVs   | Address
 -------- + ------ + -------------- + -------- gi1
      |      RX,TX |                 |192.168.1.254
      gi2 |     TX |                 |192.168.1.254
      gi3 |     RX |                 |192.168.1.254
      gi4 |Disable |                 |192.168.1.254
```

lldp tx-interval

Syntax

lldp tx-interval *<5-32768>*
no lldp tx-interval

Parameter

<5-32768>	Rate at which LLDP packets are sent (in sec).

Default

Default TX interval is 30 seconds

Mode

Global Configuration

Usage

Use "**lldp tx-interval**" command to configure the LLDP TX interval. It should be noticed that both "**lldp tx-interval**" and "**lldp tx-delay**" affects the LLDP PDU TX time. The larger value of the two configurations decides the TX interval. The configuration could be shown by "**show lldp**" command.

Use the **no** form of this command to restore the interval to default value.

Example

This example sets LLDP TX interval to 10 seconds.

```
Switch(config)# lldp tx-interval 10
Switch# show lldp
 State: Disabled
 Timer: 10 Seconds
 Hold multiplier: 4
 Reinit delay: 2 Seconds
 Tx delay: 2 Seconds
 LLDP packet handling: Flooding
```

lldp reinit-delay

Syntax	**lldp reinit-delay** *<1-10>* **no lldp reinit-delay**
Parameter	*<1-10>* Specify the delay (in secs) for LLDP to initialize
Default	Default reinital delay is 2 seconds
Mode	Global Configuration
Usage	Use "**lldp reinit-delay**" to configure the LLDP re-initial delay. This delay avoids LLDP generate too many PDU if the port is up and down frequently. The delay starts to count when the port links down. The port would not generate LLDP PDU until the delay counts to zero. The configuration could be shown by "show lldp" command. Use the **no** form of this command to restore the delay to default value.
Example	This example sets LLDP re-initial delay to 5 seconds.

```
Switch(config)# lldp reinit-delay 5
Switch# show lldp

 State: Disabled
 Timer: 10 Seconds
 Hold multiplier: 4
 Reinit delay: 5 Seconds
 Tx delay: 2 Seconds
 LLDP packet handling: Flooding
```

lldp holdtime-multiplier

Syntax	**lldp holdtime-multiplier** *<2-10>* **no holdtime-multiplier**
Parameter	<2-10> Multiplier used for calculating the LLDP discovery packet hold time
Default	lldp holdtime-multiplier 4

Mode	Global Configuration
Usage	Use "**lldp holdtime-multiplier**" command to configure the LLDP PDU hold multiplier that decides time-to-live (TTL) value sent in LLDP advertisements: TTL = (tx-interval * holdtime-multiplier). The configuration could be shown by "**show lldp**" command. Use the **no** form of this command to restore the multiplier to default value.

Example	This example sets LLDP hold time multiplier to 3.
	
	`Switch(config)# lldp holdtime-multiplier 3`
	`Switch# show lldp`
	
	`State: Disabled`
	`Timer: 10 Seconds`
	`Hold multiplier: 3`
	`Reinit delay: 2 Seconds`
	`Tx delay: 2 Seconds`
	`LLDP packet handling: Flooding`

lldp lldpdu

Syntax	**lldp lldpdu (filtering|flooding|bridging)**	
Parameter	**bridging**	Bridging LLDP PDU to VLAN member ports
	filtering	Drop LLDP PDU.
	flooding	Flooding LLDP PDU to all ports (VLAN unawared)
Default	Default LLDP PDU handling behavior when LLDP disabled is flooding	
Mode	Global Configuration	
Usage	Use "**lldp lldpdu**" command to configure the LLDP PDU handling behavior when LLDP is globally disabled. It should be noticed that if LLDP is globally enabled and per port LLDP RX status is configured to disabled, the received LLDP PDU would be dropped instead of taking the global disable behavior. The configuration could be shown by "**show lldp**" command. Use the **no** form of this command to restore the behavior to default.	
Example	This example sets LLDP disable action to bridging.	

```
Switch(config)# lldp lldpdu bridging
Switch# show lldp

 State: Enabled
 Timer: 30 Seconds
 Hold multiplier: 4
 Reinit delay: 2 Seconds
 Tx delay: 2 Seconds
 LLDP packet handling: Bridging
```

lldp med

Syntax

lldp med no
lldp med

Default

lldp med

Mode

Port Configuration

Usage

Use "**lldp med**" to configure the LLDP MED enable status. If LLDP MED is enabled, LLDP MED capability TLV and other selected MED TLV would be attached. The configuration could be shown by "show lldp med" command.

Use the **no** form of this command to disable the LLDP MED status.

Example

This example sets port gi1 to enable LLDP MED, port gi2 to disable LLDP MED.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# lldp med
Switch(config)# interface GigabitEthernet 2
Switch(config-if)# no lldp med
Switch# show lldp interfaces GigabitEthernet 1-2 med

 Port    | Capabilities   | Network Policy | Location |
Inventory
 ------ + -------------- + -------------- + -------- + --------
--
    gi1 |            Yes |            Yes |       No |
No
    gi2 |             No |            Yes |       No |
No
```

lldp med fast-start-repeat-count

Syntax

lldp med fast-start-repeat-count <*1-10*>
no lldp med fast-start-repeat-count

Parameter	*<1-10>*	Fast start repeat count, range is 1-10.

Default Default fast start TX repeat count is 3

Mode Global Configuration

Usage Use "**lldp med fast-start-repeat-count**" command to configure the LLDP PDU fast start TX repeat count. When port links up, it will send LLDP PDU immediately to notify link partner. The number of LLDP PDU sends when it links up depends on fast-start-repeat-count configuration. The LLDP PDU fast-start transmits in interval of one second. The fast start behavior works no matter LLDP MED is enabled or not. The configuration could be shown by "**show lldp med**" command.

Use the **no** form of this command to restore count to default.

Example This example sets fast start repeat count to 10.

```
Switch(config)# lldp med fast-start-repeat-count 10
Switch# show lldp med

 Fast Start Repeat Count: 10
 lldp med network-policy voice: auto
```

lldp med location

Syntax **lldp med location (coordination|civic-address|ecs-elin)** *ADDR*
no lldp med location (coordination|civic-address|ecs-elin)

Parameter	**coordination**	The location is specified as coordinates. Range: 16 hexadecimal bytes exactly.
	civic-address	The location is specified as civic address. Range: 6 to 160 hexadecimal bytes.
	ecs-elin	The location is specified as ECS ELIN. Range: 10 to 25 hexadecimal bytes.
	ADDR	Specify the location data. Input format is hexadecimal values without colon (for example: 1234AB). For coordination location type, the length of ADDR is 16 bytes. For civic-address, the length is 6 to 160 bytes. For ecs-elin, the length is 10 to 25 bytes.

Default Deafult is no location data.

Mode Port Configuration

Usage

Use "**lldp med location**" command to configure the LLDP MED location data. The "coordinate", "civic-address", "ecs-elin" locations are independent, so at most three location TLVs could be sent if their data are not empty. The configuration of location could be shown by "**show lldp interface PORT med**" command.

Use the **no** form of this command to clear location data.

Example

This example sets location data for interface gi1.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# lldp med location coordinate
112233445566778899AABBCCDDEEFF00
Switch(config-if)# lldp med location civic-address
112233445566
Switch(config-if)# lldp med location ecs-elin
1122334455667788 99AA
Switch# show lldp interfaces gi1 med

 Port    | Capabilities   | Network Policy | Location |
Inventory
 ------ + ------------- + -------------- + -------- + --------
--
    gi1 |           Yes |            Yes |      Yes |
Yes

Port ID: gi1
Network policies: 1, 32
Location:
Coordinates: 112233445566778899AABBCCDDEEFF00
Civic-address: 112233445566
Ecs-elin: 1122334455667788 99AA
```

lldp med network-policy

Syntax

lldp med network-policy *<1-32>* **app (voice|voice-signaling|guest-voice|guest-voice-signaling|softphone-voice|video-conferencing|streaming-video|video-signaling) vlan** *<1-4094>* **vlan-type (tag|untag) priority** *<0-7>* **dscp** *<0-63>*

no lldp med network-policy *<1-32>*

Parameter

<1-32>	Network policy index
voice **voice-signaling** **guest-voice** **guest-voice-signaling** **softphone-voice** **video-**	Voice.

	conferencing **streaming-video** **video-signaling**	
	<1-4094>	Specify the VLAN ID
	tag untag	Specify the VLAN tag status
	<0-7>	Specify the L2 priority
	<0-63>	Specify the DSCP value

Default No network policy is defined

Mode Global Configuration

Usage Use "**lldp med network-policy**" command to configure the LLDP MED network policy table and add a network policy entry that can be bind to ports. If LLDP MED network policy voice auto mode is enabled, "voice" type network policy can not be created since it is in auto mode. The network policy table configuration could be shown by "**show lldp med**" command.

Use the **no** form of this command to remove network policy entry of specific index. A network policy can be removed only when it is not bind to any port.

Example This example create 2 network policies.

```
Switch(config)# lldp med network-policy 1 app voice-signaling
vlan 2 vlan-type tag priority 3 dscp 4
Switch(config)# lldp med network-policy 32 app video-
conferencing vlan 5 vlan-type tag priority 1 dscp 63
Switch# show lldp med

 Fast Start Repeat Count: 10
 lldp med network-policy voice: auto

Network policy 1
------------------
Application type: Voice Signaling
VLAN ID: 2 tagged
Layer 2 priority: 3
DSCP: 4

Network policy 32
------------------
Application type: Conferencing
VLAN ID: 5 tagged
Layer 2 priority: 1
DSCP: 63
```

lldp med network-policy (Interface)

Syntax **lldp med network-policy (add|remove)** *<1-32>*

Parameter	**add**	Add network policy to port binding.
	remove	Remove network policy to port binding.
	<1-32>	Specify the network policy index

Default Default is no network policy binding to port.

Mode Port Configuration

Usage Use "**lldp med network-policy**" command to bind the network policy to port interface. The binded network policy of one port should be with different types. If network policy TLV is selected over a port, the binded network policies would be attached in LLDP MED PDU. The configuration of network policy binding could be shown by "show lldp med" command.

Example This example binds network policy for interface GigabitEthernet 1 and GigabitEthernet 2.

```
Switch# show lldp med

lldp med network-policy voice auto

Syntax **lldp med network-policy voice auto**
no lldp med network-policy voice auto

Default lldp med network-policy auto

Mode Global Configuration

Usage

Use "**lldp med network-policy voice auto**" command to enable network policy voice auto mode. In voice auto mode, if network-policy TLV is selected, a voice type network policy would be attached to PDU that contents comes from voice VLAN configuration. This works for voice VLAN module to exchange voice VLAN information with link partner. If voice auto mode is enabled, user can not manually create an voice type network policy; if an voice type network policy is created, the voice auto mode can not be enabled. The configuration of network policy auto mode could be shown by "**show lldp med**" command.

Use the **no** form of this command to disable voice auto mode.

Example

This example sets network policy auto mode to enable and then disable.

```
Switch (config)# lldp med network-policy auto
Switch# show lldp med

 Fast Start Repeat Count: 10
 lldp med network-policy voice: auto

Switch (config)# no lldp med network-policy auto
Switch# show lldp med

 Fast Start Repeat Count: 10
 lldp med network-policy voice: manual
```

lldp med tlv-select

Syntax

lldp med tlv-select *MEDTLV* [*MEDTLV*] [*MEDTLV*] [*MEDTLV*]
no lldp med tlv-select

Parameter

MEDTLV	LLDP MED optional TLV (network-policy, location, inventory, poe-pse)

Default

network-policy TLV

Mode

Port Configuration@

Usage

Use "**lldp med tlv-select**" command to configure the LLDP MED TLV selection. It should be noticed that even no MED TLV is selected, MED capability TLV would be attached if LLDP MED is enable. The configuration could be shown by "show lldp med" command.

Use the **no** form of this command to remove all selected MED TLV over the dedicated ports.

Example

This example sets port gi1-2 to select LLDP MED network policy, location, POE-PSE, inventory TLVs, and it sets port gi3-4 to un-select all LLDP MED TLVs.

```
Switch(config)# interface gi1
```

```
Switch(config-if)# lldp med tlv-select network-policy location
inventory
Switch(config)# interface gi2
Switch(config-if)# no lldp med tlv-select
Switch# show lldp interfaces gi1-2 med

 Port    | Capabilities  | Network Policy | Location |
Inventory
 ------ + ------------- + -------------- + -------- + --------
--
```

```
Yes No

gi1 |      Yes | Yes | Yes |

 gi2 |          Yes |      No |     No |
```

lldp tlv-select

Syntax	**lldp tlv-select** *TLV* [*TLV*] [*TLV*] [*TLV*] [*TLV*] [*TLV*] [*TLV*][*TLV*] **no lldp tlv-select**
Parameter	TLV — Specify the selected optional TLV. Available optional TLVs are : sys-name (system name), sys-desc (system description), sys-cap (system capability), mac-phy (802.3 MAC-PHY), lag (802.3 link aggregation), max-frame-size (802.3 max frame size), and management-addr (management address).
Default	Default is no selected optional TLV.
Mode	Port Configuration
Usage	Use “lldp tlv-select” command to attach selected TLV in PDU. The configuration could be shown by “show lldp” command. Use the **no** form of this command to remove all selected TLV.
Example	This example selects system name, system description, system capability, 802.3 MAC-PHY, 802.3 link aggregation, 802.3 max frame size, and management address TLVs for interface gi1 and gi3.

```
Switch(config)# interface range gi 1,3
Switch(config-if-range)# lldp tlv-select port-desc sys-name
sys-desc sys-cap mac-phy lag max-frame-size management-addr
Switch(config-if-range)# end
Switch# show lldp interfaces gi1,3

 State: Disabled
 Timer: 10 Seconds
 Hold multiplier: 3
 Reinit delay: 2 Seconds
 Tx delay: 2 Seconds
 LLDP packet handling: Flooding

 Port      |  State | Optional TLVs   | Address

frame-size, management-addr
802.1 optional TLVs
PVID: Enabled
```

```
Port ID: gi3
802.3 optional TLVs: 802.3-mac-phy, 802.3-lag, 802.3-max-
frame-size, management-addr
802.1 optional TLVs
PVID: Enabled
```

lldp tlv-select pvid

Syntax

lldp tlv-select pvid (disable|enable)
no lldp tlv-select pvid

Parameter

disable	Disable Tx optional-TLV 802.1 PVID
enable	Enable Tx optional-TLV 802.1 PVID

Default

Default is enabled

Mode

Port Configuration

Usage

Use "**lldp tlv-select pvid**" command to configure the 802.1 PVID TLV attach enable status. The configuration could be shown by "**show lldp**" command.

Use the **no** form of this command to restore the pvid to default value.

Example

This example sets port gi1 PVID TLV attaches status to disable and port gi2 to enable.

```
Switch(config)# interface gi1
Switch(config-if)# lldp tlv-select pvid disable
Switch(config-if)# interface gi2
Switch(config-if)# lldp tlv-select pvid enable

Switch# show lldp interfaces gi1,gi2

 State: Disabled
 Timer: 10 Seconds
 Hold multiplier: 3

802.1 optional TLVs
PVID: Enabled
```

lldp tlv-select vlan-name

Syntax	**lldp tlv-select vlan-name (add|remove)** *VLAN-LIST*
Parameter	**add** Specify which VLAN to add to the port.
Default	Default is no VLAN added.
Mode	Port Configuration
Usage	Use "**lldp tlv-select vlan-name**" command to add or remove VLAN list for 802.1 VLAN-NAME TLV. The configuration could be shown by "**show lldp**" command.
Example	This example add VLAN 100 to VLAN-NAME TLV for port gi10.

```
Switch(config)# vlan 100
Switch(config-vlan)# exit
Switch(config)# interface gi1
Switch(config-if)# switchport trunk allowed vlan add all
Switch(config-if)# lldp tlv-select vlan-name add 100
Switch(config-if)# end

Switch# show lldp interfaces gi1

 State: Enabled
 Timer: 30 Seconds
 Hold multiplier: 4
 Reinit delay: 2 Seconds
 Tx delay: 2 Seconds

 Port      |  State | Optional TLVs   | Address
 -------- + ------ + -------------- + --------
      gi1 |  RX,TX |                 |192.168.1.2

Port ID: gi1
802.3 optional TLVs:
802.1 optional TLVs
PVID: Enabled
VLANs: 100
```

lldp tx

Syntax

lldp tx
no lldp tx

Default

Default is enabled

Mode

Port Configuration

Usage

Use "**lldp tx**" command to enable the LLDP PDU TX ability. The configuration could be shown by "**show lldp**" command.

Use the **no** form of this command to disable the TX ability.

Example

This example sets port gi1 to enable LLDP TX, port gi2 to disable RX but enable TX, port gi3 to enable RX but disable TX, port gi4 to disable RX and TX.

```
Switch(config)# interface gi1
Switch(config-if)# lldp rx
Switch(config-if)# lldp tx
Switch(config)# interface gi2
Switch(config-if)# no lldp rx
Switch(config-if)# lldp tx
Switch(config)# interface gi3
Switch(config-if)# lldp rx
Switch(config-if)# no lldp tx
Switch(config)# interface gi4
Switch(config-if)# no lldp rx
Switch(config-if)# no lldp tx
Switch(config-if)# end
Switch# show lldp interfaces gi1-4

 State: Enabled
 Timer: 30 Seconds
 Hold multiplier: 4
 Reinit delay: 2 Seconds
 Tx delay: 2 Seconds
 LLDP packet handling: Bridging

 Port      |  State | Optional TLVs  | Address
 -------- + ------ + -------------- + -------- gi1
      |      RX,TX |                |192.168.1.254
      gi2 |     TX |                |192.168.1.254
      gi3 |     RX |                |192.168.1.254
      gi4 |Disable |                |192.168.1.254
```

lldp tx-delay

Syntax

lldp tx-delay *<1-8192>*
no lldp tx-delay

Parameter

<1-8192>	LLDP Tx-delay time in seconds.

Default	Default TX delay is 2 seconds
Mode	Global Configuration
Usage	Use "**lldp tx-delay**" command to configure the delay in seconds between successive LLDP frame transmissions. The delay starts to count in any case LLDP PDU is sent such as by LLDP PDU advertise routine, LLDP PDU content change, port link up, etc. The configuration could be shown by "**show lldp**" command. Use the **no** form of this command to restore the delay to default value.
Example	This example sets LLDP PDU TX delay to 10 seconds.

```
Switch(config)# lldp tx-delay 10
Switch# show lldp

 State: Disabled
 Timer: 10 Seconds
 Hold multiplier: 4
 Reinit delay: 2 Seconds
 Tx delay: 10 Seconds
 LLDP packet handling: Flooding
```

show lldp

Syntax	**show lldp** **show lldp interface** *IF_NMLPORTS*
Parameter	*IF_NMLPORTS* Specify the ports to display information
Default	This command has no default value.
Mode	Privileged EXEC
Usage	Use "**show lldp**" and "**show lldp interface**" commands to display LLDP global information including LLDP enable status, LLDP PDU TX interval, hold time multiplier, re-initial delay, TX delay, and LLDP packet handling when LLDP is disabled. The per port information displayed includes port LLDP RX/TX enable status, selected TLV to TX and IP address. The abbreviations in optional TLVs are: port description (PD), system name (SN), system description (SD), and system capability (SC).

Example This example displays lldp information of port gi1 and gi2

```
Switch# show lldp interfaces gi1,gi2
 State: Disabled
 Timer: 30 Seconds
 Hold multiplier: 4
 Reinit delay: 2 Seconds
 Tx delay: 2 Seconds
 LLDP packet handling: Flooding

 Port      |  State | Optional TLVs   | Address
 --------- + ------ + --------------- + --------- gi1
      |       RX,TX | PD, SN, SD, SC |192.168.1.254
      gi1 |  RX,TX |                  |192.168.1.254

Port ID: gi1
802.3 optional TLVs: 802.3-mac-phy, 802.3-lag, 802.3-max-
frame-size, management-addr
802.1 optional TLVs
PVID: Enabled

Port ID: gi2
802.3 optional TLVs:
802.1 optional TLVs
PVID: Enabled
```

show lldp local-device

Syntax

show lldp local-device
show lldp interfaces *IF_NMLPORTS* **local-device**

Parameter

IF_NMLPORTS	Specify the ports to display information

Default There is no default configuration for this command

Mode Privileged EXEC

Usage Use "**show lldp local-device**" command to show the local configuration of LLDP PDU. By the commands, a user can view the contents of LLDP/ LLDP-MED TLVs that would be attached in LLDP PDU.

Example This example displays the local device information.

```
Switch# show lldp local-device
LLDP Local Device Information:
 Chassis Type : Mac Address
 Chassis ID   : 00:12:12:12:12:12
 System Name  : Switch121212
 System Description  :
 System Capabilities Support : Bridge
 System Capabilities Enable  : Bridge
 Management Address : 192.168.1.254(IPv4)
```

```
Switch121212(config)# show lldp interfaces gi1 local-device

show lldp neighbor

Syntax

show lldp neighbor
show lldp interfaces *IF_NMLPORTS* **neighbor**

Parameter

IF_NMLPORTS	Specify the ports to display information

Default

There is no default configuration for this command

Mode

Privileged EXEC

Usage

Use "**show lldp neighbor**" command to display the received neighbor LLDP PDU information. When LLDP PDU is received on LLDP RX enable ports, system would store the PDU information in database until time to live of the PDU counts down to zero.

Example

This example displays the neighbor information.

```
Switch# show lldp neighbor

 Port |   Device ID       |     Port ID      |      SysName
|  Capabilities   |  TTL

show lldp statistics

Syntax

show lldp statistics
show lldp interfaces *IF_NMLPORTS* **statistics**

Parameter

IF_NMLPORTS	Specify the ports to display information

Default

There is no default configuration for this command

Mode

Privileged EXEC

Usage

Use "**show lldp statistics**" command to display the LLDP RX/TX statistics.

Example

This example display the LLDP statistics.

```
Switch# show lldp statistics

LLDP Global Statistics:
Insertions : 3
Deletions  : 0
Drops      : 0
```

```
Age Outs    : 1

0 |         0
```

```
Switch121212(config)# show lldp interfaces gi1 statistics

LLDP Port Statistics:
         | TX Frames |          RX Frames           |           RX
TLVs          | RX Ageouts
  Port   |    Total    | Total | Discarded | Errors | Discarded |
Unrecognized |    Total
--------+-----------+-------+-----------+--------+-----------
+--------------+----------
    gi1 |         51 |      0 |          0 |       0 |          0 |
0 |         0
```

show lldp tlv-overloading

Syntax

show lldp interfaces *IF_NMLPORTS* **tlvs-overloading**

Parameter

IF_NMLPORTS	Specify the ports to display information

Default

There is no default configuration for this command

Mode

Privileged EXEC

Usage

The LLDP PDU is composed by TLVs and selected number TLVs may compose a large PDU that the system can not handle. The maximum PDU length is to take the smaller number of jumbo frame size minus 30 bytes (30 bytes kept for header) or 1488 bytes.

Use "**show lldp tlv-overloading**" command to display the length of LLDP TLVs and if the TLVs overload the PDU length. The TLVs with status marked "overload" would not be transmitted.

Example

This example display the LLDP TLVs overloading status of port gi1.

```
Switch# show lldp interfaces gi1 tlvs-overloading

gi1:

          TLVs Group           |  Bytes   |      Status
  ---------------------------- + ------- + ----------------
                     Mandatory |       21 |    Transmitted
         LLDP-MED Capabilities |        9 |    Transmitted
             LLDP-MED Location |       53 |    Transmitted
    LLDP-MED Network Policies  |       20 |    Transmitted
                  LLDP-MED POE |        9 |    Transmitted
                         802.3 |       30 |    Transmitted
                      Optional |       38 |    Transmitted
            LLDP-MED Inventory |       97 |    Transmitted
                         802.1 |        8 |    Transmitted

Total: 285 bytes
```

```
Left: 1203 bytes
```

Example

The following example shows the global logging configuration.

```
Switch# show logging

Logging service is enabled

  TARGET   |  STATUS   |          Server (PORT)          |
FACILITY | LOG LEVEL
----------+----------+---------------------------------+------
----+---------------------------------
 buffered |  enabled |                                 |
|emerg, alert, crit, error, warning, notice
  console |  enabled |                                 |
|emerg, alert, crit, error, warning, notice
```

The following table describes the significant fields shown in the example:

Field	Description
TARGET	The destinations where the logging messages are stored.
STATUS	The status of logging destinations.
Server (PORT)	Server address and port number for the remote logging.
FACILITY	The facility of the log messages.
LOG LEVEL	The severity level of the log messages.

The following example shows the log messages stored in the RAM.

```
Switch# show logging buffered
                Log messages in buffered

 NO.|   Timestamp     |    Category     | Severity |  Message
--------------------+---------------+----------+------------
---------------------------
   1|Jan 01 2000 08:14:47|             AAA|    notice| New
console connection for user admin, source asyncACCEPTED
   2|Jan 01 2000 08:03:12|             AAA|    notice| New
console connection for user admin, source async  ACCEPTED
   3|Jan 01 2000 08:01:13|          System|    notice| System
Startup!
   4|Jan 01 2000 08:01:13|          System|    notice| Logging
is enabled
```

The following table describes the significant fields shown in the example:

Field	Description
NO	The number of log entry.
Timestamp	Time when the message was generated.
Category	The category of the message.
Severity	The severity level of the messages.
Message	The message content.

14. Logging

clear logging

Syntax	**clear logging** (**buffered**|**file**)
Parameter	**buffered** Buffered logging. **file** File logging.
Default	N/A
Mode	Privileged EXEC
Usage	To clear the log messages from the internal logging buffer and flash, use the command **clear logging** in the Privileged EXEC mode.

Example	The following example clear the log messages stored in RAM and Flash.
	`Switch# clear logging buffered`
	`Switch# clear logging file`

logging

Syntax	**logging** **no logging**
Parameter	N/A
Default	Logging service is enabled.
Mode	Global Configuration
Usage	To enable logging service on the switch, use the command **logging** in the Global Configuration mode. Otherwise, use the **no** form of the command to disable the logging service on the switch. The status of global logging server is available from the command **show** **logging** in the Privileged EXEC mode. When the logging service is enabled, logging on and off at each destination rule can be individually configured by the command **logging console**, **logging buffered**, **logging file,** and **logging host** in the Global Configuration mode. If the logging service is disabled, no messages will be sent to these destinations.
Example	The following example disables and enables the logging service on the switch.

```
Switch(config)# no logging
Switch(config)# logging
```

logging host

Syntax

logging host (*ip-addr*|*hostname*) [**facility** *facility*] [**port** *port*] [**severity** *sev*]
no logging host (*ip-addr*|*hostname*)

Parameter

ipv4-addr	IPv4 address of the remote logging server.
hostname	Host name.
facility *facility*	Specify the facility of the logging messages. It can be on of the following value: local0, local1, local2, local3, local4, local5, local6, and local7. The default value of facility is local7.
port *port*	Specify the port number of the remote logging server. The valid range is from 0 to 65535, and the default value is 512.
severity *sev*	Specify the minimum severity of the logging messages. The valid range is from 0 to 7, and the number 0 to 7 represents emerg, alert, critical, error, warning, notice, info, and debug individually. The default value of minimum severity level is 5 (emerg, alert, crit, error, warning, notice).

Default

No remote logging destination is configured.

Mode

Global Configuration

Usage

To define the logging server, use the command **logging host** to add the remote logging server in the Global Configuration mode. Otherwise, use the command **no logging host** to remove the remote logging rules.

For the host name configuration, logging service would try translating the host name to IP address directly. Add the logging host would be failed on the failure of host name translating.

Example

The following example adds the remote logging rules by IP and Hostname.

```
Switch(config)# logging host 1.2.3.4
Switch(config)# logging host SYSLOG
```

logging severity

Syntax

logging (**buffered**|**console**|**file**) [**severity** *sev*]
no logging (**buffered**|**console**|**file**)

Parameter	**buffered**	Log messages to RAM.
	console	Log messages to console buffer.
	file	Log messages to Flash.
	severity *sev*	Specify the minimum severity of the logging messages. The valid range is from 0 to 7, and the number 0 to 7 represents emerg, alert, critical, error, warning, notice, info, and debug individually. The default minimum severity of the **logging severity** configuration is 5 (emerg, alert, crit, error, warning, notice).
Default	Logging to buffered and console is enabled, and the default minimum severity level is 5 (emerg, alert, crit, error, warning, notice).	
Mode	Global Configuration	
Usage	To set the minimum severity for the messages that are logged to RAM, console, or Flash, use the command logging severity in the Global Configuration mode. Use the **no** form of the command to remove the mechanism of logging to RAM, console, or Flash individually.	

Example	The following example sets the minimum severity level of logging to RAM and Flash as debugging.
	`Switch(config)# logging buffered 7`
	`Switch(config)# logging flash 7`	

show logging

Syntax	**show logging** [**buffered**|**file**]	
Parameter	**buffered**	Buffered logging.
	file	File logging.
Default	N/A	
Mode	Previledged EXEC	
Usage	To display the global logging configuration, and the logging messages stored in the RAM and Flash, use the command **show logging** in the Privileged EXEC mode.	

Example	The following example shows the global logging configuration.
	`Switch# show logging`
	`Logging service is enabled`	

```
  TARGET   |  STATUS   |          Server (PORT)          |
FACILITY | LOG LEVEL
----------+----------+---------------------------------+------
----+---------------------------------
 buffered |  enabled |                                   |
|emerg, alert, crit, error, warning, notice
  console |  enabled |                                   |
|emerg, alert, crit, error, warning, notice
```

The following table describes the significant fields shown in the example:

Field	Description
TARGET	The destinations where the logging messages are stored.
STATUS	The status of logging destinations.
Server (PORT)	Server address and port number for the remote logging.
FACILITY	The facility of the log messages.
LOG LEVEL	The severity level of the log messages.

The following example shows the log messages stored in the RAM.

```
Switch# show logging buffered

                        Log messages in buffered

 NO.|   Timestamp     |    Category     | Severity |  Message
---------------------+----------------+----------+------------
---------------------------
   1|Jan 01 2000 08:14:47|             AAA|    notice| New
console connection for user admin, source async  ACCEPTED
   2|Jan 01 2000 08:03:12|             AAA|    notice| New
console connection for user admin, source async  ACCEPTED
   3|Jan 01 2000 08:01:13|          System|    notice| System
Startup!
   4|Jan 01 2000 08:01:13|          System|    notice| Logging
is enabled
```

The following table describes the significant fields shown in the example:

Field	Description
NO	The number of log entry.

Timestamp	Time when the message was generated.
Category	The category of the message.
Severity	The severity level of the messages.
Message	The message content.

15. MAC Address Table

clear mac address-table

Syntax **clear mac address-table dynamic [interfaces** *IF_PORTS*|**vlan** *vlan-id*]

Parameter

interfaces *IF_PORTS*	Interface status and configuration.
vlan *vlan-id*	VLAN configuration。

Default N/A

Mode Privileged EXEC

Usage To clear the dynamic (learned) MAC entries from the MAC address table, the specific interface, or the specific VLAN, use the command **clear mac address-table** in the Priveleged EXEC mode.

Example The following example clears the learned MAC addresses on the interface gi1.

```
Switch# clear mac address-table dynamic interfaces gi1
```

mac address-table aging-time

Syntax **mac accress-table aging-time** *seconds*

Parameter

<10-630>	Aging-time range in seconds indicating how long an entry remain in mac address table

Default The default aging time is 300 seconds.

Mode Global Configuration

Usage To set the aging time of the MAC address table, use the command **mac**

address-table aging-time in the Global Configuration mode.

Example

The following example set the agimg time to 500 seconds.

```
Switch(config)# mac address-table aging-time 500
```

mac address-table static

Syntax

mac address-table static *mac-addr* **vlan** *vlan-id* **interfaces** *IF_PORTS*
mac address-table static *mac-addr* **vlan** *vlan-id* **drop**
no mac address-table static *mac-addr* **vlan** *vlan-id*

Parameter

mac-addr	MAC address xx:xx:xx:xx:xx:xx.
vlan *vlan-id*	VLAN ID (e.g. 100).
Interface *IF_PORTS*	Interface status and configuration.
drop	Drop packets with the specified source or destination unicast mac address .

Default

No static addresses are configured

Mode

Global Configuration

Usage

To add a static address to the MAC address table, use the command **mac address-table static** in the Global Configuration mode. For the unicast MAC address filtering, use the command **mac address-table static** with parameter **drop** to drop the packets with the specified source or destination unist MAC address. To delete the static entry from the MAC address table, use the **no** form of the command.

Example

The following example adds a static address into MAC address table.

```
Switch# mac address-table static 00:11:22:33:44:55 vlan 1
interfaces fa5
```

The following example adds a rule of unist address filtering into MAC address table.

```
Switch# mac address-table static 00:11:22:33:44:55 vlan 1 drop
```

show mac address-table

Syntax

show mac address-table [**dynamic**|**static**] [**interface** *IF_PORTS*] [**vlan** *vlan-id*]
show mac address-table [*mac-addr*] [**vlan** *vlan-id*]

Parameter

dynamic	Dynamic entries
static	Static entries
Interface *IF_PORTS*	Interface status and configuration.
vlan	VLAN configuration.
A:B:C:D:E:F	MAC address xx:xx:xx:xx:xx:xx

Default

N/A

Mode

Privileged EXEC

Usage

To show the entry in the MAC address table, use the command show mac address-table in the Privilieged EXEC mode.

Example

The following example displays the entire MAC addrss table.

```
Switch# show mac address-table
 VID   |    MAC Address     |        Type         |   Ports
------+-------------------+--------------------+--------------
-
    1 | DE:AD:BE:EF:01:02 |    Management      | CPU
    1 | 00:01:02:03:04:05 |       Static       | All
  100 | 00:11:22:33:44:55 |       Static       | gi1
    1 | 1C:E6:C7:8F:10:02 |      Dynamic       | fa3
    1 | AA:BB:CC:DD:EE:FF |       Static       | All
    1 | DE:AD:BE:EF:01:0C |      Dynamic       | gi1

Total number of entries: 6
Switch#
```

The following example displays the static MAC address configuration for the interface fa1.

```
Switch# show mac address-table static interfaces fa1
 VID  |      MAC Address     |         Type         |     Ports
------+-------------------+--------------------+--------------
-
1      | 00:01:02:03:04:05          |       Filtering       | All
1      | AA:BB:CC:DD:EE:FF      |       Filtering       | All

Total number of entries: 2
Switch#
```

The following example displays address table entries containing the specified MAC address.

```
Switch# show mac address-table 00:11:22:33:44:55 vlan 100
 VID  |       MAC Address      |       Type       |      Ports
------  +   -------------------      + ------------     + ----------------
100 | 00:11:22:33:44:55 |     Static   | gi1

Total number of entries: 1
```

show mac address-table counters

Syntax **show mac address-table counters**

Parameter N/A

Default N/A

Mode Privileged EXEC

Usage To display the total entries in the MAC addrss table, use the command **show mac address-table counters** in the Privilieged EXEC mode.

Example The following example display numbers of addresses in the address table.

```
Switch# show mac address-table counters
Total number of entries: 5
```

show mac address-table aging-time

Syntax **show mac address-table aging-time**

Parameter N/A

Default N/A

Mode Privileged EXEC

Usage	To show MAC address aging time, use the command **show mac address-table aging-time** in the Privilieged EXEC mode.

Example	The following example displays aging time for the MAC address table.
	`Switch# show mac address-table aging-time`
	`Mac Address Table aging time:  300 sec`

16. MAC VLAN

vlan mac-vlan group (Global)

Syntax	**vlan mac-vlan group** *<1- 2147483647> mac-address* **mask** *<9-48>* **no vlan mac-vlan group** *mac-address* **mask** *<9-48>*

<Parameter		
	<1-2147483647>	Specify the group ID
	Mac-address	MAC address mask.
	<9-48>	9 to 48 bits. 48 bits means full match.

Default	No MAC Groups are configured.
Mode	Global Configuration
Usage	Use the "**vlan mac-vlan group"** command to create MAC address group. Use the **no** form of this command to delete specify group.
Example	The following example shows how to create a MAC group with group ID 3. `Switch(config)# vlan mac-vlan group 333 22:33:44:55:66:77 mask 48`

vlan mac-vlan group (Interface)

Syntax	**vlan mac-vlan group** *<1- 2147483647>* **vlan** *<1-4094>* **no vlan mac-vlan [group *<1- 2147483647>]***

Parameter		
	<1-2147483647>	Specify group ID to map.
	vlan	Specify mapping VLAN ID

Default	No mappings are configured.
Mode	Interface Configuration
Usage	Use the "**vlan mac-vlan group"** to create mapping of group and VLAN ID of an interface. Use the **no** form of this command to delete mapping.
Example	The following example shows how to mapping group id 333 to VLAN 100 on interface fa1. Switch(config)# Interface gi1 `Switch(config-if)# vlan mac-vlan group 333 VLAN 100`

show vlan mac-vlan groups

Syntax	**show vlan mac-vlan groups**
Default	N/A
Mode	Privileged EXEC
Usage	Use the **show vlan mac-vlan groups** command to display mac groups configuration
Example	This following example shows how to display mac group. `Switch# show vlan mac-vlan groups` Mac Address Mask Group Id ---------- ---------- ---------- 22:33:44:55:66:77 48 222 44:55:66:77:88:99 48 333 88:99:00:aa:bb:cc 40 444 88:99:00:ab:bb:10 48 111

show vlan mac-vlan interfaces

Syntax	**show vlan mac-vlan [interfaces** IF_PORTS]
Parameter	IF_PORTS (Optional) Specify interfaces mac vlan to display. Display all ports if not specify.
Default	N/A
Mode	Privileged EXEC
Usage	Use the **show vlan mac-vlan interface** command in EXEC mode to display the mac-vlan interfaces setting
Example	The following example shows how to display the MAC-Based VLAN interfaces setting Switch# **show vlan mac-vlan interfaces gi1** Port fa1 : Mac based VLANs: Group ID Vlan ID ------------ ------- 333 444 444 1

17. Management ACL

management access-list

Syntax	**management access-list** NAME **no management access-list** NAME
Parameter	NAME Specifies the access list name
Default	No management ACL is configured.
Mode	Global Configuration

Usage	Use the **management access-list** command to create a management access list and to enter management access-list configuration mode. The name of ACL must be unique that cannot have same name with other management ACL. Use the no form of this command to delete
Example	The following example shows how to add a management ACL with name "test" `Switch(config)# management access-list test`

management access-class

Syntax	**management access-class** NAME **no management access-class**
Parameter	NAME Specifies the access list name
Default	Default is no management ACL restrictions
Mode	Global Configuration
Usage	Use the **management access-class** command to activate a management ACL. Use the no form of this command to delete
Example	The following example shows how to add a management ACL with name "test" `Switch(config)# management access-list test`

deny

Syntax	**[sequence** <1-65535>**] deny interfaces** IF_PORTS **service (all|http|https|snmp|ssh|telnet)** **[sequence** <1-65535>**] deny ip** A.B.C.D/A.B.C.D **interfaces** IF_PORTS **service (all|http|https|snmp|ssh|telnet)** **[sequence** <1-65535>**] deny ipv6** X:X::X:X/<0-128> **interfaces** IF_PORTS **service (all|http|https|snmp|ssh|telnet)**

Parameter	<1-65535>	Value of sequence ,that is from 1 to 65535
	interfaces *IF_PORTS*	Interface status and configuration.
	ip A.B.C.D/A.B.C.D	Global IP configuration commands.
	ipv6 X:X::X:X/<0-128>	IPV6 configuration.
	(all|http|https|snmp|ssh|telnet)	Specify the type of services.

Default No rules are configured.

Mode Management Access-List Configuration

Usage Use the deny command to add deny rules that drop those packets hit the rule.

Example The following example shows how to add a deny rule to drop all types of services packets that source ip is 1.1.1.1 from interface gi1.

```
Switch(config)# management access-list test
Switch(config-macl)# sequence 1 deny ip
1.1.1.1/255.255.255.255 interfaces gi1 service all
```

permit

Syntax **[sequence** <1-65535>**] permit interfaces** IF_PORTS **service (all|http|https|snmp|ssh|telnet)**
[sequence <1-65535>**] permit ip** A.B.C.D/A.B.C.D **interfaces** IF_PORTS **service (all|http|https|snmp|ssh|telnet)**
[sequence <1-65535>**] permit ipv6** X:X::X:X/<0-128> **interfaces** IF_PORTS **service (all|http|https|snmp|ssh|telnet)**

Parameter	<1-65535>	Value of sequence ,that is from 1 to 65535.
	interfaces *IF_PORTS*	Interface status and configuration.
	ip A.B.C.D/A.B.C.D	Global IP configuration commands.
		ipv6 X:X::X:X/<0-128> IPV6 configuration.
	(all|http|https|snmp|ssh|telnet)	Specify the type of services.

Default No rules are configured.

Mode Management Access-List Configuration

Usage Use the permit command to add permit rules that bypass those packets hit the rule.

Example The following example shows how to add a permit rule to bypass http service packets that source ip is 2.2.2.2 from interface gi1.

```
Switch(config)# management access-list test
Switch(config-macl)# sequence 2 permit ip
2.2.2.2/255.255.255.255 interfaces gi1 service http
```

no sequence

Syntax **no sequence** <1-65535>

Parameter		
	<1-65535>	Specify sequence index of ACL entry to delete.

Default No rules are configured.

Mode Management Access-List Configuration

Usage Use the **no sequence** command to delete an entry in management ACL.

Example The following example shows how to delete an entry.

```
Switch(config)# management access-list test
Switch(config-macl)# sequence 10 deny interfaces gi1 service
all
Switch(config-macl)# no sequence 10
```

show management access-class

Syntax **show management access-class**

Parameter

Default No default is defined

Mode Privileged EXEC

Usage Use the **show management access-class** command to show the active management access-list.

Example The example shows how to show management access-class

```
Switch# show management access-class
Management access-class is enabled, using access-list test
```

show management access-list

Syntax	**show management access-list** [NAME]
Parameter	NAME — Specifies the access list name.
Default	No default is defined
Mode	Privileged EXEC
Usage	Use the **show management access-list** command to show management ACL.
Example	The example shows how to show management access-list Switch# show management access-list 1 management access-list is created test ---- sequence 1 deny ip 1.1.1.1/255.255.255.255 interfaces gi1 service all ! (Note: all other access implicitly denied)

18. Mirror

mirror session destination interface

Syntax	**mirror session** *<1-4>* **destination interface** *IF_NMLPORT* [**allow-ingress**] **no mirror session** *<1-4>* **destination interface** *IF_NMLPORT* **no mirror session** (*<1-4>* | **all**)
Parameter	*<1-4>* — Specify the mirror session to configure *IF_NMLPORT* — Specify the SPAN destination. A destination must be a physical port **allow-ingress** — Enable ingress traffic forwarding.
Default	No monitor sessions are configured.
Mode	Global Configuration

Usage

Use the "**mirror session destination interface"** command to start a destination interface of a port mirror session.

Use the **no** form of this command to stop a destination interface of a port mirroring session.

Use the "**no mirror session**" command to disable all mirror sessions or specific mirror session.

Example

The following example shows how to create a local session 1 to monitor both sent and received traffic on source port fa1.

```
Switch(config)# mirror session 1 destination interface gi1
Switch# show mirror session 1
Session 1 Configuration
Source RX Port    : fa2-5
Source TX Port    : fa2-5
Destination port  : fa1
Ingress State: disabled
```

mirror session source interface

Syntax

mirror session *<1-4>* **source interfaces** *IF_PORTS* (**both** | **rx** | **tx**)
no mirror session *<1-4>* **source interfaces** *IF_PORTS* (**both** | **rx** | **tx**)
no mirror session (*<1-4>* | **all**)

<Parameter

<1-4>	Specify the mirror session to configure
IF_PORTS	Specify the source interface, Valid interfaces include physical ports and port channels.
both	Both
rx	RX only
tx	TX only

Default

No monitor sessions are configured.

Mode

Global Configuration

Usage

Use the "**mirror session source interface"** command to start a port mirror session.

Use the **no** form of this command to stop a port mirroring session.

Use the "**no mirror session**" command to disable all mirror sessions or specific mirror session.

Example The following example shows how to create a local SPAN session 1 to monitor both sent and received traffic on source port fa1.

```
Switch(config)# mirror session 1 source interface gi2-5 both
Switch(config)# mirror session 1 destination interface gi1
Switch(config)# show mirror session 1
Session 1 Configuration
Source RX Port    : gi2-5
Source TX Port    : gi2-5
Destination port  : gi1
Ingress State: disabled
```

show mirror

Syntax **show mirror** [**session** <*1-4*>]

Parameter

<*1-4*>	Session ID (e.g. 1-4)configuraton

Default N/A

Mode Privileged EXEC

Usage Use the **show mirror** command to display mirror session configuration

Example This following example shows how to display mirror session configuration

```
Switch(config)# show mirror
Session 1 Configuration
Source RX Port    : gi2-5
Source TX Port    : gi2-5
Destination port  : gi1
Ingress State: disabled

Session 2 Configuration
Mirrored source   : Not Config
Destination port  : Not Config

Session 3 Configuration
Mirrored source   : Not Config
Destination port  : Not Config

Session 4 Configuration
Mirrored source   : Not Config
Destination port  : Not Config
```

19. MLD Snooping

ipv6 mld snooping

Syntax	**ipv6 mld snooping** **no ipv6 mld snooping**
Parameter	None
Default	Default is disabled
Mode	Global Configuration
Usage	Use the **ipv6 mld snooping** command to enable MLD snooping function. Use the **no** form of this command to disable. Disable will clear all ipv6 mld snooping dynamic group and dynamic router port, and make the static ipv6 mld group invalid. No more dynamic group and router port by mld message will be learned. You can verify settings by the **show ipv6 mld snooping** command.
Example	The following example specifies that set **ipv6 mld snooping** test. Switch(config)# **ipv6 mld snooping**

ipv6 mld snooping report-suppression

Syntax	**ipv6 mld snooping report-suppression** **no ipv6 mld snooping report-suppression**
Parameter	none
Default	Default is enabled
Mode	Global Configuration
Usage	Use the **ipv6 mld snooping report-suppression** command to enable MLD snooping report-suppression function. Use the **no** form of this command to disable. Disable report-supression will forward all received reports to the vlan router ports. You can verify settings by the **show ipv6 mld snooping** command

Example	The following example specifies that disable ipv6 mld snooping report-suppression test. Switch(config)# **no ipv6 mld snooping report-suppression**

ipv6 mld snooping version

Syntax	**ipv6 mld snooping version (1|2)**
Parameter	(1|2) Ipv6 mld snooping running version 1 or 2
Default	Default is version 1
Mode	Global Configuration
Usage	Use the **ipv6 mld snooping version** command to change MLD support version. Version 2 packet won't be processed if choose version 1. You can verify settings by the **show ip igmp snooping** command.
Example	The following example specifies that set ipv6 mld snooping version 2. Switch(config)# **ipv6 mld snooping version 2**

ipv6 mld snooping unknown-multicast action

Syntax	**ipv6 mld snooping unknown-multicast action (drop | flood |router-port)** **no ipv6 mld snooping unknown-multicast action**
Parameter	drop Drop the packets flood Flood the packets router- port Forward to router ports
Default	Default is flood.
Mode	Global Configuration
Usage	When igmp and mld snooping disabled, it can't set action router-port. When disable igmp snooping & mld snooping, it set unknown multicast action flood. When action is router-port to flood or drop, it will delete the unknown multicast group entry. Use the **ipv6 mld snooping unknown-multicast action** command to change

	action. Use the **no** form of this command to restore to default. You can verify settings by the **show ipv6 mld snooping** command.
Example	The following example specifies that set ipv6 mld unknown multicast action router-port test. Switch(config)# **ipv6 mld snooping unknown-multicast action router-port**

ipv6 mld snooping vlan

Syntax	**ipv6 mld snooping vlan VLAN-LIST** **no ipv6 mld snooping vlan VLAN-LIST**
Parameter	VLAN-LIST — VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
Default	Default is disabled for all VLANs
Mode	Global Configuration
Usage	Disable will clear all ipv6 mld snooping dynamic group and dynamic router port and make all static ip igmp group invalid of this vlan. Will not learn dynamic group and router port by igmp message any more. Use the **ipv6 mld snooping vlan** command to enable MLD on VLAN. Use the **no** form of this command to disable You can verify settings by the **show ipv6 mld snooping vlan** command.
Example	The following example specifies that set ipv6 mld snooping vlan test. Switch(config)# **ipv6 mld snooping vlan 1**

ipv6 mld snooping vlan parameters

Syntax	**ipv6 mld snooping vlan <VLAN-LIST> last-member-query-count <1-7>** **no ipv6 mld snooping vlan <VLAN-LIST> last-member-query-count** **ipv6 mld snooping vlan <VLAN-LIST> last-member-query-interval <1-60>** **no ipv6 mld snooping vlan <VLAN-LIST> last-member-query-interval** **[no] ipv6 mld snooping vlan <VLAN-LIST> router learn pim-dvmrp** **[no] ipv6 mld snooping vlan <VLAN-LIST> fastleave** **ipv6 mld snooping vlan <VLAN-LIST> query-interval <30-18000>**

no ipv6 mld snooping vlan <VLAN-LIST> query-interval
ipv6 mld snooping vlan <VLAN-LIST> response-time <5-20>
no ipv6 mld snooping vlan <VLAN-LIST> response-time
ipv6 mld snooping vlan <VLAN-LIST> robustness-variable <1-7>
no ipv6 mld snooping vlan <VLAN-LIST> robustness-variable

Parameter

VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
last-member-query- count <1-7>	Last Member Query Count
last-member-query-interval <1-60>	Last Member Query Interval
query-interval <30-18000>	Query Interval
response-time <5-20>	Response time
robustness-variable <1-7>	Robustness Variable

Default

no ipv6 mld snooping vlan 1-4094 last-member-query-count
no ipv6 mld snooping vlan 1-4094 last-member-query-interval
ipv6 mld snooping vlan 1-4094 router learn pim-dvmrp
no ipv6 mld snooping vlan 1-4094 fastleave
no ipv6 mld snooping vlan 1-4094 query-interval
no ipv6 mld snooping vlan 1-4094 response-time
no ipv6 mld snooping vlan 1-4094 robustness-variable

Mode

Global Configuration

Usage

'no ipv6 mld snooping vlan 1 (last-member-query-count | last-member-query-interval | query-interval | response-time | robustness-variable)' will set the vlan parameters to default.
The cli setting will change the ipv6 mld vlan parameters admin settings.
The configure can use 'show ipv6 mld snooping vlan 1'.

Example

The following example specifies that set ipv6 mld snooping vlan parameters test.
Switch(config)# **ipv6 mld snooping vlan 1 fastleave**
Switch(config)# **ipv6 mld snooping vlan 1 last-member-query-count 5**
Switch(config)# **ipv6 mld snooping vlan 1 last-member-query-interval 3**
Switch(config)# **ipv6 mld snooping vlan 1 query-interval 100**
Switch(config)# **ipv6 mld snooping vlan 1 response-time 12**
Switch(config)# **ipv6 mld snooping vlan 1 robustness-variable 4**
Switch# **show ipv6 mld snooping vlan 1**
MLD Snooping is globaly enabled
MLD Snooping VLAN 1 admin : disabled
MLD Snooping oper mode : disabled

MLD Snooping robustness: admin 4 oper 2
MLD Snooping query interval: admin 100 sec oper 125 sec
MLD Snooping query max response : admin 12 sec oper 10 sec
MLD Snooping last member query counter: admin 5 oper 2
MLD Snooping last member query interval: admin 3 sec oper 1 sec
MLD Snooping last immediate leave: enabled
MLD Snooping automatic learning of multicast router ports: enabled

ipv6 mld snooping vlan last-member-query-count

Syntax	**ipv6 mld snooping vlan <VLAN-LIST> last-member-query-count <1-7>** **no ipv6 mld snooping vlan <VLAN-LIST> last-member-query-count**	
Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
	last-member-query-count <1-7>	Last Member Query Count
Default	Default is 2	
Mode	Global Configuration	
Usage	Use the **ipv6 mld snooping vlan last-member-query-count** command to change how many query packets will send. Use the **no** form of this command to restore to default. You can verify settings by the **show ipv6 mld snooping vlan** command	
Example	The following example specifies that set **ipv6 mld snooping vlan last-member-query-count** test. Switch(config)# **ipv6 mld snooping vlan 1 last-member-query-count 5**	

ipv6 mld snooping vlan last-member-query-interval

Syntax	**ipv6 mld snooping vlan <VLAN-LIST> last-member-query-interval <1-60>** **no ipv6 mld snooping vlan <VLAN-LIST> last-member-query-interval**	
Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
	last-member-query-interval <1-60>	Last Member Query Interval

Default	Default is 1
Mode	Global Configuration
Usage	Use the **ipv6 mld snooping vlan last-member-query-interval** command to set interval between each query packet. Use the **no** form of this command to restore to default You can verify settings by the **show ipv6 mld snooping vlan** command
Example	The following example specifies that set **ipv6 mld snooping vlan last-member-query-interval** test. Switch(config)# **ipv6 mld snooping vlan 1 last-member-query-interval 3**

ipv6 mld snooping vlan query-interval

Syntax	**ipv6 mld snooping vlan <VLAN-LIST> query-interval <30-18000>** **no ipv6 mld snooping vlan <VLAN-LIST> query-interval**	
Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
	query-interval <30-18000>	Query Interval
Default	Default is 125	
Mode	Global Configuration	
Usage	Use the **ipv6 mld snooping vlan query-interval** command to set interval between each query. Use the **no** form of this command to restore to default You can verify settings by the **show ipv6 mld snooping vlan** command	
Example	The following example specifies that set **ipv6 mld snooping vlan query-interval** test. Switch(config)# **ipv6 mld snooping vlan 1 query-interval 100**	

ipv6 mld snooping vlan response-time

Syntax	**ipv6 mld snooping vlan <VLAN-LIST> response-time <5-20>** **no ipv6 mld snooping vlan <VLAN-LIST> response-time**	
Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094.
	response-time <5-20>	Response time
Default	Default is 10	
Mode	Global Configuration	
Usage	Use the **ipv6 mld snooping vlan response-time** command to set response time. Use the **no** form of this command to restore to default. You can verify settings by the **show ipv6 mld snooping vlan** command	
Example	The following example specifies that set **ipv6 mld snooping vlan response-time** test. Switch(config)# **ipv6 mld snooping vlan 1 response-time 12**	

ipv6 mld snooping vlan robustness-variable

Syntax	**ipv6 mld snooping vlan <VLAN-LIST> robustness-variable <1-7>** **no ipv6 mld snooping vlan <VLAN-LIST> robustness-variable**	
Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094.
	robustness-variable <1-7>	Robustness Variable
Default	Default is 2	
Mode	Global Configuration	
Usage	Use the **ipv6 mld snooping vlan robustness-variable** command to times to retry. Use the **no** form of this command to restore to default You can verify settings by the **show ipv6 mld snooping vlan** command	

Example	The following example specifies that set ipv6 mld snooping vlan parameters test. Switch(config)# **ip igmp snooping vlan 1 robustness-variable 2**

ipv6 mld snooping vlan router

Syntax	**ipv6 mld snooping vlan VLAN-LIST router learn pim-dvmrp** **no ipv6 mld snooping vlan VLAN-LIST router learn pim-dvmrp**
Parameter	VLAN-LIST — VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094.
Default	Default is enabled
Mode	Global Configuration
Usage	Use the **ipv6 mld snooping vlan router** command to enable learning router port by routing protocol packets such as PIM/PIMv2, DVMRP, MOSPF. Use the **no** form of this command to disable. You can verify settings by the **show ipv6 mld snooping vlan** command
Example	The following example specifies that set **ipv6 mld snooping vlan router learn pim-dvmrp** test. Switch(config)# **ipv6 mld snooping vlan 99 router learn pim-dvmrp**

ipv6 mld snooping vlan static-port

Syntax	**ipv6 mld snooping vlan <VLAN-LIST> static-port IF_PORTS** **no ipv6 mld snooping vlan <VLAN-LIST> static-port IF_PORTS**
Parameter	VLAN-LIST — VLAN List (e.g. 3,6-8): The rangeof VLAN ID is 1 to 4094. IF_PORTS — specifies a port list to set or remove
Default	No static port by default
Mode	Global Configuration

Usage	**Use the ipv6 mld snooping vlan static-port command to add static forwarding port, all known vlan 1 ipv6 group will add the static ports. Use the no form of this command to delete static port.** You can verify settings by the **show ipv6 mld snooping forward-all** command.
Example	The following example specifies that set ipv6 mld snooping static port test. Switch(config)# **ipv6 mld snooping vlan 1 static -port gi1-2**

ipv6 mld snooping vlan forbidden-router-port

Syntax	**ipv6 mld snooping vlan <VLAN-LIST> forbidden-router-port IF_PORTS** **no ipv6 mld snooping vlan <VLAN-LIST> forbidden-router-port IF_PORTS**
Parameter	VLAN-LIST — VLAN List (e.g. 3,6-8): The rangeof VLAN ID is 1 to 4094. IF_PORTS — specifies a port list to set or remove
Default	No forbidden router ports by default
Mode	Global Configuration
Usage	Use the **ipv6 mld snooping vlan forbidden-router-port** command to add static forbidden router port. This will also remove port from static router port. The forbidden router port will not forward received query packet .Use the **no** form of this command to delete forbidden router port. You can verify settings by the **show ipv6 mld snooping router** command.
Example	The following example specifies that set ipv6 mld snooping forbidden test. Switch(config)# **ipv6 mld snooping vlan 1 forbidden-router-port gi2**

ipv6 mld snooping vlan forbidden-router-port

Syntax	**ipv6 mld snooping vlan <VLAN-LIST> forbidden-router-port IF_PORTS** **no ipv6 mld snooping vlan <VLAN-LIST> forbidden-router-port IF_PORTS**
Parameter	VLAN-LIST — VLAN List (e.g. 3,6-8): The rangeof VLAN ID is 1 to 4094. IF_PORTS — specifies a port list to set or remove
Default	No forbidden router ports by default

Mode	Global Configuration
Usage	Use the **ipv6 mld snooping vlan forbidden-router-port** command to add static forbidden router port. This will also remove port from static router port. The forbidden router port will not forward received query packet .Use the **no** form of this command to delete forbidden router port. You can verify settings by the **show ipv6 mld snooping router** command.
Example	The following example specifies that set ipv6 mld snooping forbidden test. Switch(config)# **ipv6 mld snooping vlan 1 forbidden-router-port gi2**

ipv6 mld snooping vlan static router port

Syntax	**ipv6 mld snooping vlan <VLAN-LIST> static-router-port IF_PORTS** **no ipv6 mld snooping vlan <VLAN-LIST> static-router-port IF_PORTS**

Parameter		
	VLAN-LIST	VLAN List (e.g. 3,6-8): The rangeof VLAN ID is 1 to 4094.
	IF_PORTS	specifies a port list to set or remove

Default	None static router ports by default
Mode	Global Configuration
Usage	Use the **ipv6 mld snooping vlan static-router-port** command to add static router port. All query packets will forward to this port. Use the **no** form of this command to delete static router port. You can verify settings by the **show ipv6 mld snooping router** command..
Example	The following example specifies that set ipv6 mld snooping static test. Switch(config)# **ipv6 mld snooping vlan 1 static-router-port gi1-2**

ipv6 mld snooping vlan static-group

Syntax	**ipv6 mld snooping vlan <VLAN-LIST> static-group [<ipv6-addr>] interfaces IF_PORTS** **no ipv6 mld snooping vlan <VLAN-LIST> static-group <ipv6-addr> interfaces IF_PORTS**

Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The rangeof VLAN ID is 1 to 4094.
	X:X::X:X	IPv6 multicast address
	IF_PORTS	specifies port list to set or remove
Default	No static group by default	
Mode	Global Configuration	
Usage	Use the **ipv6 mld snooping vlan static-group** command to add a static group. The static group will not learn other dynamic ports. If the dynamic group exists, then the static group will overlap the dynamic group. The static group set to valid unless igmp snooping global and vlan enable. Use the **no** form of this command to delete a port in static group. If remove the last member of static group, the static group will be delete. You can verify settings by the **show ipv6 mld snooping group** command.	
Example	The following example specifies that set ipv6 mld snooping static group test. Switch(config)# **ipv6 mld snooping vlan 1 static-group ff13::1 interfaces gi1-2**	

ipv6 mld snooping vlan group

Syntax	**no ipv6 mld snooping vlan <VLAN-LIST> group <ipv6-addr>**	
Parameter	VLAN-LIST	VLAN List (e.g. 3,6-8): The rangeof VLAN ID is 1 to 4094.
	X:X::X:X	IPv6 multicast address
Default	None	
Mode	Global Configuration	
Usage	Use the **no ipv6 mld snooping vlan group** command to delete a group which could be static or dynamic. You can verify settings by the **show ipv6 mld snooping group** command.	

Example	The following example specifies that set ip igmp snooping static group test. Switch(config)# **no ipv6 igmp snooping vlan 1 group ff13::1**

profile range

Syntax	**profile range ipv6 <ipv6-addr> [ipv6-addr] action (permit | deny)**

Parameter	<ipv6-addr>	IPv6 information
	[ipv6-addr]	End ipv6 multicast address
	(permit | deny)	Permit: Action permit deny: Action deny
Default	None	
Mode	mld profile configuration mode	
Usage	Use the **profile** command to generate MLD profile. You can verify settings by the **show ipv6 mld profile** command	
Example	The following example specifies that set ipv6 mld profile test. Switch(config)# **ipv6 mld profile 1** Switch(config-mld-profile)# **profile range ipv6 ff13::1 ff13::10 action permit**	

ipv6 mld profile

Syntax	**ipv6 mld profile <1-128>** **no ipv6 mld profile <1-128>**

Parameter	<1-128>	specifies profile ID
Default	No profie exist by default	
Mode	Global Configuration	

Usage	Use the **ipv6 mld profile** command to enter profile configuration Use the **no** form of this command to delete profile You can verify settings by the **show ipv6 mld profile** command
Example	The following example specifies that set ipv6 mld profile test. Switch(config)# **ipv6 mld profile 1** Switch(config-mld-profile)# **profile range ipv6 ff13::1 ff13::10 action permit**

ipv6 mld filter

Syntax	**ipv6 mld filter <1-128>** **no ipv6 mld filter**	
Parameter	<1-128>	IPv6 filter profile index
	[interfaces IF_PORTS]	Specifies interfaces to display
Default	None	
Mode	Port Configuration	
Usage	Use the **ipv6 mld filter** command to bind a profile for port. When the port bind a profile. Then the port learning group will update, if the group is not match the profile rule it will remove the port from the group. Static group is excluded. Use the **no** form of this command to delete profile You can verify settings by the **show ipv6 mld filter** command	
Example	The following example specifies that set ipv6 mld filter test. Switch(config)# **interface gi1** Switch(config-if)# **ipv6 mld filter 1**	

ipv6 mld max-groups

Syntax	**ipv6 mld max-groups <0-1024>** **no ipv6 mld max-groups**	
Parameter	<0-256>	MLD snooping max group number 0~256.

Default	Default is 256
Mode	Port Configuration
Usage	Use the **ipv6 mld max-groups** command to limit port learning max group number. When the port has reach limitation, new group will not add this port. Static group is excluded. Use the **no** form of this command to restore to default You can verify settings by the **show ipv6 mld max-groups** command.
Example	The following example specifies that set ipv6 mld max-groups test. Switch(config)# **interface gi1** Switch(config-if)# **ipv6 mld max-groups 10**

ip igmp max-groups action

Syntax	**ipv6 mld max-groups action (deny | replace)**
Parameter	(deny | replace) Deny: MLD max-group action deny. Replace: MLD max-group action replace
Default	Default action is deny
Mode	Interface mode
Usage	Use the **ipv6 mld max-groups action** command to set the action when the numbers of groups reach the limitation. Use the **no** form of this command to restore to default You can verify settings by the **show ipv6 mld max-groups** command.
Example	The following example specifies that set action replace test. Switch(config-if)#**ipv6 mld max-groups action replace**

clear ipv6 mld snooping groups

Syntax	**clear ipv6 mld snooping groups [(dynamic | static)]**

Parameter	None	Clear ipv6 mld groups include dynamic and static
	(dynamic | static)	ipv6 mld group type is dynamic or static
Default	None	
Mode	Privileged EXEC	
Usage	This command will clear the ipv6 mld groups for dynamic or static or all of type. You can verify settings by the **show ipv6 mld snooping groups** command..	
Example	The following example specifies that clear ipv6 mld snooping groups test. Switch# **clear ipv6 mld snooping groups static**	

clear ipv6 mld snooping statistics

Syntax	**clear ipv6 mld snooping statistics**
Parameter	none
Default	None
Mode	Privileged EXEC
Usage	This command will clear the igmp statistics. You can verify settings by the **show ipv6 mld snooping** command.
Example	The following example specifies that clear ipv6 mld snooping statistics test. Switch# **clear ipv6 mld snooping statistics**

show ipv6 mld snooping groups counters

Syntax	**show ipv6 mld snooping groups counters**

Parameter	none
Default	None
Mode	Privileged EXEC
Usage	This command will display the ipv6 mld group counter include static group.
Example	The following example specifies that display ipv6 mld snooping group counter test. Switch# **show ipv6 mld snooping group counters** Total ipv6 mld snooping group number: 2

show ipv6 mld snooping groups

Syntax	**show ipv6 mld snooping groups [(dynamic | static)]**

Parameter		
	counters	Ipv6 group total entries
	(dynamic | static)	Display ipv6 mld group type is dynamic or static

Default	display all ipv6 mld groups
Mode	Privileged EXEC
Usage	This command will display the ipv6 mld groups for dynamic or static or all of type.

Example

The following example specifies that show ipv6 mld snooping groups test.
Switch# **show ipv6 mld snooping groups**

```
VLAN |          Group IP Address          |  Type  | Life(Sec) | Port
------+-------------------------------------+--------+-----------+-----------------
   1 |                          ff13::1 |  Static|   --      | fa1
   1 |                          ff13::2 |  Static|   --      | fa2

Total Number of Entry = 2
```

show ipv6 mld snooping router

Syntax	**show ipv6 mld snooping router [(dynamic | forbidden |static)]**	
Parameter	none	Show ipv6 mld router include dynamic and static and forbidden
	(dynamic | forbidden | static)	Display ipv6 mld router info for different type
Default	None	
Mode	Privileged EXEC	
Usage	This command will display the ipv6 mld router info.	

Example

The following example specifies that show ipv6 mld snooping router test.

```
Switch# show ipv6 mld snooping router
Dynamic Router Table
 VID  |  Port   | Expiry Time(Sec)
------+---------+-----------------

Total Entry 0

Static Router Table
 VID  | Port Mask
------+-----------------------
   1 | fa5

Total Entry 1

Forbidden Router Table
 VID  | Port Mask
------+-----------------------

Total Entry 0
```

show ipv6 mld snooping

Syntax	**show ipv6 mld snooping**
Parameter	none
Default	None
Mode	Privileged EXEC
Usage	This command will display ipv6 mld snooping global info.
Example	The following example specifies that show ipv6 mld snooping test.

```
Switch# show ipv6 mld snooping
                MLD Snooping Status
               --------------------

   Snooping                  : Disabled
   Report Suppression        : Enabled
   Operation Version         : v1
   Forward Method            : mac
   Unknown Multicast Action  : Flood

            Packet Statistics
   Total RX                  :  0
   Valid RX                  :  0
   Invalid RX                :  0
   Other RX                  :  0
   Leave RX                  :  0
   Report RX                 :  0
   General Query RX          :  0
   Specail Group Query RX    :  0
   Specail Group & Source Query RX :  0
   Leave TX                  :  0
   Report TX                 :  0
   General Query TX          :  0
   Specail Group Query TX    :  0
   Specail Group & Source Query TX  :  0
```

show ipv6 mld snooping vlan

Syntax	**show ipv6 mld snooping vlan [VLAN-LIST]**
Parameter	none — Show all ipv6 mld snooping vlan info [VLAN-LIST] — VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
Default	Show all ipv6 mld snooping vlan info
Mode	Privileged EXEC
Usage	This command will display ipv6 mld snooping vlan info.
Example	The following example specifies that show ipv6 mld snooping vlan test. Switch# **show ipv6 mld snooping vlan 1** MLD Snooping is globaly disabled MLD Snooping VLAN 1 admin : disabled MLD Snooping oper mode : disabled MLD Snooping robustness: admin 2 oper 2 MLD Snooping query interval: admin 125 sec oper 125 sec MLD Snooping query max response : admin 10 sec oper 10 sec MLD Snooping last member query counter: admin 2 oper 2 MLD Snooping last member query interval: admin 1 sec oper 1 sec MLD Snooping last immediate leave: disabled MLD Snooping automatic learning of multicast router ports: enabled

show ipv6 mld snooping forward-all

Syntax	**show ipv6 mld snooping forward-all [vlan VLAN-LIST]**
Parameter	none — Show all ipv6 mld snooping vlan forward-all info [vlan VLAN-LIST] — VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094.
Default	Show all vlan ipv6 mld forward all info
Mode	Privileged EXEC
Usage	This command will display ipv6 mld snooping forward all info.

Example	The following example specifies that show ipv6 mld snooping forward-all test. Switch# **show ipv6 mld snooping forward-all** MLD Snooping VLAN 1 MLD Snooping static port : None MLD Snooping forbidden port : None

show ipv6 mld profile

Syntax	**show ipv6 mld profile [<1-128>]**
Parameter	none — Show all ipv6 mld snooping profile info [<1-128>] — MLD profile index
Default	Show all ipv6 mld profile info
Mode	Privileged EXEC
Usage	This command will display ipv6 mld profile info.
Example	The following example specifies that show ipv6 mld profile test. Switch# **show ipv6 mld profile** IPv6 mld profile index: 1 IPv6 mld profile action: permit Range low ip: ff13::1 Range high ip: ff13::10

show ipv6 mld filter

Syntax	**show ipv6 mld filter [interfaces IF_PORTS]**
Parameter	none — Show all port filter [interfaces IF_PORTS] — Show specifies ports filter
Default	None
Mode	Privileged EXEC

Usage	This command will display ipv6 mld port filter info.

Example

The following example specifies that show ipv6 mld filter test.

```
Switch# show ipv6 mld filter
Port ID | Profile ID
---------+--------------
    gi1 : 1
    gi2 : None
    gi3 : None
    gi4 : None
    gi5 : None
--More--
```

show ipv6 mld max-group

Syntax	**show ipv6 mld max-group [interfaces IF_PORTS]**

Parameter		
	none	Show all port max-group
	[interfaces IF_PORTS]	Show specifies ports max-group

Default	None
Mode	Privileged EXEC
Usage	This command will display ipv6 mld port max-group.

Example

The following example specifies that show ipv6 mld max-group test.

```
Switch(config-if)# ipv6 mld max-groups 50
Switch# show ipv6 mld max-group
Port ID | Max Group
---------+--------------
    gi1 : 50
    gi2 : 256
    gi3 : 256
    gi4 : 256
    gi5 : 256
--More--
```

show ipv6 mld port max-group action

Syntax	**show ipv6 mld max-group action [interfaces IF_PORTS]**

Parameter		
	none	Show all port max-group action
	[interfaces IF_PORTS]	Show specifies ports max-group action

Default	Show all ports ipv6 mld max-group action
Mode	Privileged EXEC
Usage	This command will display ipv6 mld port max-group action.

Example

The following example specifies that show ipv6 mld max-group action test.

```
Switch(config-if)# ipv6 mld max-groups action replace
Switch# show ipv6 mld max-group action
Port ID | Max-groups  Action
---------+---------------------
    gi1 : replace
    gi2 : deny
    gi3 : deny
    gi4 : deny
    gi5 : deny
```

20. MVR

Mvr

Syntax	**mvr** **no mvr**
Parameter	None
Default	Default is disabled
Mode	Global Configuration

Usage	Use the **mvr** command to enable MVR function. The command will clear all mvr VLAN ID multicast snooping group. Use the **no** form of this command to disable. Disable will clear all mvr group. You can verify settings by the **show mvr** command.
Example	The following example specifies that set **mvr** test. Switch(config)# **mvr** Switch(config)# **no mvr** Switch# **show mvr** **MVR Running : Disabled** MVR Multicast VLAN : 1 MVR Group Range : None MVR Max Multicast Groups : 128 MVR Current Multicast Groups : 0 MVR Global query response time : 1 sec MVR Mode : compatible

mvr vlan

Syntax	**mvr vlan <VLAN-ID>**
Parameter	<VLAN-ID> The exist static vlan id
Default	Default mvr vlan id is 1
Mode	Global Configuration
Usage	Use the **mvr vlan** command to modify mvr vlan id when the mvr status is enabled. Change mvr vlan id will delete the old mvr vlan and new mvr vlan group. If there have configure source or receiver port, there will check the source must only in the mvr vlan , and receiver port must not in the mvr vlan member. You can verify settings by the **show mvr** command.
Example	The following example specifies that configure mvr vlan 2 test. **Switch(config)# vlan 2** **Switch(config)# mvr** The operation will delete groups of VLAN ID is MVR VLAN include static groups. Continue? [yes/no]:y **Switch(config)# mvr vlan 2** The operation will delete the old and new MVR VLAN groups include static MVR groups.Continue? [yes/no]:y

Switch# show mvr
MVR Running : Enabled MVR Multicast VLAN : 2 MVR Group Range : None
MVR Max Multicast Groups : 128 MVR Current Multicast Groups : 0 MVR Global query response time : 1 sec
MVR Mode : compatible

mvr group

Syntaxmvr	**group <ip-address> [<1-128>]**

Parameter	< ip-address>	IPV4 multicast address
	[<1-128>]	Contiguous series of IP addresses.

Default	None
Mode	Global Configuration
Usage	Use the **mvr group** command to configure mvr group address range when mvr is enabled. The command will delete all mvr vlan ipv4 group entry You can verify settings by the **show mvr** command
Example	The following example specifies that set mvr group range is 224.1.1.1 ~ 224.1.1.8 test. Switch(config)# mvr Switch(config)# mvr group 224.1.1.1 8 **The operation will delete the MVR VLAN groups include static MVR groups.Continue? [yes/no]:y** **Switch# show mvr** **MVR Running : Enabled MVR Multicast VLAN : 2** **MVR Group Range : 224.1.1.1 ~ 224.1.1.8** MVR Max Multicast Groups : 128 MVR Current Multicast Groups : 0 MVR Global query response time : 1 sec MVR Mode : compatible

mvr mode

Syntax	**mvr mode (dynamic | compatible)**

Parameter	(dynamic|compatible)	dynamic: Allows dynamic MVR membership on source ports compatible: does not support IGMP dynamic joins on source ports.
Default	Default is compatible.	

Mode	Global Configuration
Usage	Use the **mvr mode** command to change mvr mode when mvr is enabled. You can verify settings by the **show mvr** command.
Example	The following example specifies that set mvr mode dynamic test. Switch(config)#**mvr** Switch(config)#**mvr mode dynamic** Switch# **show mvr** MVR Running : Enabled MVR Multicast VLAN : 2 MVR Group Range : 224.1.1.1 ~ 224.1.1.8 MVR Max Multicast Groups : 128 MVR Current Multicast Groups : 0 MVR Global query response time : 1 sec **MVR Mode : dynamic**

mvr query-time

Syntax	**mvr query-time <1-10>** **no mvr query-time**
Parameter	<1-10> specifies query response time is 1~10 sec.
Default	Default is 1 sec
Mode	Global Configuration
Usage	Use the **mvr query-time** command to configure when mvr is enabled. Use the **no** form of this command to set query-time default value. You can verify settings by the **show mvr** command.
Example	The following example specifies that set mvr query-time 10 sec test. Switch(config)# **mvr** Switch(config)# **mvr query-time 10** Switch# **show mvr** MVR Running : Enabled MVR Multicast VLAN : 2 MVR Group Range : 224.1.1.1 ~ 224.1.1.8 MVR Max Multicast Groups : 128

MVR Current Multicast Groups : 0
MVR Global query response time : 10 sec
MVR Mode : dynamic

mvr port type

Syntax	**mvr type (source | receiver)** **no mvr type**	
Parameter	(source | receiver)	Source: Configure uplink ports that receive and send multicast data as source ports. Subscribers cannot be directly connected to source ports. All source ports on a switch belong to the single multicast VLAN. Receiver: Configure a port as a receiver port if it is a subscriber port and should only receive multicast data. It does not receive data unless it becomes a member of the multicast group, either statically or by using IGMP leave and join messages. Receiver ports cannot belong to the multicast VLAN.
Default	None	
Mode	Port Configuration	
Usage	Use the **mvr type** command to configure mvr port type when mvr is enabled. The source port must only belong to mvr vlan. The receiver port must not belong to mvr vlan, and port mode must be access mode. Use the **no** form of this command to set mvr type none You can verify settings by the **show mvr interface** command	
Example	The following example specifies that set gi1 fa1 is source port , fa2 is receiver port test. Switch(config)# **vlan 2** Switch(config-vlan)#**exit** Switch(config)#**mvr** Switch(config)#**mvr vlan 2** Switch(config)#**mvr group 224.1.1.1 8** Switch(config)# **interface gi1** Switch(config-if)# **switchport trunk allowed vlan 2** Switch(config-if)# **mvr type source** Switch(config-if)#**exit** Switch(config)# **interface gi2** Switch(config-if)# **switchport mode access**	

```
Switch(config-if)#mvr type receiver
Switch# show mvr interface
  Port  |  Type   | Immediate Leave
--------+---------+-----------------
 gi1    |  Source|    Disabled
 gi2    | Receiver|    Disabled
```

mvr port immediate

Syntax	**mvr immediate** **no mvr immediate**
Parameter	None
Default	Default is disabled
Mode	Port Configuration
Usage	Use the **mvr immediate** command to configure mvr support immediate leave when mvr is enabled. **Note** This command applies to only receiver ports and should only be enabled on receiver ports to which a single receiver device is connected. Use the **no** form of this command to disable immediate leave. You can verify settings by the **show mvr interface** command
Example	The following example specifies that set gi2 immediate enable test. The configure should configure mvr receiver port firstly.(eg. mvr port type)

```
Switch(config)# interface gi2
Switch(config-if)#mvr immediate
Switch(config-if)#exit
Switch(config)# exit
Switch# show mvr interface
  Port  |  Type   | Immediate Leave
--------+---------+-----------------
 gi1    |  Source|    Disabled
 gi2    | Receiver|    Enabled
```

mvr static group

Syntax	**mvr vlan <VLAN-ID> group <ip-addr> interfaces IF_PORTS no mvr vlan < VLAN-ID> group <ip-addr> interfaces IF_PORTS**

Parameter	VLAN-ID	VLAN ID (e.g. 100)
	ip-addr	IPV4 multicast address
	IF_PORTS	specifies port list to set or remove
Default	None	
Mode	Global Configuration	
Usage	Use the **mvr vlan group** command to add a static group or configure static group member ports when mvr is enabled. This command applies to only receiver ports. In compatible mode, this command applies to only receiver ports. In dynamic mode, it applies to receiver ports and source ports. When remove static mvr group all ports, the static group will be delete. Or can use **no ip igmp vlan VLAN-ID group** to delete the mvr static group. Static group can't learn dynamic port by igmp memesage. Use the **no** form of this command to delete a port in static group. If remove the last member of static group, the static group will be delete. You can verify settings by the **show mvr members** command.	
Example	The following example specifies that set mvr static group test. The configure must configure mvr receiver port firstly.(eg. mvr port type) Switch(config)# **mvr vlan 2 group 224.1.1.1 interfaces gi2** Switch# **show mvr members** Gourp IP Address | Type | Life(Sec) | Port ----------+--------+-----------+---------- 224.1.1.1 | Static| -- | gi2 **Total Number of Entry = 1**	

clear mvr members

Syntax	**clear mvr members [dynamic|static]**	
Parameter	dynamic	MVR dynamic groups
	static	MVR static groups
Default	Clear all of mvr group	
Mode	Privileged EXEC	

Usage	This command will clear the mvr groups for selected type.
Example	The following example specifies that clear all mvr groups test. Switch# **clear mvr members**

show mvr members

Syntax	**show mvr members**
Parameter	None
Default	None
Mode	Privileged EXEC
Usage	This command will display the mvr groups for all of type.
Example	The following example specifies that show mvr groups test. Switch# **show mvr members**

show mvr interface

Syntax	**show mvr interface [IF_PORTS]**
Parameter	IF_PORTS Show specifies port list configurationt
Default	None
Mode	Privileged EXEC
Usage	This command will display mvr port type and port immediate status.
Example	The following example specifies that show mvr interface test. Switch# **show mvr interface**

show mvr

Syntax	**show mvr**
Parameter	None
Default	None
Mode	Privileged EXEC
Usage	This command will display mvr global information.
Example	The following example specifies that show mvr test. Switch# **show mvr** MVR Running : Enabled MVR Multicast VLAN : 100 MVR Group Range : 224.1.1.1 ~ 224.1.1.128 MVR Max Multicast Groups : 128 MVR Current Multicast Groups : 0 MVR Global query response time : 1 sec MVR Mode : compatible

21. Port

back-pressure

Syntax	**back-pressure** **no back-pressure**
Parameter	
Default	Default back pressure state is enabled.
Mode	Interface Configuration
Usage	Use "**back-pressure**" command to make port to enable back pressure feature. Use **no** form of this command to disable back pressure feature. The only way to show this configuration is using "**show running-config**" command.

Example

This example shows how to configure port fa1 and fa2 to be protected port.

```
Switch(config)# interface gi1
Switch(config-if)# no back-pressure
```

This example shows how to show current jumbo-frmae size

```
Switch# show running-config interface gi1
interface gi1
 no back-pressure
```

clear interface

Syntax

clear interfaces *IF_PORTS* **counters**

Parameter

IF_PORTS	Specify port to clear counters.

Default

No default value for this command.

Mode

Privileged EXEC

Usage

Use "**clear interface**" command to clear statistic counters on specific ports.

Example

This example shows how to clear counters on port gi1.

```
Switch(config)# clear interfaces gi1 counters
```

This example shows how to show current counters

```
Switch# show interfaces gi1
  Hardware is Fast Ethernet
  Auto-duplex, Auto-speed, media type is Copper
  flow-control is off
     0 packets input, 0 bytes, 0 throttles
     Received 0 broadcasts (0 multicasts)
     0 runts, 0 giants, 0 throttles
     0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored
     0 multicast, 0 pause input
     0 input packets with dribble condition detected
     0 packets output, 0 bytes, 0 underrun
     0 output errors, 0 collisions, 0 interface resets
     0 babbles, 0 late collision, 0 deferred
     0 PAUSE output
```

description

Syntax

description *WORD<1-32>*
no description

Parameter

WORD<1-32>	Up to 32 characters descriping this interface.

Default

Default port description is empty.

Mode

Interface Configuration

Usage

Use "**description**" command to give the port a name to identify it easily.

If description includes space character, please use double quoted to wrap it.

Use **no** form to restore description to empty string.

Example

This example shows how to modify port descriptions.

```
Switch(config)# interface gi1
Switch(config-if)# description userport
Switch(config-if)# exit
Switch(config)# interface gi2
Switch(config-if)# description "uplink port"
```

This example shows how to show current port description on interface gi1 and gi2

```
Switch# show interfaces gi1-2 status
Port   Name                 Status       Vlan   Duplex   Speed
Type
gi1    userport             notconnect   1      auto     auto
Copper
gi2    uplink port          notconnect   1      auto     auto
Copper
```

duplex

Syntax

duplex (**auto** | **full** | **half**)

Parameter

auto	Enable AUTO duplex configuration.
full	Force full duplex operation.
half	Force half-duplex operation.

Default

Default port duplex is auto.

Mode

Interface Configuration

Usage Use "**duplex**" command to change port duplex configuration.

Example This example shows how to modify port duplex configuration.

```
Switch(config)# interface gi1
Switch(config-if)# duplex full
Switch(config-if)# exit
Switch(config)# interface gi2
Switch(config-if)# duplex half
```

This example shows how to show current speed configuration

```
Switch# show running-config interfaces gi1-2
interface gi1
 duplex full
interface gi2
 duplex half
```

This example shows how to show current interface link speed

```
Switch# show interfaces fa1-2 status
Port   Name                Status       Vlan   Duplex   Speed     Type
Gi1                        connected    1      full     a-100M    Copper
Gi2                        connected    1      half     a-100M    Copper
```

eee

Syntax
eee
no eee

Parameter

Default Default eee state is disabled.

Mode Interface Configuration

Usage Use "**eee**" command to make port to enable the energy efficient Ethernet feature.

Use **no** form of this command to disable eee.

The only way to show this configuration is using "**show running-config**" command.

Example

This example shows how to configure port fa1 and fa2 to be protected port.

```
Switch(config)# interface gi1
Switch(config-if)# eee
```

This example shows how to show current jumbo-frmae size

```
Switch# show running-config interface gi1
interface gi1
 eee
```

flowcontrol

Syntax

flowcontrol (**auto** | **off** | **on**)
no flowcontrol

Parameter

auto	Enable AUTO flow-control configuration.
off	Force flow-control as disabled.
on	Force flow-control as enabled.

Default

Default port flow control is off.

Mode

Interface Configuration

Usage

Use "**flowcontrol**" command to change port flow control configuration.

Use **no** form to restore flow control to default (off) configuration.

Example

This example shows how to modify port duplex configuration.
Switch(config)# **interface gi1**
Switch(config-if)# **flowcontrol on**

This example shows how to show current flow control configuration
Switch# **show interfaces gi1**
Hardware is Fast Ethernet
Full-duplex, Auto-speed, media type is Copper
flow-control is on
0 packets input, 0 bytes, 0 throttles Received 0 broadcasts (0 multicasts)
0 runts, 0 giants, 0 throttles
0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored
0 multicast, 0 pause input
0 input packets with dribble condition detected
379 packets output, 31981 bytes, 0 underrun
0 output errors, 0 collisions, 0 interface resets
0 babbles, 0 late collision, 0 deferred
0 PAUSE output

jumbo-frame

Syntax	**jumbo-frame** *<1518-9216>*
Parameter	*<1518-10000>* Maximum frame size
Default	Default maximum frame size is 1522.
Mode	Global Configuration
Usage	Use "**jumbo-frame**" command to modify maximum frame size. The only way to show this configuration is using "**show running-config**" command.

Example	This example shows how to modify maximum frame size on fa1 to 9216 bytes.
	`Switch(config)# jumbo-frame 9216`
	
	This example shows how to show current jumbo-frmae size
	`Switch# show running-config`
	`jumbo-frame 9216`

protected

Syntax	**protected no** **protected**
Default	Default protected state is no protected.
Mode	Interface Configuration
Usage	Use "**protected**" command to make port to be protected. Protected port is only allowed to communicate with unprotected port. In other words, protected port is not allowed to communicate with another protected port. Use **no** form to make port unprotected.
Example	This example shows how to configure port fa1 and fa2 to be protected port. `Switch(config)# interface range fa1-2` `Switch(config-if-range)# protected` This example shows how to show current protected port state. `Switch# show interfaces fa1-2 protected` `Port	Protected State` `-------+----------------` `gi1 |enabled`  `gi2 |enabled`

show interface

Syntax

show interfaces *IF_PORTS*
show interfaces *IF_PORTS* **status**
show interfaces *IF_PORTS* **potected**

Parameter

IF_PORTS	Specifiy port to show.

Default

No default value for this command.

Mode

Privileged EXEC

Usage

Use "**show interface**" command to show detail port counters, parameters and status.

Use "**show interface status**" command to show brief port status.

Use "**show interface protected**" command to show protected status.

Example

This example shows how to show current counters

```
Switch# show interfaces gi1
  Hardware is Fast Ethernet
  Auto-duplex, Auto-speed, media type is Copper
  flow-control is off
     0 packets input, 0 bytes, 0 throttles
     Received 0 broadcasts (0 multicasts)
     0 runts, 0 giants, 0 throttles
     0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored
     0 multicast, 0 pause input
     0 input packets with dribble condition detected
     0 packets output, 0 bytes, 0 underrun
     0 output errors, 0 collisions, 0 interface resets
     0 babbles, 0 late collision, 0 deferred
     0 PAUSE output
```

This example shows how to show current protected port state.

```
Switch# show interfaces gi1-2 protected
Port     | Protected State
-------+-----------------
    Gi1 |enabled
    Gi2 |enabled
```

This example shows how to show current port status

```
Switch# show interfaces gi1-2 status
Port  Name                Status      Vlan  Duplex  Speed    Type
fa1                       connected   1     full    a-100M   Copper
```

speed

Syntax

speed (10 | 100 | 1000)
speed auto [(10 | 100 | 1000 | 10/100)]

speed nonegtiate
no speed nonegtiate

Parameter

10	Force 10 Mbps operation.
100	Force 100 Mbps operation.
1000	Force 1000 Mbps operation.
auto	Enable AUTO speed configuration_

Default

Default port speed is auto with all available abilities.

Mode

Interface Configuration

Usage

Use "**speed**" command to change port speed configuration. The speed is only able to configure to the physical maximum speed. For example, in fast Ethernet port, speed 1000 is not available.

You cannot configure the speed on the SFP module ports, but you can configure the speed to not negotiate (nonegotiate) if it is connected to a device that does not support autonegotiation.

Example

This example shows how to modify port speed configuration.

```
Switch(config)# interface gi1
Switch(config-if)# speed 100
Switch(config-if)# exit
Switch(config)# interface gi2
Switch(config-if)# speed auto 10/100
```

This example shows how to show current speed configuration

```
Switch# show running-config interfaces gi1-2
interface gi1
 speed 100
interface gi2
 speed auto 10/100
```

This example shows how to show current interface link speed

```
Switch# show interfaces fa1-2 status
Port   Name                 Status       Vlan   Duplex   Speed     Type

gi1                         connected    1      a-full   a-100M    Copper
gi2                         connected    1      a-full   a-100M    Copper
```

shutdown

Syntax

shutdown
no shutdown

Parameter

Default

Default port admin state is no shutdown.

Mode

Interface Configuration

Usage

Use "**shutdown**" command to disable port and use "**no shutdown**" to enable port. If port is error disabled by some reason, use "no shutdown" command can also recovery the port manually.

Example

This example shows how to modify port duplex configuration.

```
Switch(config)# interface gi1
Switch(config-if)# shutdown
```

This example shows how to show current admin state configuration

```
Switch# show running-config interfaces gi1
interface gi1
 shutdown
```

This example shows how to show current link status

```
Port   Name      Status     Vlan   Duplex   Speed   Type
gi1              disable    1      full     auto    Copper
```

22. Port Error Disable

errdisable recovery cause

Syntax

errdisable recovery cause (all|acl|arp-inspection|bpduguard|broadcast-flood|dhcp-rate-limit|psecure-violation|selfloop|unicast-flood|unknown-multicastflood)
no errdisable recovery cause (all|acl|arp-inspection|bpduguard|broadcast-flood|dhcp-rate-limit|psecure-violation|selfloop|unicast-flood|unknown-multicastflood)

Parameter

all	Enable timer to recover from acl causes.
acl	Enable timer to recover from all causes.
arp-inspection	Enable timer to recover from arp rate limit causes.

bpduguard	Enable timer to recover from bpdu guard causes.
broadcast-flood	Enable timer to recover from broadcast flood causes.
dhcp-rate-limit	Enable timer to recover from dhcp rate limit causes.
psecure-violation	Enable timer to recover from port security causes.
selfloop	Enable timer to recover from selfloop causes.
unicast-flood	Enable timer to recover from unicast flood causes.
unknown- multicastflood	Enable timer to recover from unknown multicast flood causes.

Default Error disable recovery is disabled for all cause.

Mode Global Configuration

Usage Ports would be disabled because of the invalid actions detected by protocols. To enable the port error disable recovery from the specific cause, use the command **errdisable recovery cause** in the Global Configuration mode.

Example The following example enables the port error disable recovery for the STP BPDU Guard and self-loog cause.

```
Switch(config)# errdisable recovery cause bpduguard
Switch(config)# errdisable recovery cause selfloop
```

errdisable recovery interval

Syntax **errdisable recovery interval** *seconds*

Parameter	**<30-86400>**	Interval with the number of seconds

Default The default recovery time is 300 seconds.

Mode Global Configuration

Usage To set the recovery time of the error disabled ports, use the command **errdisable recovert interval** in the Global Configuration mode.

Example The following example set the agimg time to 500 seconds.

```
Switch(config)# errdisable recovery interval 60
```

show errdisable recovery

Syntax	**show errdisable recovery**
Parameter	N/A
Default	N/A
Mode	Privileged EXEC
Usage	To show the error disable configuration and the interfaces in the error disabled state, use the command **show errdisable recovery** in the Privileged EXEC mode.
Example	The following example shows the error disable configuration, and the interfaces in the error disabled state.

```
Switch# show errdisable recovery
 ErrDisable Reason          | Timer Status
----------------------------+---------------
                 bpduguard | enabled
                  selfloop | enabled
            broadcast-flood | disabled
  unknown-multicast-flood | disabled
              unicast-flood | disabled
                        acl | disabled
          psecure-violation | disabled
            dhcp-rate-limit | disabled
             arp-inspection | disabled

Timer Interval : 60 seconds

Interfaces that will be enabled at the next timeout:

Port |  Error Disable Reason     | Time Left
-----+---------------------------+------------
```

23. Port Security

port-security (Global)

Syntax	**port-security** **no port-security**
Parameter	None

Default	Default is disabled
Mode	Global Configuration
Usage	The "**port-security**" command enables the port security functionality globally. Use the **no** form of this command to disable. You can verify settings by the **show port-security** command.
Example	The following example shows how to enable port security switch(config)# **port-security** switch# **show port-security** port-security is: Enabled

port-security (Interface)

Syntax	**port-security** **no port-security**
Parameter	None
Default	Default is disabled
Mode	Port Configuration
Usage	The "**port-security**" command enables the port security functionality on this port. Use the **no** form of this command to disable You can verify settings by the **show port-security interface** command.
Example	The following example shows how to enable port security on interface fa1 switch(config)# **interface gi1** switch(config-if)# **port-security** switch# **show port-security interfaces gi1** Port | Security | CurrentAddr | Action --------+----------+----------+---------- gi1 | Enabled (1) | 0 | Discard

port-security address-limit

Syntax

port-security address-limit *<1-256>* **action** (forward|discard|shutdown)
no port-security address-limit

Parameter

<1-256>	Number of limitation.
forward	Forward.
discard	Discard.
shutdown	Shutdown Port

Default

The address-limit default is 1 and action is "drop".

Mode

Port Configuration

Usage

Use the "**port-security address-limit**" command to set the learning-limit number and the violation action.
Use the **no** form of this command to restore the default settings.
You can verify settings by the **show port-security interface** command.

Example

The following example shows how to enable port security on port 1 and set the learning limit number to 10.

```
switch(config)# interface gi1
switch(config-if)# port-security address-limit 10 action discard
switch(config-if)# port-security
switch# show port-security interfaces gi1
  Port    |  Mode  |     Security     | CurrentAddr |      Action
----------+--------+------------------+-------------+-------------------
    gi1   | Dynamic |  Enabled (  10) |      0      |     Discard
```

show port-security

Syntax

show port-security

Parameter

None

Default

No default value for this command.

Mode	Privileged EXEC
Usage	Use "**show port-security**" command to show port-security global information.
Example	This example shows how to show port-security configurations. `Switch# show port-security` port-security is: Enabled

show port-security interface

Syntax	**show port-security interface** *IF_PORTS*
Parameter	*IF_PORTS* Select port to show port-security configurations.
Default	No default value for this command.
Mode	Privileged EXEC
Usage	Use "**show port-security interfaces**" command to show port-security information of the specified port.
Example	This example shows how to show port-security configurations on interface fa1. `Switch# show port-security interfaces gi1` Port | Security | CurrentAddr | Action --------+--------------------+-------------+------------- gi1 | Enabled (10) | 0 | Discard

24. Protocol VLAN

vlan protocol-vlan group (Global)

Syntax	**vlan protocol-vlan group** <1-8> **frame-type** (ethernet_ii|llc_other|snap_1042) **protocol-value** VALUE **no vlan protocol-vlan group** <1-8>

Parameter		
	<1-8>	Group index
	(ethernet_ii|llc_other|snap_1042)	Specify protocol based frame type
	protocol-value	Protocol value

Default	no protocol vlan group are configured
Mode	Global Configuration
Usage	Use the **vlan protocol-vlan group** Global Configuration mode command to add protocol vlan group with spefied proto type and value. Use the **no** form of this command to remove protocol vlan group setting. You can verify your setting by entering the **show vlan proto-vlan Privileged EXEC** command
Example	The following example show how to configure protocol vlan group: Switch(config)# **vlan protocol-vlan group 1 frame-type ethernet_ii protocol-value 0x806** Switch(config)# **vlan protocol-vlan group 2 frame-type llc_other protocol-value 0x800** Switch# **show vlan protocol-vlan**

```
Group ID  |    Status  |     Type     |     value
 ---------+------------+--------------+----------
    1      | Enabled    |  Ethernet    |    0x0806
    2      | Enabled    |  LLC other   |    0x0800
    3      | Disabled   |     --       |      --
    4      | Disabled   |     --       |      --
    5      | Disabled   |     --       |      --
    6      | Disabled   |     --       |      --
    7      | Disabled   |     --       |      --
    8      | Disabled   |     --       |      --
```

vlan protocol-vlan group (Interface)

Syntax	**vlan protocol-vlan group** <1-8> **vlan** <1-4094> **no vlan protocol-vlan group** <1-8>

Parameter		
	<1-8>	Group index
	<1-4094>	VLAN ID (e.g. 100).

Default	In default all group are not binding to any interface.
Mode	Interface configuration
Usage	Use the **vlan protocol-vlan binding** Interface Configuration mode command to binding protocol VLAN Group on specified interfaces,

	Use the **no** form of this command to cancel protocol VLAN Group Binding. You can verify your setting by entering the **show vlan protocol-vlan interfaces IF_PORTS Privileged EXEC** command
Example	The following example how to configure Protocol VLAN function on specified interfaces.. Switch(config)# **interface gi1** Switch(config-if)# **vlan protocol-vlan group 1 vlan 2** Switch(config-if)# **vlan protocol-vlan group 2 vlan 3** Switch# **show vlan protocol-vlan interfaces fa1** Port fa1 : Group 1 Status : Enabled VLAN ID : 2 Group 2 Status : Enabled VLAN ID : 3 Group 3 Status : Disabled Group 4 Status : Disabled Group 5 Status : Disabled Group 6 Status : Disabled Group 7 Status : Disabled Group 8 Status : Disabled

show vlan protocol-vlan

Syntax	**show vlan protocol-vlan [group <1-8>]**
Parameter	<1-8> Specify protocol vlan group to display
Default	N/A
Mode	Privileged EXEC
Usage	Use the **show vlan proto-vlan** command in EXEC mode to display Proto VLAN group configuration

Example

The following example how to display Proto VLAN group configuration

```
Switch# show vlan protocol-vlan
Group ID   |    Status    |     Type     |     value
 ----------+--------------+--------------+-----------------
    1       | Enabled      |  Ethernet    |     0x0806
    2       | Enabled      |  LLC other   |     0x0800
    3       | Disabled     |     --       |       --
    4       | Disabled     |     --       |       --
    5       | Disabled     |     --       |       --
    6       | Disabled     |     --       |       --
    7       | Disabled     |     --       |       --
    8       | Disabled     |     --       |       --
```

show vlan protocol-vlan interfaces

Syntax

show vlan protocol-vlan interfaces IF_PORTS

Parameter

IF_PORTS	Specify interfaces protocol vlan to display

Default

N/A

Mode

Privileged EXEC

Usage

Use the **show vlan protocol-vlan interface** command in EXEC mode to display the Protocol VLAN interfaces setting

Example

The following example shows how to display the Protocol VLAN interfaces setting

```
Switch# show vlan protocol-vlan interfaces gi1
Port gi1 :
  Group 1
    Status      : Enabled
    VLAN ID     : 2
  Group 2
    Status      : Enabled
    VLAN ID     : 3
  Group 3
    Status      : Disabled
  Group 4
    Status      : Disabled
  Group 5
    Status      : Disabled
  Group 6
```

```
    Status      : Disabled
  Group 7
    Status      : Disabled
  Group 8
    Status      : Disabled
```

25. QoS

qos

Syntax	**qos** **no qos**
Default	Default qos is disabled.
Mode	Global Configuration
Usage	Use "**qos**" command to enable quality of service which according to basic trust type to assign queue for packets, and packets with higher priority are able to send first. Use no form of this command to disable quality of service.

Example	This example shows how to change qos to basic mode.
	`Switch(config)# qos`
	This example shows how to check current qos mode.
	`Switch# show qos`
	`QoS Mode: basic`
	`Basic trust: cos`

qos cos

Syntax	**qos cos** *<0-7>*
Parameter	**cos** <0-7> Specify the default VPT value.
Default	Default CoS value for interface is 0.
Mode	Interface Configuration
Usage	Sometimes, there is no qos information in the packets, such as CoS, DSCP, IP Precedence. But we still can give the priority for packets by configuring the interface default cos value. If there is no qos information in the packets, the device will use this default cos value and find the cos-queue map to get the final destination queue. Use "**qos cos**" command to assign port default cos value.

Example This example shows how to configure default cos value 7 on interface gi1.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# qos cos 7
Switch(config-if)# end
Switch# show qos interface GigabitEthernet 1
   Port   |  CoS   |  Trust State  | Remark Cos | Remark DSCP | Remark IP Prec
--------+-------+--------------+------------+-------------+---------
     gi1 |    7   |       enabled  |    disabled |    disabled  | disabled |
```

qos map

Syntax

qos map (**cos-queue** | **dscp-queue** | **precedence-queue**) *SEQUENCE* **to** *<1-8>*

qos map (**queue-cos** | **queue-precedence**) *SEQUENCE* **to** *<0-7>*

qos map queue-dscp *SEQUENCE* **to** *<0-63>*

Parameter

cos-queue	Map assigned CoS values to select an egress queue. Use the command no form to return to the default value
dscp-queue	Modify the DSCP to queue map
precedence-queue	Modify the IP Precedence to queue map
queue-cos	Modify the queue to CoS map
queue-dscp	Modify the queue to DSCP map
queue-precedence	Modify the queue to ip precedence map
SEQUENCE	Specify the cos, dscp, precedence or queue with one or multiple values.
<1-8>	Specify th queue id
<0-7>	Specify the cos or precedence values
<0-63>	Specify the dscp values

Default The default values of cos-queue are showing in the following table.

CoS	Queue ID
0	2
1	1
2	3
3	4
4	5
5	6
6	7
7	8

The default values of dscp-queue are showing in the following table.

DSCP	Queue ID
0~7	1
8~15	2
16~23	3
24~31	4
32~39	5
40~47	6
48~55	7
56~63	8

The default values of ip precedence are showing in the following table.

IP Precedence	Queue ID
0	1
1	2
2	3
3	4
4	5
5	6
6	7
7	8

The default values of queue-cos are showing in the following table.

Queue ID	CoS
1	1
2	0
3	2
4	3
5	4
6	5
7	6
8	7

The default values of queue-dscp are showing in the following table.

Queue ID	DSCP
1	0
2	8
3	16
4	24
5	32
6	40
7	48
8	56

The default values of queue-precedence are showing in the following table.

Queue ID	IP Precedence
1	0
2	1
3	2
4	3
5	4
6	5
7	6
8	7

Mode Global Configuration

Usage According to different trust type, packets will be assigned to different queue based on the specific qos map. For example, if the trust type is trust cos, the

device will get the cos value in packet and reference the cos-queue mapping to assign the correct queue.

The queue to cos, dscp or precedence maps are used by remarking function. If the port remarking feature is enabled, the remarking function will reference these 3 tables to remark packets.

Example

This example shows how to map cos 6 and 7 to queue 1.

```
Switch(config)# qos map cos-queue 6 7 to 1
Switch# show qos map cos-queue
CoS to Queue mappings
   COS    0  1  2  3  4  5  6  7
-------------------------------
 Queue    2  1  3  4  5  6  1  1
```

This example shows how to map queue 4 and 5 to cos 7.

```
Switch(config)# qos map queue-cos 4 5 to 7
Switch# show qos map queue-cos
Queue to CoS mappings
 Queue    1  2  3  4  5  6  7  8
-------------------------------
   CoS    1  0  2  7  7  5  6  7
```

qos queue

Syntax

qos queue strict-priority-num *<0-8>*
qos queue weight *SEQUENCE*
show qos queueing

Parameter

strict-priority-num <0-8>	Specify the strict priority queue number
weight SEQUENCE	Specify the non-strict priority queue weight value. The valid queue weight value is from 1 to 127.

Default

Default strict priority queue number is 8, it means all queues are strict priority queue.

The default queue weight for each queue is shown in following table.

Queue ID	Queue Weight
1	1
2	2
3	3
4	4
5	5
6	9
7	13
8	15

Mode	Global Configuration

Usage

The device support total 8 queues for QoS queueing. It is able to set the queue to be strict priority queue or weighted queue to prevent starvation. The queue with higher id value has higher priority.
First, you need to decide how many strict priority queue you need. The strict priority queue will always occupy the higher priority queue. For example, if you specify the strict priority number to be 2, then the queue 7 and 8 will be the strict priority queues and the others are weighted queues.
After you setup the number of strict priority queue, you need to setup the weight for the weighted queues by using "qos queue weight" command. And the bandwidth will shared by the weight you configured between these weighted queues.

Example

This example shows how to setup device with 3 strict priority queues and give other weighted queues with weight 5, 10, 15, 20, 25.

```
Switch(config)# qos queue strict-priority-num 3
Switch(config)# qos queue weight 5 10 15 20 25
Switch# show qos queueing
qid-weights     Ef - Priority
1 -   5         dis- N/A
2 -  10         dis- N/A
3 -  15         dis- N/A
4 -  20         dis- N/A
5 -  25         dis- N/A
6 - N/A         ena- 6
7 - N/A         ena- 7
8 - N/A         ena- 8
```

qos remark

Syntax

qos remark (**cos** | **dscp** | **precedence**)
no qos remark (**cos** | **dscp** | **precedence**)

Parameter

cos	Remarking CoS value.
dscp	Remarking DSCP value.
precedence	Remarking ip precedence value.

Default

Default CoS remarking is disabled.
Default DSCP remarking is disabled.
Default IP Precedence remarking is disabled.

Mode	Interface Configuration

Usage

QoS remarking feature allow you to change priority information in packets based on egress queue. For example, you want all packets egress from interface fa1 queue 1 to remark the cos value to be 5 for next tier of device, you can enable the cos remarking feature on fa1 and configure the queue-cos

map for queue 1 map to cos 5.

Use "**qos remark**" command to enable remarking feature on specific type. And use "**no qow remark**" command to disable it.

Example

This example shows how to enable remarking features on interface fa1.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# qos remark cos
Switch(config-if)# qos remark dscp
Switch(config-if)# qos remark precedence
Switch(config-if)# end
Switch# show qos interface GigabitEthernet 1
   Port  |  CoS   |  Trust State  | Remark Cos | Remark DSCP | Remark IP Prec
--------+-------+--------------+------------+-------------+--------
     gi1 |    0   |       enabled  |    enabled |    enabled  |  enabled |
```

qos trust

Syntax

qos trust (**cos** | **cos-dscp** | **dscp** | **precedence**)

Parameter

cos	Specify trust mode cos
cos-dscp	Specify trust mode Cos-DSCP.
dscp	Specify trust mode DSCP
precedence	Specify trust mode precedence

Default

Default QoS trust type is cos.

Mode

Global Configuration

Usage

In QoS basic mode, there are 4 trust types for device to judge the appropriate queue of the packets. This command is able to switch between these trust types.

CoS:
IEEE 802.1p defined 3bits priority value in vlan tag. Trust this value in packets and assign queue according to cos-queue map.

DSCP:
IETF RFC2474 defined 6bits priority value in IP packet (highest 6bits in ToS field). Trust this value in packets and assign queue according to dscp-queue map.

IP Precedence:
The highest 3bits priority value in IP packet ToS field. Trust this value in packets and assign queue according to precedence-queue map.

CoS-DSCP:
Trust DSCP for IP packets and assign queue according to dscp-queue map. Trust CoS for non-IP packets and assign queue according to cos-queue map.

Example

This example shows how to change qos basic mode trust types.

```
Switch(config)# qos trust cos
Switch(config)# qos trust cos-dscp
```

```
Switch(config)# qos trust dscp
Switch(config)# qos trust precedence
```

This example shows how to check current qos trust type.

```
Switch# show qos
QoS Mode: basic
Basic trust: ip-precedence
```

qos trust (Interface)

Syntax

qos trust
no qos trus

Parameter

Default

Default interface qos trust state is enabled.

Mode

Interface Configuration

Usage

After QoS function is enabled in basic mode, the device also support per interface enable/disable the qos function. If the trust state on interface is enabled, all ingress packets of this interface will remap according to the trust type and the qos maps. Otherwise, all ingress packets will assign to queue 1.

Use "**qos trust**" to enable trust state on interface and use "**no qos trust**" to disable trust state on interface.

Example

This example shows how to disable qos trust state on interface fa1.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# no qos trust
Switch(config-if)# end
Switch# show qos interface GigabitEthernet 1
   Port   |  CoS   |  Trust State  | Remark Cos | Remark DSCP | Remark IP Prec
--------+-------+--------------+------------+-------------+----------
     gi1 |    0   |       disabled  |    disabled |    disabled  |  disabled |
```

show qos

Syntax

show qos

Parameter

Default

No default value for this command.

Mode

Privileged EXEC

Usage	Use "**show qos**" command to show qos state and trust type.

Example	This example shows how to check current qos mode.
	`Switch# show qos`
	`QoS Mode: basic`
	`Basic trust: cos`

show qos interface

Syntax	**show qos interface** *IF_PORTS*

Parameter	*IF_PORTS*	Select port to show qos configurations.

Default	No default value for this command.

Mode	Privileged EXEC

Usage	Use "**show qos interfaces**" command to show port default cos ,remarking state and remarking type state informations.

Example

This example shows how to show qos configurations on interface fa1.

```
Switch# show qos interface GigabitEthernet 1
   Port  |  CoS   |  Trust State  | Remark Cos | Remark DSCP | Remark IP Prec
--------+-------+---------------+------------+-------------+-------
     gi1 |    7   |       enabled  |    disabled |    disabled  |  disabled |
```

show qos map

Syntax	**show qos map** [(**cos-queue** | **dscp-queue** | **precedence-queue** | **queue-cos** | **queue-dscp** | **queue-precedence**)]

Parameter	**cos-queue**	CoS to Queue mapping.
	dscp-queue	DSCP to Queue mapping.
	precedence-queue	IP Precedence to Queue mapping.
	queue-cos	Queue to CoS mapping.
	queue-dscp	Queue to DSCP mapping.
	queue-precedence	Queue to IP Precedence mapping.

Default	No default value for this command.

Mode Privileged EXEC

Usage Use "**show qos map**" command to show all kinds of mapping for qos remapping and remarking features.

Example This example shows how to show all qos maps.

```
Switch(config)# show qos map

CoS to Queue mappings
COS 0   1   2   3   4   5   6   7
--------------------------------
Queue   2   1   3   4   5   6   7   8

DSCP to Queue mappings
d1: d2   0   1   2   3   4   5   6   7   8   9
---------------------------------- 0:  1   1   1   1   1   1   1
     1   2   2
1:   2   2   2   2   2   2   3   3   3   3

```

show qos queueing

Syntax **show qos queueing**

Parameter	
Default	No default value for this command.
Mode	Privileged EXEC
Usage	Use "**show qos queueing**" command to show qos queueing information.

Example	This example shows how to check current qos queueing information.
	`Switch# show qos queueing`
	`qid-weights  Ef - Priority`
	`1 -  3  dis- N/A`
	`2 -  5  dis- N/A`
	`3 - N/A  ena- 3`
	`4 - N/A  ena- 4`
	`5 - N/A  ena- 5`
	`6 - N/A  ena- 6`
	`7 - N/A  ena- 7`
	`8 - N/A  ena- 8`

26. Rate Limit

rate limit egress

Syntax	**rate-limit egress** *<16-1000000>* **no rate-limit egress**
Parameter	*<0-1000000>* The average traffic rate in Kbps, must be a multiple of 16.
Default	Default rate limit is disabled.
Mode	Interface configuration
Usage	Use the "**rate-limit egress"** command to configure the egress port shaper. Use the **no** form of this command to disable the shaper. You can verify your setting by entering the **show running-config interfaces** command.

Example	The following example show how to configure ingress port rate limit and egress port shaper.
	`Switch(config)# interfaces gi1`
	`Switch(config-if)# rate-limit egress 2048`
	`Switch# show running-config interfaces gi1`
	`interface gi1`
	`  rate-limit egress 2048`

rate limit egress queue

Syntax	**rate-limit egress queue** *<1-8> <16-1000000>* **no rate-limit egress queue** *<1-8>*

Parameter	<1-8>	queue id
	<0-1000000>	The average traffic rate in Kbps, must be a multiple of 16.
Default	Default queue rate limit is disabled.	
Mode	Interface configuration	
Usage	Use the "**rate-limit egress queue"** command to configure the egress queue shaper. Use the **no** form of this command to disable the queue shaper. You can verify your setting by entering the **show running-config interfaces** command.	

Example	The following example show how to configure ingress port rate limit and egress port shaper.
	`Switch(config)# interfaces gi1`
	`Switch(config-if)# rate-limit egress queue 3 2048`
	`Switch# show running-config interfaces gi1`
	`interface gi1`
	`rate-limit egress queue 3 2048`	

rate limit ingress

Syntax	**rate-limit ingress <16-1000000>** **no rate-limit ingress**

Parameter	*<16-1000000>*	The average traffic rate in Kbps, must be a multiple of 16.
	<1-8>	queue id

Default	Rate limiting is disabled.
Mode	Interface configuration
Usage	Use the "**rate-limit ingress"** command to limit the incoming traffic rate on a port. Use the **no** form of this command to disable the rate limit. You can verify your setting by entering the **show running-config interfaces** command

Example	The following example show how to configure ingress port rate limit.
	
	`Switch(config)# interfaces gi1`
	`Switch(config-if)# rate-limit ingress 128`
	`Switch# show running-config interfaces gi1`
	`interface gi1`
	`rate-limit ingress 128`

27. RMON

rmon event

Syntax	**rmon event <1-65535> [log] [trap COMMUNITY] [description DESCRIPTION] [owner NAME]** **no rmon event <1-65535>**
Parameter	**<1-65535>** index of event. **[log]** enable log for event. **[trap COMMUNITY]** enable trap for event **[description DESCRIPTION]** description of event (0~127 charactors) **[owner NAME]** owner name of event (0~31 charactors).
Default	No default is defined.
Mode	Global Configuration

Usage

Use the **rmon event** command to add or modify a RMON evnet entry.
Use the **no** form of this command to delete.
You can verify settings by the **show rmon event** command.

Example

The example shows how to add RMON event entry with log and trap action and then modify it action to log only.

```
switch(config)# rmon event 1 log trap public description test owner admin
switch(config)# show rmon event 1
Rmon Event Index        1
Rmon Event Type       : Log and
Trap Rmon Event Community :
public Rmon Event Description : test
Rmon Event Last Sent  :
Rmon Event Owner      : admin

switch(config)# rmon event 1 log description test owner admin
switch(config)# show rmon event 1
Rmon Event Index        1
Rmon Event Type       : Log
Rmon Event Community : public
Rmon Event Description : test
Rmon Event Last Sent  :
Rmon Event Owner      : admin
```

rmon alarm

Syntax

rmon alarm <1-65535> interface IF_PORT (drop-events|octets|pkts|broadcast-pkts|multicast-pkts|crc-align-errors|undersize-pkts|oversize-pkts|fragments|jabbers|collisions|pkts64octets|pkts65to127octets|pkts128to255octets|pkts256to511octets|pkts512to1023octets|pkts1024to1518octets) <1-2147483647> (absolute|delta) rising <0-2147483647> <0-65535> falling <0-2147483647> <0-65535> startup (rising|rising-falling|falling) [owner NAME]
no rmon alarm <1-65535>

Parameter

<1-65535>	index of event
IF_PORT	Specify the interface to sample
(variable)	Specify a mib object to sample
<1-2147483647>	Specify the time in seconds that the alarm monitors the MIB variable.
(absolute|delta)	Specify absolute to compare sample counter absolutely. Specify delta to compare delta counter between samples
<0-2147483647>	Specify a number which the alarm trigger rising event
<0-65535>	Specify event index when the rising threshold exceeds.

	<0-2147483647>	Specify a number which the alarm trigger falling event
	<0-65535>	Specify event index when the falling threshold exceeds.
	(rising|rising- falling|falling)	**Specify only to how rising or falling startup event. Or show either rising or falling startup event.**
	[owner NAME]	(Optional) Specify owner of alarm.

Default

No default is defined.

Mode

Global Configuration

Usage

Use the **rmon alarm** command to add or modify a RMON alarm entry.
Before add alarm entry, at least one event entry must be added.
Use the **no** form of this command to delete.
You can verify settings by the **show rmon alarm** command.

Example

The example shows how to add RMON alarm entry that sample interface fa1 packets delta count every 300 seconds. Trigger event index 1 if over than rising threshold 10000, trigger event index 2 if lower than falling threshold.

switch(config)# **rmon event 1 log**
switch(config)# **rmon event 2 log**

Switch(config)# **rmon alarm 1 interface gi1 pkts 300 delta rising 10000 1 falling 100 1 startup rising-falling owner admin**

Rmon Alarm Index 1
Rmon Alarm Sample Interval 300
Rmon Alarm Sample Interface : gi1
Rmon Alarm Sample Variable : Pkts
Rmon Alarm Sample Type : delta
Rmon Alarm Type : Rising or Falling
Rmon Alarm Rising Threshold : 10000
Rmon Alarm Rising Event 1
Rmon Alarm Falling Threshold 100
Rmon Alarm Falling Event 1
Rmon Alarm Owner : admin

rmon history

Syntax

rmon history <1-65535> interface IF_PORT [buckets <1-65535>] [interval <1-3600>] [owner NAME]
no rmon history <1-65535>

Parameter		
	<1-65535>	Specify history index to create or modify.
	IF_PORT	Specify the interface to sample

[bucket <1-65535>]	**(Optional) Specify the maximum number of buckets.**
[interval <>1-3600]	(Optional) Specify time interval for each sample
[owner NAME]	(Optional)Specify owner of history

Default No default is defined.

Mode Global Configuration

Usage

Use the **rmon history** command to add or modify a RMON history entry.
Use the **no** form of this command to delete.
You can verify settings by the **show rmon history** command.

Example

The example shows how to add RMON history entry that monitor interface gi1 every 60 seconds and then modify it to monitor every 30 seconds.

```
switch(config)# rmon history 1 interface gi1 interval 60 owner admin
switch(config)# show rmon history 1
Rmon History Index        1
Rmon Collection Interface: gi1
Rmon History Bucket       50
Rmon history Interval     60
Rmon History Owner        : admin

switch(config)# rmon history 1 interface gi1 interval 30 owner admin
switch(config)# show rmon history 1
Rmon History Index        1
Rmon Collection Interface: gi1
Rmon History Bucket       50
Rmon history Interval     30
Rmon History Owner        : admin
```

clear rmon interfaces statistics

Syntax **clear rmon interfaces IF_PORTS statistics**

IF_PORTS	specifies ports to clear

Default No default is defined

Mode Privileged EXEC

Usage

Use the **clear rmon interfaces statistics** command to clear RMON etherStat statistics those are recorded on interface.
You can verify results by the **show rmon interface statistics** command.

Example

The example shows how to clear RMON etherStat statistics on interface gi1.

```
switch# clear rmon interfaces gi1 statistics
switch# show rmon interfaces gi1 statistics
==== Port gi1 ==============================
etherStatsDropEvents            0
etherStatsOctets                0
etherStatsPkts                  0
etherStatsBroadcastPkts         0
etherStatsMulticastPkts         0
etherStatsCRCAlignErrors        0
etherStatsUnderSizePkts         0
etherStatsOverSizePkts          0
etherStatsFragments             0
etherStatsJabbers               0
etherStatsCollisions            0
etherStatsPkts64Octets          0
etherStatsPkts65to127Octets     0
etherStatsPkts128to255Octets    0
etherStatsPkts256to511Octets    0
etherStatsPkts512to1023Octets   0
etherStatsPkts1024to1518Octets  0
```

show rmon interfaces statistics

Syntax

show rmon interfaces IF_PORTS statistics

Parameter

IF_PORTS	specifies ports to show

Default

No default is defined

Mode

Privileged EXEC

Usage

Use the **show rmon interfaces statistics** command to show RMON etherStat statistics of interface.

Example

The example shows how to show RMON etherStat statistics of interface gi1.

```
switch(config)# show rmon interfaces gi1 statistics
==== Port gi1 ==============================
etherStatsDropEvents            0
etherStatsOctets              : 81882
```

```
etherStatsPkts                  578
etherStatsBroadcastPkts          10
etherStatsMulticastPkts          0
etherStatsCRCAlignErrors         0
etherStatsUnderSizePkts          0
etherStatsOverSizePkts           0
etherStatsFragments              0
etherStatsJabbers                0
etherStatsCollisions             0
etherStatsPkts64Octets           355
etherStatsPkts65to127Octets      126
etherStatsPkts128to255Octets     0
etherStatsPkts256to511Octets     42
etherStatsPkts512to1023Octets    55
etherStatsPkts1024to1518Octets   0
```

show rmon event

Syntax

show rmon event (<1-65535> | all)

Parameter

<1-65535>	specifies event index to show
all	Show all existed event

Default

No default is defined

Mode

Privileged EXEC

Usage

Use the **show rmon event** command to show existed RMON event entry.

Example

The example shows how to show rmon event entry.

```
switch(config)# rmon event 1 log trap public description test owner admin
switch(config)# show rmon event 1
Rmon Event Index         1
Rmon Event Type        : Log and Trap
Rmon Event Community : public
Rmon Event Description : test
Rmon Event Last Sent   :
Rmon Event Owner       : admin
```

show rmon event log

Syntax

show rmon event <1-65535> log

Parameter

<1-65535>	specifies event index to show event log

Default

No entry and log is exist

Mode

Privileged EXEC

Usage

Use the **show rmon event log** command to show log triggered by RMON alarm.

Example

The example shows how to show rmon event log.

switch(config)# **show rmon event 1 log**

```
==========================================================
Index       1
Alarm Index   1
Action      : Startup Falling
Time        :  (32918334) 3 days, 19:26:23.34
Description : fa1.Pkts=0 <= 100
```

show rmon alarm

Syntax

show rmon alarm (<1-65535> | all)

Parameter

<1-65535>	specifies alarm index to show
all	Show all existed alarm

Default

No alarm is defined

Mode

Privileged EXEC

Usage

Use the **show rmon alarm** command to show existed RMON alarm entry.

Example

The example shows how to show rmon alarm entry.

Switch(config)# **rmon alarm 1 interface gi1 pkts 300 delta rising 10000 1 falling 100 1 startup rising-falling owner admin**

```
Rmon Alarm Index              1
Rmon Alarm Sample Interval    300
Rmon Alarm Sample Interface : gi1
Rmon Alarm Sample Variable : Pkts
Rmon Alarm Sample Type       : delta
Rmon Alarm Type              : Rising or Falling
Rmon Alarm Rising Threshold  : 10000
Rmon Alarm Rising Event      1
Rmon Alarm Falling Threshold  100
Rmon Alarm Falling Event     1
Rmon Alarm Owner             : admin
```

show rmon history

Syntax

show rmon history (<1-65535> | all)

Parameter

<1-65535>	specifies history index to show
all	Show all existed history

Default

No history is defined

Mode

Privileged EXEC

Usage

Use the **show rmon history** command to show existed RMON history entry.

Example

The example shows how to show RMON history entry.

switch(config)# **rmon history 1 interface gi1 interval 30 owner admin**
switch(config)# **show rmon history 1**

```
Rmon History Index        1
Rmon Collection Interface: gi1
Rmon History Bucket       50
Rmon history Interval     30
Rmon History Owner      : admin
```

show rmon history statistic

Syntax

show rmon history <1-65535> statistic

Parameter

<1-65535>	specifies history index to show history statistic

Default

No history is defined

Mode

Privileged EXEC

Usage

Use the **show rmon history statistic** command to show statistics that are recorded by RMON history.

Example

The example shows how to show RMON history statistics

switch(config)# **show rmon history 1 statistics**

```
==========================================================
Sample Index          2
Interval Start      :  (32940466) 3 days, 19:30:04.66
DropEvents            0
Octets              : 117226
Pkts                763
BroadcastPkts         9
MulticastPkts         0
CRCAlignErrors        0
UnderSizePkts         0
OverSizePkts          0
Fragments             0
Jabbers               0
Collisions            0
Utilization           1

==========================================================
Sample Index          1
Interval Start      :  (32939462) 3 days, 19:29:54.62
DropEvents            0
Octets              220
Pkts                3
BroadcastPkts         1
MulticastPkts         0
CRCAlignErrors        0
UnderSizePkts         0
OverSizePkts          0
Fragments             0
```

Jabbers	0
Collisions	0
Utilization	0

28. SNMP

show snmp

Syntax	**show snmp**
Parameter	N/A
Default	N/A
Mode	Privileged EXEC
Usage	To show the status of Simple Network Management Protocol (SNMP), use the command **show snmp** in the Privileged EXEC mode.
Example	The following example shows the SNMP status.

```
Switch# show snmp
SNMP is disabled.
```

show snmp community

Syntax	**show snmp community**
Parameter	N/A
Default	N/A
Mode	Privileged EXEC
Usage	To show the configuration of snmp communities, use the command **show snmp community** in the Privileged EXEC mode.

Example The following example shows the SNMP communities configuration.

```
Switch# show snmp community
Commnunity Name      Group Name                        View
Access
-------------------- ------------------------------ ----------
-------------------- ------------
private                                             all
ro
public                                              all
rw

  Total Entries: 2
```

show snmp engineid

Syntax **show snmp engineid**

Parameter N/A

Default N/A

Mode Privileged EXEC

Usage To show the SNMPv3 engine IDs defined on the switch, use the command **show snmp engineid** in the Privileged EXEC mode.

Example The following example shows the SNMP engind id information.

```
Switch# show snmp engineid
Local SNMPV3 Engine id: 00036d001122

     IP address                    Remote SNMP engineID
------------------------------ ----------------------------
------------------------------------ 192.168.1.11
                                     00036D10000A

  Total Entries: 1
```

show snmp group

Syntax **show snmp group**

Parameter N/A

Default N/A

Mode Privileged EXEC

Usage To show the SNMP group configuration on the switch, use the command **show snmp group** in the Privileged EXEC mode.

Example The following example shows the SNMP group configuration.

```
Switch# show snmp group
Group Name                      Model   Level         ReadView
WriteView                       Not
------------------------------ ------ ------------ -----------
------------------ ------------------------------ ----
private                         v2c     noauth        all
all                             ---
v3                              v3      auth          all
all                             all

Total Entries: 2
```

show snmp host

Syntax **show snmp host**

Parameter N/A

Default N/A

Mode Privileged EXEC

Usage To show the SNMP trap notification recipients defined on the switch, use the command **show snmp host** in the Privileged EXEC mode.

Example The following example shows the configuration of SNMP notification recipients on the switch.

```
Switch# show snmp host
Server              Community Name    Notification Version     Notification Type
-------------------------------------------------------------------------------
192.168.1.11        private           v1                       trap

Total Entries: 1
```

show snmp trap

Syntax **show snmp trap**

Parameter N/A

Default N/A

Mode Privileged EXEC

Usage To show the status of SNMP traps on the switch, use the command **show snmp trap** in the Privileged EXEC mode.

Example The following example shows the status of SNMP traps.

```
Switch# show snmp trap
SNMP auth failed trap : Enable
SNMP linkUpDown trap : Enable
SNMP cold-start trap : Enable
SNMP warm-start trap : Enable
```

show snmp view

Syntax **show snmp view**

Parameter N/A

Default N/A

Mode Privileged EXEC

Usage To show the SNMP view defined on the switch, use the command **show snmp view** in the Privileged EXEC mode.

Example The following example shows the configuration of SNMP view.

```
Switch# s how snmp view
View Name                      Subtree OID
OID Mask                  View Type
--------------------------     --------------------------------
-------     ----------------------     ---------
```

```
all                                .1
all                            included
private                            .1.3.3.1
all                            included

Total Entries: 2
```

show snmp user

Syntax **show snmp user**

Parameter N/A

Default N/A

Mode Privileged EXEC

Usage To show the SNMP users defined on the switch, use the command **show snmp user** in the Privileged EXEC mode.

Example The following example shows the configuration of SNMP user.

```
Switch# show snmp user
Username:                  v3
Password:                  ********
Privilege Mode:            rw
Access GroupName:          v3
Authentication Protocol: md5
Encryption Protocol:       none
Access SecLevel:           auth

Total Entries: 1
```

snmp

Syntax **snmp**

Parameter N/A

Default SNMP is disabled by default

Mode Global Configuration

Usage	To enable the SNMP on the switch, use the command **snmp** in the Global Configuration mode. Otherwise, use the **no** form of the command to disable to SNMP.
Example	The following example enables the SNMP. `Switch(config)# snmp`

snmp community

Syntax	**snmp community** *community-name* [**view** *view-name*] (**ro**|**rw**) **snmp community** *community-name* **group** *group-name* **no snmp community** *community-name*

Parameter		
	community-name	Community name (maximum length is 20 characters).
	view *view-name*	Community assign the access view.
	ro	Set community access read_only
	rw	set community access read_write
	group *group-name*	Community assign the access group

Default	No SNMP community is configured
Mode	Global Configuration
Usage	To define the SNMP community that permit access for SNMP v1 and v2, use the command **snmp community** in the Global Configuration mode.
Example	The following example defines the SNMP community named *private* with the default view *all*, and the access right is *read-only*. `Switch(config)# snmp community private ro`

snmp engineid

Syntax	**snmp engineid** (**default**|*ENGINEID*)

Parameter		
	default	Set snmp engine id default.
	ENGINEID	Set snmp engineid engine id(10~64 hex, the hex num must be divided b y 2) must be divided by 2.
Default	The default SNMP engine ID on the switch is based on switch MAC address.	

Mode	Global Configuration

Usage	To define the SNMP engine on the switch, use the command s**nmp engineid** in the Global Configuration mode.

Example	The following example configure the switch SNMP engine ID

```
Switch(config)# snmp engineid 00036D001122
```

snmp engineid rmote

Syntax	**snmp engineid remote** (*ip-addr*|*ipv6-addr*) *ENGINEID* **no snmp engineid remote** (*ip-addr*|*ipv6-addr*)

Parameter	*ENGINEID*	Specify SNMP engine ID. The engine ID is a 10 to 64 hexadecimal characters, and the hexadecimal number must be divided by 2.
	ip-addr	IP Address format is A.B.C.D where (A/B/C/D = 0 ~ 255)
	ipv6-addr	IPv6 Address format is X:X::X:X

Default	N/A

Mode	Global Configuration

Usage	To define the remote host for SNMP engine, use the command s**nmp engineid remote** in the Global Configuration mode; and use the **no** form of the command to delete the remote host from the SNMP engine.

Example	The following example adds the remote *192.168.1.11* into SNMP engine

```
Switch(config)# snmp engineid remote 192.168.1.11 00036D10000A
```

snmp group

Syntax	**snmp group** *group-name* (**1**|**2c**|**3**) (**noauth**|**auth**|**priv**) **read-view** *read-view* **write-view** *write-view* [**notify-view** *notify-view*] **no snmp group** *group-name* security-mode version (**1**|**2c**|**3**)

Parameter	*group-name*	Specify SNMP group name, and the maximum length is 30 characters.
	(**1**|**2c**|**3**)	Specify the SNMP version.
	noauth	Specify that no packet authentication is performed.
	auth	security level auth .
	priv	security level priv
	read-view *read- view*	Read view name
	write-view *write- view*	Write view name.
	notify-view *notify- view*	Notify view name.

Default No group entry is existed.

Mode Global Configuration

Usage To define the SNMP group, use the command **snmp group** in the Glocal Configuration mode, and use the **no** form of the command to delete the configuration.

SNMP group configuration is used in the command **snmp use** to map SNMP users to the SNMP group. These users would be automatically maped to the SNMP views defined in this command.

The securety level for SNMP v1 or v2 is always **noauth**.

Example The following example adds SNMPv3 group

```
Switch(config)# snmp group v3 version 3 auth read-view all
write-view all notify-view all
```

snmp host

Syntax

snmp host (*ip-addr*|*ipv6-addr*|*hostmane*) [**traps**|**informs**] [**version** (**1**|**2c**)] *community-name* [**udp-port** *udp-port*] [**timeout** *timeout*] [**retries** *retries*]
snmp host (*ip-addr*|*ipv6-addr*|*hostmane*) [**traps**|**informs**] **version 3** [(**auth**|**noauth**|**priv**)] *community-name* [**udp-port** *udp-port*] [**timeout** *timeout*] [**retries** *retries*]
no snmp host (*ip-addr*|*ipv6-addr*|*hostmane*) **[traps**|**informs] [version (1**|**2c**|**3)]**

Parameter	*ip-addr*	The IP adderss of recipet.
	ipv6-addr	IPv6 Address format is X:X::X:X.
	hostname	Host name.
	traps	Notification type is Traps.
	informs	Notification type is informs.
	version (**1**|**2c**|**3**)	Version of trap or inform.
	noauth	Specify that no packet authentication is performed. It is

	applicable only to the SNMPv3 security mode.
auth	Specify that no packet authentication without entryption is performed. It is applicable only to the SNMPv3 security mode.
priv	Specify that no packet authentication with entryption is performed. It is applicable only to the SNMPv3 security mode.
community-name	The SNMP community sent with the notification.
udp-port *udp-port*	Udp port number.
timeout *timeout*	V2c inform timeout
retries *retries*	V2c inform retries.

Default

No SNMP host is configured.
The default SNMP version for the command is SNMPv1.

Mode

Global Configuration

Usage

To configure the hosts to receive SNMP notificatons, use the command **snmp host** in the Global Configuration mode; and use the **no** form of the command to delete the configuration.

Example

The following example adds the recipet *192.168.1.11* for the SNMP traps notification.

```
Switch(config)# snmp host 192.168.1.11 private
```

snmp trap

Syntax

snmp trap (**auth**|**cold-start**|**linkUpDown**|**port-security**|**warm-start**)
no snmp trap (**auth**|**cold-start**|**linkUpDown**|**port-security**|**warm-start**)

auth	Set snmp authentication failure trap.
cold-start	Set snmp bootup cold start-up trap.
linkUpDown	Set snmp link up and down trap.
port-security	Enable the SNMP port security trap.
warm-start	Set snmp bootup warm start-up trap.

Default

All the SNMP traps are enabled.

Mode

Global Configuration

Usage

To send the SNMP traps, use the command snmp trap in the Global Configuration mode; and use the no form of the command to disable the SNMP traps.

Example The following example disables and enables the SNMP link up and down traps individually.

```
Switch(config)# no snmp trap linkUpDown
Switch(config)# snmp trap linkUpDown
```

snmp user

Syntax

snmp user *username group-name* [**auth** (**md5**|**sha**) *AUTHPASSWD*]
snmp user *username group-name* **auth** (**md5**|**sha**) *AUTHPASSWD* **priv** *PRIVPASSWD*
no snmp user *username*

Parameter

username	Specify the SNMP user name on the host that connects to the SNMP agent. The max character is 30 characters. For the SNMP v1 or v2c, the user name must match the community name by the command **snmp host**.
group-name	Specify the SNMP group to which the SNMP user belongs. The SNMP group should be SNMPv3 and configured by the command **snmp group**.
auth (**md5**|)	Use md5 protocol.
auth (**sha**|)	Use sha protocol.
AUTHPASSWD	The password for authentication and the range of length is from 8 to 32 characters.
Priv *PRIVPASSWD*	Use encryption protocol

Default N/A

Mode Global Configuration

Usage To define a SNMP user, use the command snmp user in the Global Configuration mode; and use the no form to delete the SNMP user.

Example The following example adds SNMP user *v3* into the group *v3* by the MD5 authentication.

```
Switch(config)# snmp user v3 v3 auth md5 12345678
```

snmp view

Syntax

snmp view *view-name* **subtree** *oid-tree* **oid-mask** (**all**|*oid-mask*) **viewtype** (**included**|**excluded**)
no snmp view *view-name* **subtree** (**all**|*oid-tree*)

Parameter	*view-name*	The SNMP view name. Its maximum length is 30 characters.
	subtree *oid-tree*	View subtree.
	oid-mask (**all**|*oid- mask*)	
	Iewtype (included|excluded)	**Subtree oid mask.** Include or exclude the selected MIBs in the view
Default	N/A	
Mode	Global Configuration	
Usage	To configure the SNMP view, use the command **snmp view** in the Global Configuration mode; and use the **no** form of the command to delete the SNMP view. The default SNMP view cannot be deleted and modified by users. By default, the maximum numbers of SNMP view is limited to 16.	
Example	The following example defines the SNMP view. `Switch(config)# snmp view private subtree 1.3.3.1 oid-mask all viewtype included`	

29. Spanning Tree

instance (MST)

Syntax	**instance** *instance-id* **vlan** *vlan-list* **no instance** *instance-id* **vlan** *vlan-list*	
Parameter	*instance-id*	Instance ID (0~15)
	vlan *vlan-list*	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
Default	All VLANs are mapped to the Common and Internal Spanning Tree (CIST) instance (instance 0).	
Mode	MST Configuration	
Usage	To map the VLAN to the Multiple Spanning Tree (MSTP) instances, use the command instance in the MST Configuration mode; and use the no form of the command to restore its default configuration. All VLANs that are not explicility configured to an MSTP instance are mapped to the CIST instance (instance 0).	

For two or more switches in the samp MSTP regiom, their VLAN mapping, name and revision number configuration, must be the same.

Example

The following example maps the vlan 10-20 to the MSTP instance 1, and VLAN 100 to instance 2.

```
Switch(config)# spanning-tree mst configuration
Switch(config-mst)# instance 1 vlan 10-20
Switch(config-mst)# instance 2 vlan 100
```

revision (MST)

Syntax

revision *rev*
no revision

Parameter

rev	The MSTP revision number. Its valid rage is from 0 to 65535.

Default

The default revision number is 0.

Mode

MST Configuration

Usage

To define the revision for the MSTP configuration, use the command **revision** in the MST Configuration mode; and use the **no** form of the command to restore it default configuration.

Example

The following example defines the revision MSTP configuration to 1.

```
Switch(config)# spanning-tree mst configuration
Switch(config-mst)# revision 1
```

show spanning-tree

Syntax

show spanning-tree

Parameter

N/A

Default

N/A

Mode

Privileged EXEC

Usage	To display the spanning tree configuration, use the command spanning-tree in the Privileged EXEC mode

Example The following example shows the spanning tree configuration.

```
Switch# show spanning-tree

Spanning tree enabled mode RSTP
Default port cost method:  short

  Root ID    Priority    32768
             Address     00:11:22:33:44:55
             This switch is the root
             Hello Time  4 sec  Max Age 10 sec  Forward Delay
25 sec

  Number of topology changes 2 last change occurred 20:34:30
ago
  Times:  hold 0, topology change 0, notification 0
          hello 4, max age 10, forward delay 25

```

show spanning-tree interface

Syntax	**show spanning-tree interface** *IF_PORTS* [**statistic**]
Parameter	**interface** *IF_PORTS* — **An interface ID or the list of interface IDs.** **statistic** — Display the STP statistic for an interface.
Default	N/A
Mode	Privileged EXEC
Usage	To show the STP configuration and statistics for an interface, use the command show spanning-tree interface in the Privileged EXEC mode.

Example The following example shows the STP configuration for the interface fa23.

```
Switch# show spanning-tree interfaces GigabitEthernet 23

Port fa23 enabled
```

```
State: forwarding                                  Role:
designated
Port id: 128.23                                    Port cost: 19
Type: P2P (RSTP)                                   Edge Port: No
Designated bridge Priority : 32768                 Address:
00:11:22:33:44:55
Designated port id: 128.23                         Designated path
cost: 0
BPDU Filter: Disabled                              BPDU guard:
Disabled
BPDU: sent 21886, received 0
```

The following example shows the STP statistic for the interface fa23.

```
Switch# show spanning-tree interfaces fa23 statistic

 STP Port Statistic
=================================================

Port                              : gi23
Configuration BDPUs Received      : 0
TCN BDPUs Received                : 0
MSTP BDPUs Received               : 0
Configuration BDPUs Transmitted   : 0
TCN BDPUs Transmitted             : 0
MSTP BDPUs Transmitted            : 21917
=================================================
```

show spanning-tree mst

Syntax

show spanning-tree mst *instace-id*

Parameter

instance-id	The MSTP instance ID. Its valid range is from 0 to 15.

Default

N/A

Mode

Privileged EXEC

Usage

To show the information for a specific MSTP instance, use the command **show spanning-tree mst** in the Privileged EXEC mode.

Example

The following example displays the information for the MSTP instance 0 and 1 individually.

```
Switch# show spanning-tree mst 0

 MST Instance Information
============================================================
            Instance Type : CIST (0)
        Bridge Identifier : 32768/ 0/00:11:22:33:44:55

show spanning-tree mst configuration

Syntax	**show spanning-tree mst configuration**
Parameter	N/A
Default	N/A
Mode	Privileged EXEC

Usage To show the global MST configuration, use the command **show spanning- tree mst configuration** in the Privileged EXEC mode.

Example The following example shows the global MST configuration.

```
Switch# show spanning-tree mst
configuration Name
          [00:11:22:33:44:55]
Revision   0     Instances configured 2

Instance   Vlans mapped

1          100-110
-------------------------------------------------------------------------
----
```

show spanning-tree mst interface

Syntax **show spanning-tree mst** *instance-id* **interface** *IF_PORTS*

Parameter

instance-id	Instance ID (0~15)
interface *IF_PORTS*	An interface ID or the list of interface IDs.

Default N/A

Mode Privileged EXEC

Usage To show the MSTP instance information on the specific interface, use the command **show spanning-tree mst interface** in the Privileged EXEC mode.

Example The following example shows the MSTP 0 and 1 information individually on the interface fa23.

```
Switch# show spanning-tree mst 0 interfaces

 fa23 MST Port Information
==========================================================

              Port Role : Designated
             Port State : Forwarding
------------------------------------------------------------
```

spanning-tree

Syntax

spanning-tree
no spanning-tree

Parameter

N/A

Default

Spanning-Tree is disabled by default.

Mode

Global Configuration

Usage

To enable the spanning tree, use the command spanning-tree in the Global Configuration mode; and use the no form of the command to disable the spanning tree on the switch.

Example

The following example disables and enables the spanning tree individually.

```
Switch(config)# no spanning-tree
Switch(config)# spanning-tree
```

spanning-tree bpdu

Syntax	**spanning-tree bpdu (filtering|flooding)** **no spanning-tree bpdu**
Parameter	**filtering** bpdu packets are filtered when stp is disabled on ports **flooding** bpdu packets are flooded to all ports with stp disabled and flooding mode
Default	The default configuration is flooding.
Mode	Global Configuration
Usage	To configure the action of Bridge Protocol Data Unit (BPDU) handling when STP is disabled, use the command **spanning-tree bpdu** in the Global Configuration mode. To restore the configuration to the default action, use the **no** form of the command.
Example	The following example configures the action of BPDU handling to fliter when the STP is disabled. `Switch(config)# spanning-tree bpdu filtering`

spanning-tree bpdu-filter

Syntax	**spanning-tree bpdu-filter** **no spanning-tree bpdu-filter**
Parameter	N/A
Default	BPDU filter is disabled.
Mode	Interface Configuration
Usage	To enable the BPDU filter, use the command **spanning-tree bpdu-filter** in the Interface Configuration mode; and use **no** form of the command to disable the BPDU filter.

Example	The following example enables the BPDU filter for interface fa1.
	`Switch(config)# interface GigabitEthernet 1`
	`Switch(config-if)# spanning-tree bpdu-filter`

spanning-tree bpdu-guard

Syntax

spanning-tree bpdu-guard
no spanning-tree bpdu-guard

Parameter

N/A

Default

BPDU guard is disabled

Mode

Interface Configuration

Usage

To enable the BPDU filter, use the command **spanning-tree bpdu-guard** in the Interface Configuration mode; and use **no** form of the command to disable the BPDU filter.

Example

The following example enables the BPDU guard for interface gi1.

```
Switch(config)# interface gi1
Switch(config-if)# spanning-tree bpdu-guard
```

spanning-tree cost

Syntax

spanning-tree cost *cost*
no spanning-tree cost

Parameter

cost	The value of external path cost (0 = Auto)

Default

The default port path cost is 0, and it is determined by the port speed and the path cost method (long or short).

Interface	Long	Short
Gigabit Ethernet (1000Mbps)	20000	4
Fast Ethernet (100Mbps)	200000	19
Ethernet (10Mbps)	2000000	100

Mode

Interface Configuration

Usage

To configure the STP path cost for an interface, use the command **spanning-tree cost** in the Interface Configuration mode; and use the **no** form of the command to restore it to the default configuration.

Example

The following example configures port path cost to 30000 for interface fa2.

```
Switch(config)# interface gi1
Switch(config-if)# spanning-tree cost 30000
```

spanning-tree forward-time

Syntax

spanning-tree forward-delay *seconds*
no spanning-tree forward-delay

Parameter

seconds	Forward-delay interval

Default

The default forward delay time is 15 seconds.

Mode

Global Configuration

Usage

To configure the STP bridge forward delay time, which is the amount of time that a port remains in the Listening and Learning states before it enters the Forwarding state, use the command spanning-tree forward-time in the Global Configuration mode. To restore it to the default configuration, use the **no** form of the command.

When the forward delay time is configured, the following relationship shold be maintained:

2 * (forward-time - 1) >= Max-Age

Example

The following example configures STP forward delay time to 25.

```
Switch(config)# spanning-tree forward-time 25
```

spanning-tree hello-time

Syntax

spanning-tree hello-time *seconds*
no spanning-tree hello-time

Parameter

seconds	specifies hello time of Spanning-tree

Default

The default STP hello time is 2 seconds.

Mode

Global Configuration

Usage

STP hello time is the time interval to broadcast its hello message to other bridges. To configure the STP hello time, use the command **spanning-tree hello-time** in the Global Configuration mode; and use the **no** form of the

command to restore the hello time to default configuration.

When the hello time is configured, the following relationship should be maintained:

Max-Age >= 2 * (hello-time + 1)

Example The following example configures BPDU hello time to 4.

```
Switch(config)# spanning-tree hello-time 4
```

spanning-tree edge

Syntax
spanning-tree edge
no spanning-tree edge

Parameter N/A

Default The default configuration is disabled.

Mode Interface Configuration

Usage To enable the edge mode for an interface, use the command **spanning-tree edge** in the Interface Configuration mode; and use the **no** form of the command to restore it to the default configuration.

In the edge mode, the interface would be put into the Forwarding state immediately upon link up. If the edge mode is enabled for the interface and there are BPDUs received on the interface, the loop might be occurred in the short time.

Example The following example enables the edge mode for the interface fa1.

```
Switch(config)# interface GigabitEthernet 1
Switch(config-if)# spanning-tree edge
```

spanning-tree link-type

Syntax
spanning-tree link-type (point-to-point|shared)
no spanning-tree link-type

Parameter

point-to-point	Consider the interface as point-to-point
shared	Consider the interface as shared

Default	The default configuration link type is **point-to-poin**t for the ports with full duplex configuration, and **shared** for the ports with half duplex settings.
Mode	Interface Configuration
Usage	To set the RSTP link-type for an interface, use the command **spanning-tree link** in the Interface Configuration mode. For the default configuration, use the **no** form of the command.
Example	The following example configures the link-type to point-to-point for the interface fa1.

```
Switch(config)# interface fa1
Switch(config-if)# spanning-tree link-type point-to-point
```

spanning-tree max-hops

Syntax	**spanning-tree max-hops** *counts* **no spanning-tree max-hops**

Parameter	*counts*	Specify the number of hops in an MSTP regision before the BPDU is discarded. The valid range is 1 to 40.

Default	The default max-hops configuration is 20.
Mode	Global Configuration
Usage	To specify the number of hops for a BPDU to be forwarded in the MSTP region, use the command **spanning-tree max-hops** in the Global Configuration mode; and restore the setting to default configuration by the **no** form of the command.
Example	The following example specifies the max hops for BPDU to 10.

```
Switch(config)# spanning-tree max-hops 10
```

spanning-tree maximum-age

Syntax	**spanning-tree maximum-age** *seconds* **no spanning-tree maximum-age**

Parameter	*seconds*	Interval the switch waits between receiving BPDUs from the root switch

Default The default maximum age is 20 seconds.

Mode Global Configuration

Usage To set the interval in seconds that the switch can wait without receiving the configuration messages, before attempting to redefine its own configuration, use the command **spanning-tree maximum-age** in the Global Configuratio mode. For the default configuration, use the **no** form of the commands.

When the maximum age is configured, the following relationship should be maintained:

2 * (forward-time - 1)>= Max-Age >= 2 * (hello-time + 1)

Example The following example configures STP maximum age to 10.

```
Switch(config)# spanning-tree maximum-age 10
```

spanning-tree mcheck

Syntax **spanning-tree mechek**

Parameter N/A

Default N/A

Mode Interface Configuration

Usage To restart the Spanning Tree Protocol (STP) migration process (re-negotiate forcely with its neighborhood) on the specific interface, use the command spanning-tree mcheck in the Interface Configuration mode

Example The following example restarts the STP negotiation on the interface fa1.

```
Switch(config)# interface fa1
Switch(config-if)# spanning-tree mecheck
```

spanning-tree mode

Syntax **spanning-tree mode (mstp|rstp|stp)**
no spanning-tree force-version

Parameter	**mstp**	Configure IEEE 802.1S Multiple Spanning Tree
	rstp	Configure IEEE 802.1W Rapid Spanning Tree Protocol
	stp	Configure IEEE 802.1D Spanning Tree Protocol

Default The default mode is rstp.

Mode Global Configuration

Usage To specify the spanning tree operation mode, use the command of **spanning-tree mode** in the Global Configuration mode. For the default configuration, use the command **no spanning-tree force-version** in the Global Configuration mode.

When the switch is configured as MSTP mode, it can use STP and RSTP for the backward compatibility with switches working in STP and RSTP mode individually. For the RSTP configuration, the switch can also use STP for the switches working in the STP operation.

Example The following example sets the STP operation to MSTP.

```
Switch(config)# spanning-tree mode mstp
```

spanning-tree mst configuration

Syntax **spanning-tree mst configuration**

Parameter N/A

Default N/A

Mode Global Configuration

Usage To enter the MST configuration mode for the MSTP configuration modification, use the command **spanning-tree mst configuration** in the Global Configuration mode.

Example The following example modifies the MSTP configuration in the MST Configuration mode.

```
Switch(config)# spanning-tree mst configuration
Switch(config-mst)# instance 1 vlan 10-20
Switch(config-mst)# name Valkyrie
Switch(config-mst)# revision 1
```

spanning-tree mst cost

Syntax

spanning-tree mst *instance-id* **cost** *cost*
no spanning-tree mst *instance-id* **cost** *cost*

Parameter

instance-id	Instance ID (0~15)
cost	The value of internal path cost (0 = Auto)

Default

The default port path cost is 0, and it is determined by the port speed and the path cost method (long or short).

Interface	Long	Short
Gigabit Ethernet (1000Mbps)	20000	4
Fast Ethernet (100Mbps)	200000	19
Ethernet (10Mbps)	2000000	100

Mode

Interface Configuration

Usage

To configure the path cost for MSTP calculations, use the command **spanning-tree mst cost** in the Interface Configuration mode. If the loop occurs, the MSTP considers the path cost when selecting the interface into the Forwarding state. For the default configuration, use the no form of the command.
When configuring the path cost on the CIST (instance 0), it is equal to the command **spanning-tree cost** in the Interface Configuration mode.

Example

The following example configures the path cost of interface fa1 on the instance 1 to 30000

```
Switch(config)# interface gi1
Switch(config-if)# spanning-tree mst 1 cost 30000
```

spanning-tree mst port-priority

Syntax

spanning-tree mst *instance-id* **port-priority** *priority*
no spanning-tree mst *instance-id* **port-priority**

Parameter

instance-id	Instance ID (0~15)
priority	Priority (0~240)

Default

The default port priority on each instance is 128

Mode

Interface Configuration

Usage

To configure the interface priority on the specific instances, use the command **spanning-tree mst port-priority** in the Interface Configuration mode. For the default configuration, use the **no** form of the command.

The priority value must be the multiple of 16. When the port priority on the CIST (instance 0) is configured, it is equal to the command **spanning-tree port-priority** in the Interface Configuration mode.

Example

The following example sets the port priority of gi1 on the instance 1 to 144; and set the port priority of gi1 on the CIST (instance 0) to 96

```
Switch(config)# interface gi1
Switch(config-if)# spanning-tree mst 1 port-priority 144
Switch(config-if)# spanning-tree mst 0 port-priority 96
```

spanning-tree mst priority

Syntax

spanning-tree mst instance *instance-id* **priority** *priority*
no spanning-tree mst instance *instance-id* **priority**

Parameter

instance-id	Instance ID (0~15)
priority	Priority (0~61440)

Default

The default priority on each instance is 32768.

Mode

Global Configuration

Usage

To configure the bridge priority on the specific instance, use the command **spanning-tree mst priority** in the Global Configuration mode. To restore the default configuration, use the **no** form of the command.

The value of bridge priority must be the multiple of 4096. A switch with the lowest priority is the root of the STP topology. For the configuration of bridge priority on the CIST (instance 0), it is equal to the command **spanning-tree priority** in the Global Configuration mode.

Example

The following example modifies the bridge priority to 4096 on instance 0 and instance 1 individually.

```
Switch(config)# spanning-tree mst 0 priority 4096
Switch(config)# spanning-tree mst 1 priority 4096
```

spanning-tree pathcost method

Syntax

spanning-tree pathcost method (long|short)

Parameter

long	The range for the path cost is from 1 to 200000000.
short	The range for the path cost is from 1 to 65535.

Default

The default path cost method is long.

Mode

Global Configuration

Usage

To set the spanning tree path cost method, use the command **spanning-tree pathcost method** in the Global Configuration mode.

If the short method is specified, the switch calculates the path cost in the range 1 throuth 65535; Otherwise, it calculates the path cost in the range 1 to 200000000.

Example

The following example modifies path cost method to short.

```
Switch(config)# spanning-tree pathcost method short
```

spanning-tree pathcost method

Syntax

spanning-tree pathcost method (long|short)

Parameter

long	Specifies that the default port path costs are within the range: 1-200,000,000.
short	Specifies that the default port path costs are within the range: 1-65,535.

Default

The default path cost method is long.

Mode

Global Configuration

Usage

To set the spanning tree path cost method, use the command **spanning-tree pathcost method** in the Global Configuration mode.

If the short method is specified, the switch calculates the path cost in the range 1 throuth 65535; Otherwise, it calculates the path cost in the range 1 to 200000000.

Example The following example modifies path cost method to short.

```
Switch(config)# spanning-tree pathcost method short
```

spanning-tree port-priority

Syntax

spanning-tree port-priority *priority*
no spanning-tree port-priority *priority*

Parameter

priority	Priority (0~240)

Default

The default priority for each interface is 128.

Mode

Interface Configuration

Usage

To configure the STP priority for an interface, use the command **spanning-tree port-priority** in the Interface Configuration mode. For the default configuration, use the **no** form of the command.

The priority value must be the multiple of 16.

Example

The following example modifies the port priority to 96 for the interface gi2 .

```
Switch(config)# interface gi2
Switch(config-if)# spanning-tree port-priority 96
```

spanning-tree priority

Syntax

spanning-tree priority *priority*
no spanning-tree priority

Parameter

priority	Priority (0~61440)

Default

The default priority for the switch 32768.

Mode

Global Configuration

Usage

To configure the bridge priority, use the command **spanning-tree mst priority** in the Global Configuration mode. To restore the default configuration, use the **no** form of the command.

The value of bridge priority must be the multiple of 4096. A switch with the lowest priority is the root of the STP topology. When swithes with the same priority configuration in the environment, the switch with lowest MAC address would be selected as the root bridge.

Example The following example modifies the bridge priority to 4096.

```
Switch(config)# spanning-tree priority 4096
```

spanning-tree tx-hold-count

Syntax

spanning-tree tx-hold-count *count*
no spanning-tree tx-hold-count

Parameter

count	Specifies the tx hold count

Default

The default value is 6.

Mode

Global Configuration

Usage

To limit the maximum numbers of packets transmission per second, use the command **spanning-tree tx-hold-count** in the Global Configuration mode. For the default configuration, use the **no** form of the command.

Example

The following example sets the tx-hold-count to 4.

```
Switch(config)# spanning-tree tx-hold-count 4
```

30. Storm Control

show storm-control

Syntax

show storm-control
show storm-control interface *IF_PORTS*

Parameter

IF_PORTS	Specify port to show.

Default

No default value for this command

Mode Privileged EXEC

Usage Use "**show storm-control**" command to show all storm control related configurations including global configuration and per port configurations.

Use "**show storm-control interface**" command to show selected port storm control configurations.

Example This example shows how to show storm control global configuration.

```
Switch# show storm-control
  Storm control preamble and IFG: Excluded
  Storm control unit: bps
  ........................................
```

This example shows how to show current storm control configuration on interface gi1

```
Switch# show storm-control interfaces GigabitEthernet 1
  Port    | State |  Broadcast  |  Unkown-Multicast  | Unknown-Unicast |
Action
          |       |      kbps   |           kbps     |      kbps
|
---------+-------+-----------+-------------------+-----------------|--------
---
  gi1       disable    Off(  10000)       Off(  10000)         Off(  10000)
Drop
```

storm-control

Syntax

storm-control
no storm-control

storm-control (broadcast | unknown-unicast | unknown-multicast)
no storm-control (broadcast | unknown-unicast | unknown-multicast)

Parameter

broadcast	Broadcast storm control
unknown-unicast	Unknown-unicast storm control
unknown-multicast	Unknown-multicast storm control

Default

Default storm control is disabled.
Default broadcast storm control is disabled.

Default unknown multicast storm control is disabled
Default unknown unicast storm control is disabled

Mode Interface Configuration

Usage Storm control function is able to enable/disable on each single port. Use the "**storm control**" command to enable storm control feature on the selected ports. And use "**no storm control**" command to disable storm control feature. Not only port is able to enable/disable on the port. Each storm control type is also able to enable/disable on each single port.

Use the "**storm-control (broadcast|unknown-unicast|unknown-multicast)**" command to enable the storm control type you need and use no form to disable it.

Example

This example shows how to enable storm control on interface gi1.

```
Switch(config)# interface gi1
Switch(config-if)# storm-control
```

This example shows how to enable broadcast storm control and configure broadcast storm control rate to 200.

```
Switch(config)# interface gi1
Switch(config-if)# storm-control broadcast
```

This example shows how to show current storm control configuration on interface gi1

```
Switch# show storm-control interfaces gi1
  Port    | State |  Broadcast  |  Unkown-Multicast  | Unknown-Unicast |
Action
          |       |     pps     |          pps       |      pps
|
---------+-------+------------+--------------------+-----------------|--------
---
  gi1       enable        200            Off(  10000)         Off(  10000)
Shutdown
```

storm-control action

Syntax

storm-control action (drop | shutdown)
no storm-control action

Parameter

drop	Drop packets after exceed storm control threshold
shutdown	Shut down port after exceed storm control threshold

Default

Default storm control action is drop.

Mode

Interface Configuration

Usage

Use "**storm-control action"** command to set the action when the received storm control packets exceed the maximum rate on an interface.

Use **no** form to restore to default action.

Example

This example shows how to configure storm control action to shutdown port on interface gi1.

```
Switch(config)# interface gi1
Switch(config-if)# storm-control action shutdown
```

This example shows how to show storm control action on interface gi1.

```
Switch# show storm-control interfaces gi1
  Port    | State |  Broadcast  |  Unkown-Multicast  | Unknown-Unicast |
Action
          |       |     pps     |          pps       |      pps
|
---------+-------+------------+--------------------+-----------------|--------
---
  gi1      disable  Off(  10000)       Off(  10000)         Off(  10000)
Shutdown
```

storm-control ifg

Syntax

storm-control ifg (include | exclude)

Parameter

include	Include preamble and IFG
exclude	Exclude preamble and IFG

Default

Default storm control inter frame gap is excluded.

Mode

Global Configuration

Usage

Storm control mechanism will try to calculate ingress packets is exceed configured rate or not and do corresponding action.
Use **storm-control ifg** command to include/exclude the preamble and inter frame gap into the calculating.

Example

This example shows how to configure storm inter frame gap to include.

```
Switch(config)# storm-control ifg include
```

This example shows how to show storm control global configuration.

```
Switch# show storm-control
  Storm control preamble and IFG: Included
  Storm control unit: pps
  ........................................
```

storm-control level

Syntax

storm-control (broadcast | unknown-unicast | unknown-multicast) level *<1-1000000>*
no storm-control (broadcast | unknown-unicast | unknown-multicast) level

Parameter

broadcast	Select broadcast storm control type
unknown-unicast	Select unknown unicast storm control type
unknown-multicast	Select unknown multicast storm control type

	<1-1000000> Rate value(bps:16-1000000,pps:1-262143)
Default	Default broadcast storm control rate is 10000. Default unknown multicast storm control rate is 10000. Default unknown unicast storm control rate is 10000.
Mode	Interface Configuration
Usage	Each control type is allowed to have different storm control rate. Use "**storm-control (broadcast|unknown-unicast|unknown-multicast) level**" command to configure it Use no form to restore to default rate.

Example	This example shows how to enable broadcast storm control and configure broadcast storm control rate to 200.
	`Switch(config)# interface gi1`
	`Switch(config-if)# storm-control broadcast`
	`Switch(config-if)# storm-control broadcast level 200`
	
	This example shows how to show current storm control configuration on interface gi1
	`Switch# show storm-control interfaces GigabitEthernet 1`
	`Port | State | Broadcast | Unkown-Multicast | Unknown-Unicast | Action`
	`| pps | pps | pps |`
	`---------+-------+------------+--------------------+-----------------|--------`
	`gi1 enable 200 Off( 10000) Off( 10000) Shutdown`

storm-control unit

Syntax	**storm-control unit (bps | pps)**
Parameter	**bps** Bits per second **pps** Packets per second
Default	Default storm control unit is bps.
Mode	Global Configuration
Usage	Storm control mechanism will try to calculate ingress packets is exceed configured rate or not and do corresponding action. Use **storm-control unit** command to change the unit of calculating method.

Example

This example shows how to configure storm control rate unit as pps.

```
Switch(config)# storm-control unit pps
```

This example shows how to show storm control global configuration.

```
Switch# show storm-control
  Storm control preamble and IFG: Excluded
  Storm control unit: pps
  ........................................
```

31. System File

boot system

Syntax

boot system (image0 | image1)

Parameter

image0	Runtime image 0
image1	Runtime image 1

Default

Default boot image is image0.

Mode

Global Configuration

Usage

Dual image allow user to have a backup image in the flash partition. Use "**boot system**" command to select the active firmware image. And another firmware image will become a backup one.

Example

This example shows how to select image1 as active image.

```
Switch(config)# boot system image1
Select "image1" Success
```

This example shows how to show active image partition.

```
Switch# show flash
         File Name             File Size        Modified
----------------------- ---------------- ------------------------
 startup-config              1191              2000-01-01 00:00:23
 backup-config               1607              2000-01-01 08:36:23
 rsa1                          974               2000-01-01 00:00:18
 rsa2                          1675              2000-01-01 00:00:18
 dsa2                          668               2000-01-01 00:00:18
 ssl cert                     993               2000-01-01 00:00:18
 image0 (backup)             4372401           2012-09-24 01:57:29
 image1 (active)             5555970           2012-06-12 12:17:46
```

copy

Syntax

copy (flash:// | tftp://) (flash:// | tftp://)
copy tftp:// (backup-config | running-config | startup-config)
copy (backup-config | running-config | startup-config) tftp://

copy (backup-config | startup-config) running-config
copy (backup-config | running-config) startup-config

copy (running-config | startup-config) backup-config

Parameter	**flash://**	Specify the file stored in flash to operation. Available files are: flash://startup-config flash://backup-config flash://rsa1 flash://rsa2 flash://dsa2 flash://image0 flash://image1 flash://ram.log flash://flash.log
	tftp://	Specify remote tftp server and remote file name. The format is "**tftp://192.168.1.111/remote_file_name**"
	running-config	Running configuration
	startup-config	Startup configuration
	backup-config	Backup configuration

Default No default value for this command.

Mode Privileged EXEC

Usage There are many types of files in system. These files are very important for administrator to manage the switch. The most common file operation is copy. By using these copy commands, we can upgrade, backup following type of files.

- **Firmware Image**
- **Configuration Files**
- **Syslog Files**
- **Language Files**
- **Security Certificate**

Example This example shows how to copy running configuration to startup configuration.

```
Switch# copy running-config startupst-config
```

This example shows how to backup running configuration to remote tftp server 192.168.111 with file name test1.cfg.

```
Switch# copy running-config tftp://192.168.1.111/test1.cfg
Uploading file.Please Wait...
Uploading Done
Success
```

This example shows how to upgrade startup configuration from remote tftp server 192.168.1.111 with file name test2.cfg.

```
Switch# copy tftp://192.168.1.111/test2.cfg startup-config
Downloading file.Please Wait...
Downloading Done
```

```
Upgrade config success. Do you want to reboot now? (y/n)n
```

This example shows how to backup security file dsa2 to remote tftp server 192.168.1.111 with file name dsa2.

```
Switch# copy flash://dsa2 tftp://192.168.1.111/dsa2
Uploading file.Please Wait...
Uploading Done
```

delete

Syntax

delete (**startrup-config** | **backup-config** | **flash://**)

delete system (**image0** | **image1**)

Parameter

flash://	Specify the configuration file stored in flash to delete. Available files are: flash://startup-config flash://backup-config
startup-config	Delete startup configuration file
backup-config	Delete backup configuration file
image0	Delete flash image0.
image1	Delete flash image1.

Default

No default value for this command.

Mode

Privileged EXEC

Usage

Use "**delete**" command to delete configuration files or use "**delete system**" command to delete firmware image stored in flash.
The "**delete startup-config**" command is using to restore factory default and it is equal to command "**restore-defaults**".

Example

This example shows how to delete backup configuration file.

```
Switch# delete backup-config
```

This example shows how to delete backup firmware image from flash.

```
Switch# delete system image1
```

This example shows how to show file status in flash.

```
Switch# show flash
        File Name             File Size        Modified
----------------------- ---------------- ------------------------
 startup-config              1191              2000-01-01 00:00:23
 backup-config               1607              2000-01-01 08:36:23
 rsa1                          974               2000-01-01 00:00:18
 rsa2                          1675              2000-01-01 00:00:18
```

```
dsa2                          668              2000-01-01 00:00:18
ssl_cert                      993              2000-01-01 00:00:18
image0 (active)               4372401          2012-09-24 01:57:29
image1 (backup)               0
```

restore-defaults

Syntax **restore-defaults** [**interfaces** *IF_PORTS*]

Parameter

interfaces *IF_PORTS*	Specify port to restore its' ruuning config

Default No default value for this command.

Mode Privileged EXEC

Usage Use "**restore-defaults**" command to restore factory default of all system. The command is equal to "**delete startup-config**",

Example This example shows how to restore factory defaults.

```
Switch# restore-defaults
Restore Default Success. Do you want to reboot now? (y/n)n
```

save

Syntax **save**

Parameter

Default No default value for this command.

Mode Privileged EXEC

Usage Use "**save**" command to save running configuration to startup configuration file. This command is equal to "**copy running-config startup-config**".

Example This example shows how to save running configuration to startup configuration.

```
Switch# save
Success
```

This example shows how to show startup configuration

```
Switch# show startup-config
! System Description: RTK RTL8328-24FE-4GE Switch
! System Version: v2.5.0-beta.32811

```

show bootvar

Syntax **show bootvar**

Parameter

Default No default value for this command.

Mode Privileged EXEC

Usage Use "**show bootvar**" command to show image information in both flash partitions. It also shows current active image and active image on next booting.

Example This example shows how to show dual image information

```
Switch# show bootvar
Image  Version      Date                      Status       File Name
-----  ----------   --------------------   -----------  ----------
0       3.0.5        2014-09-22 16:53:53     Active         v3.0.5.bix
1       3.1.0         2014-10-09 18:32:26    Not active*   v3.1.0.bix
```

show config

Syntax **show** (**running-config** | **startup-config** | **backup-config**)

show running-config interfaces *IF_PORTS*

Parameter

running-config	Running configuration
startup-config	Startup configuration
backup-config	Backup configuration
IF_PORTS	Specify port to show its' ruuning config

Default No default value for this command.

Mode Privileged EXEC

Usage Our configuration file is text based. Therefore, we can show the configuration on terminal and read it by this command.

Use "**show config**" command to show configuration files stored in system.

Use "**show config interfaces**" command to show specific port configurations.

Example This example shows how to show startup configuration

```
Switch# show startup-config
! System Description: RTK RTL8328-24FE-4GE Switch
! System Version: v2.5.0-beta.32811
! System Name: SwitchEF0102

```

This example shows how to display running configuraiton on specific port.

```
Switch# show running-config interfaces gi1
interface gi1
 rate-limit ingress 128
```

show flash

Syntax **show flash**

Parameter

Default No default value for this command.

Mode Privileged EXEC

Usage Use "**show flash**" command to show all files' status which stored in flash.

Example This example shows how to show all files status stored in flash.

```
Switch# show flash
        File Name             File Size        Modified
------------------------ ---------------- ------------------------
 startup-config              1191              2000-01-01 00:00:23

 image1 (backup)             0
```

32. Surveillance VLAN

surveillance-vlan (Global)

Syntax **surveillance-vlan**
no surveillance -vlan

Parameter

Default Surveillance VLAN is disabled

Mode Global Configuration

Usage Use the **surveillance vlan** global configuration command to enable the functional Surveillance VLAN on the device.
Use the **no** form of this command to disable Surveillance VLAN function.
You can verify your setting by entering the **show surveillance vlan Privileged EXEC** command.

Example The following example shows how to enable Surveillance VLAN.
Switch(config)# **surveillance -vlan**

```
Switch# show surveillance -vlan
Administrate Surveillance VLAN state : disabled
Surveillance VLAN ID       : none (disable)
Surveillance VLAN Aging    : 1440 minutes
Surveillance VLAN CoS      : 6
Surveillance VLAN 1p Remark: disabled

OUI table
 OUI MAC   |  Description
-----------+-----------------
```

surveillance-vlan (Interface)

Syntax	**surveillance-vlan** **no surveillance-vlan**
Parameter	N/A
Default	Disable by default.
Mode	Interface Configuration
Usage	Use the **surveillance vlan** Interface configuration command to enable OUI surveillance VLAN configuration on an interface Use the **no** form of this command to disable Surveillance VLAN on an interfaces You can verify your setting by entering the **show surveillance vlan** **Privileged EXEC** command
Example	The following example how to enable Surveillance VLAN function in oui mode on an interface Switch(config)#**interface range GigabitEthernet 3** Switch(config-if)#**surveillance-vlan** Switch# **show surveillance-vlan interfaces GigabitEthernet 1-3** Port | State | Port Mode | Cos Mode ---------+-----------+----------------+----------- gi1 | Disabled | Auto | Src gi2 | Disabled | Auto | Src gi3 | Enabled | Auto | Src

surveillance-vlan vlan

Syntax	**surveillance-vlan vlan** <1-4094> **no surveillance-vlan vlan**

Parameter	<1-4094> Specify the Surveillance VLAN ID
Default	The default Surveillance VLAN ID is None.
Mode	Global Configuration
Usage	Use the **surveillance vlan id** global configuration command to configure the VLAN identifier of the surveillance VLAN statically. Use the **no** form of this command to restore surveillance VLAN id to default. You can verify your setting by entering the **show surveillance vlan** **Privileged EXEC** command
Example	The following example shows how to set Surveillance VLAN id. The VLAN id must be created first. Switch(config)# **surveillance-vlan vlan 128** Switch# **show surveillance-vlan** Administrate Surveillance VLAN state : enabled Surveillance VLAN ID 128 Surveillance VLAN Aging : 1440 minutes Surveillance VLAN CoS 6 Surveillance VLAN 1p Remark: disabled

surveillance-vlan oui-table

Syntax	**surveillance-vlan oui-table** A:B:C [DESCRIPTION] **no surveillance-vlan oui-table** [A:B:C]
Parameter	A:B:C OUI address(xx:xx:xx) DESCRIPTION OUI description string
Default	Default has no pre-defined OUI.
Mode	Global Configuration
Usage	Use the **surveillance vlan oui-table** global configuration command to add OUI mac address to OUI Table Use the **no** form of this command to remove all or specified OUI mac address.. You can verify your setting by entering the **show surveillance vlan** **Privileged EXEC** command

Example

This following example shows how to add OUI Mac.
Switch(config)# **surveillance-vlan oui-table 00:01:02 "Test"**
Switch# **show surveillance-vlan**
Administrate Surveillance VLAN state : enabled
Surveillance VLAN ID : 3
Surveillance VLAN Aging : 1440 minutes
Surveillance VLAN CoS : 6
Surveillance VLAN 1p Remark: disabled

OUI table
OUI MAC | Description
------------------+-----------------
00:01:02 | Test

surveillance-vlan cos (Global)

Syntax

surveillance-vlan cos <0-7> [remark]
no surveillance-vlan cos

Parameter

<0-7>	Specify the Surveillance VLAN Class Of Service
remark	Surveillance VLAN Remark setting

Default

The default cos value is 6, remark is disabled.

Mode

Global Configuration

Usage

Use the **surveillance vlan cos** global configurations command to configure the surveillance VLAN cos value and 1p remark function.
Use the "**no**" form to restore to default mode.
You can verify your setting by entering the **show surveillance vlan Privileged EXEC** command

Example

The following example show how to set cos value and enable 1p remark function
Switch(config)# **surveillance-vlan cos 7 remark**
Switch# **show surveillance-vlan**
Administrate Surveillance VLAN state : disabled
Surveillance VLAN ID 128
Surveillance VLAN Aging : 1440 minutes
Surveillance VLAN CoS 7
Surveillance VLAN 1p Remark: enabled

OUI table
OUI MAC | Description
-----------+-----------------
00:11:22 | desc

surveillance-vlan cos (Interface)

Syntax

surveillance-vlan cos (src | all)
no surveillance-vlan cos

Parameter

src	Specify QoS attributes are applied to packets with OUIs in the source MAC address.
All	Specify QoS attributes are applied to packets that are classified to the Surveillance VLAN.

Default

The default all port in Src mode.

Mode

Interface configuration

Usage

Use the **surveillance vlan cos mode** Interface configuration command to configure OUI surveillance VLAN cos mode configuration on an interface.
Use the "**no**" form to restore to default mode.
You can verify your setting by entering the **show surveillance-vlan interfaces Privileged EXEC** command

Example

The following example how to configure surveillance packet QoS attributes on an interface

```
Switch(config)#interface range GigabitEthernet 1-3
Switch(config-if -range)#surveillance-vlan cos all
Switch# show surveillance-vlan interfaces fa1-3
Port   | State    | Port Mode   | Cos Mode
---------+-----------+-----------------+-----------
gi1    | Disabled |    Auto     | All
gi2    | Disabled |    Auto     | All
gi3    | Disabled |    Auto     | All
```

surveillance-vlan mode

Syntax

surveillance-vlan mode (auto|manual)
no surveillance-vlan mode

Parameter

auto	Surveillance Member Port Join Voice VLAN Automatically
manual	Voice Member Port Join Voice VLAN Manually By Administrator

Default

The default is auto mode.

Mode

Interface Configuration

Usage	Use the **surveillance-vlan mode** global configuration command to configure the surveillance VLAN mode for interface. Use the "**no**" form to restore to default mode. You can verify your setting by entering the **show surveillance-vlan interfaces Privileged EXEC** command.

Example

The following example how to configure surveillance mode to manual
Switch(config)#**interface range GigabitEthernet 1-3**
Switch(config-if)#**surveillance-vlan mode manaul**
Switch# **show surveillance-vlan interfaces GigabitEthernet 1-3**

```
Port   | State    | Port Mode   | Cos Mode
---------+----------+----------------+-----------
gi1    | Disabled |    Manual   | Src
gi2    | Disabled |    Manual   | Src
gi3    | Disabled |    Manual   | Src
```

surveillance-vlan aging-time

Syntax	**surveillance-vlan aging-time** <30-65536> **no surveillance-vlan aging-time**
Parameter	<30-65536> Specify the Surveillance VLAN aging timeout interval in minutes
Default	The default aging-timeout value is 1440 minutes
Mode	Global Configuration
Usage	Use the **surveillance vlan aging-time** global configuration command to configure the surveillance VLAN aging timeout. Use the "**no**" form to restore to default time. You can verify your setting by entering the **show surveillance vlan Privileged EXEC** command

Example

The following example shows how to set aging time.
Switch(config)# **surveillance-vlan aging-time 720**
Switch# **show surveillance-vlan**

```
Administrate Surveillance VLAN state : disabled
Surveillance VLAN ID         : 1
Surveillance VLAN Aging      : 720 minutes
Surveillance VLAN CoS        : 5
Surveillance VLAN 1p Remark: enabled
```

```
OUI table
OUI MAC   |  Description
------------+-----------------
00:11:22  | desc
```

show surveillance-vlan

Syntax	**show surveillance-vlan** **show surveillance-vlan interfaces [**IF_PORTS]
Parameter	IF_PORTS — Specifies interfaces to display surveillance VLAN settings in OUI mode
Default	N/A
Mode	Privileged EXEC
Usage	Use the **show surveillance vlan** command in EXEC mode to display the surveillance VLAN status for all interfaces or for a specific interface if the surveillance VLAN type is OUI
Example	The following example show how to display surveillance vlan OUI mode settings

```
Switch# show surveillance-vlan
Administrate Surveillance VLAN state : disabled
Surveillance VLAN ID       : none (disable)
Surveillance VLAN Aging    : 720 minutes
Surveillance VLAN CoS       6
Surveillance VLAN 1p Remark: disabled

Switch# show surveillance-vlan interfaces GigabitEthernet 1-4
Surveillance VLAN Aging    : 720 minutes
Surveillance VLAN CoS       5
Surveillance VLAN 1p Remark: enabled

OOUI table
  OUI MAC  | Description
-------------------+-----------------
  00:01:02   | Test
```

33. Time

clock set

Syntax	**clock set HH:MM:SS (jan|feb|mar|apr|may|jun|jul|aug|sep|oct|nov|dec) <1-31> <2000-2035>**
Parameter	HH:MM:SS(jan|feb|mar|apr **|may|jun|jul|aug|sep|oct|nov|dec) <1-31> <2000-2035>** — Specify static time of year, month, day, hour, minute,second
Default	No default is defined. The clock set to 2000/01/01 08:00:00 by default at startup.
Mode	Privileged EXEC
Usage	Use the **clock set** command to set static time. The static time won't save to configuration file. You can verify your setting by entering the **show clock Privileged EXEC** command.
Example	The example shows how to set static time of switch. Switch# **clock set 00:00:00 dec 1 2000** 2000-12-01 00:00:00 UTC+8 switch# **show clock** 2000-12-01 00:02:10 UTC+8 Time set manually

clock timezone

Syntax	**clock timezone ACRONYM HOUR-OFFSET [minutes <0-59>]** **no clock timezone**	
Parameter	**ACRONYM**	The acronym of the time zone (1-4 chars)
	HOUR-OFFSET	<-12-13> Hours difference from UTC
	Minutes <1-59>	Minutes difference from UTC
Default	Default time zone is UTC+8.	
Mode	Global Configuration	
Usage	Use the **clock timezone** command to set timezone setting. Use the **no** form of this command to restore to default setting.	

	You can verify your setting by entering the **show clock detail Privileged EXEC** command.
Example	The example shows how to set time zone of switch and then restore to default time zone. switch(config)# **clock timezone test +5** switch# **show clock detail** 2000-11-30 21:27:58 test(UTC+5) Time set manually Time zone: Acronym is test Offset is UTC+5 switch(config)# **no clock timezone** switch# **show clock detail** 2000-12-01 00:30:59 UTC+8 Time set manually Time zone: Acronym is Offset is UTC+8

clock source

Syntax	**clock source (local|sntp)**

Parameter		
	local	Local
	sntp	SNTP Server

Default	Default is using local time.
Mode	Global Configuration
Usage	Use the **clock source** command to set the source of time. Use the no form of this command to restore to default setting. You can verify your setting by entering the **show clock detail Privileged EXEC** command.
Example	The example shows how to set clock source of switch. switch(config)# **clock source sntp**

```
switch# show clock detail

2000-12-01 00:35:47 UTC+8
Time source is sntp

Time zone:
Acronym is
Offset is UTC+8
```

clock summer-time

Syntax

clock summer-time ACRONYM date (jan|feb|mar|apr|may|jun|jul|aug|sep|oct|nov|dec) <1-31> <2000-2037> HH:MM (jan|feb|mar|apr|may|jun|jul|aug|sep|oct|nov|dec) <1-31> <2000-2037> HH:MM [<1-1440>]
clock summer-time ACRONYM recurring (usa|eu) [<1-1440>]
clock summer-time ACRONYM recurring (<1-5>|first|last) (sun|mon|tue|wed|thu|fri|sat) (jan|feb|mar|apr|may|jun|jul|aug|sep|oct|nov|dec) HH:MM (<1-5>|first|last) (sun|mon|tue|wed|thu|fri|sat) (jan|feb|mar|apr|may|jun|jul|aug|sep|oct|nov|dec) HH:MM [<1-1440>]
no clock summer-time

Parameter

ACRONYM	Specify acronym name of time zone
(jan|feb|mar|apr| may|jun|jul|aug|sep| oct|nov|dec) <1-31> <2000-2037> HH:MM (jan|feb|mar|apr| may|jun|jul|aug|sep| oct|nov|dec) <1-31> <2000-2037> HH:MM	Specify non-recurring daylight saving time duration.
<1-1440>	Specify adjust offset of daylight saving time
usa	Summer time rules are the United States rules. Start: Second Sunday in March End: First Sunday in November Time: 2 am local time
eu	Summer time rules are the European Union rules. Start: Last Sunday in March End: Last Sunday in October Time: 1 am local time
(<1-5>|first|last) (sun|mon| tue|wed|thu|fri|sat) (jan |feb|mar|apr|may|jun| jul|aug|sep|oct|nov|dec) HH:MM (<1-5>|first|last) (sun|mon|tue|wed|thu|fri|sat) (jan|feb|mar|apr|may| jun|jul|aug|sep|oct|nov|dec)	Specify ecurring daylight saving time duration.

	HH:MM
Default	No default daylight saving time is defined.
Mode	Global Configuration
Usage	Use the **clock summer-time** command to set daylight saving time for system time. The "**usa**" or "**eu**" means that use the global daylight saving policy which defined by international organization. In both the "**date**"and "**recurring**", the first part of the command specifies when summer time begins, and the second part specifies when it ends. All times are relative to the local time zone. The "**recurring**" means that adjust time every year within the month. Use the no form of this command to default setting. You can verify your setting by entering the **show clock detail** **Privileged EXEC** command.
Example	The example shows how to set clock summer time of switch. You can verify settings by the following show show clock command. switch(config)# **clock summer-time test recurring usa** switch# **show clock detail** Time zone: Acronym is Offset is UTC+8 Summertime: Acronym is test Recurring every year. Begins at 2 0 3 2:0 Ends at 1 0 11 2:0 Offset is 60 minutes.

show clock

Syntax	**show clock [detail]**
Parameter	detail Show timezone and summertime configuration
Default	No default is defined
Mode	Privileged EXEC

Usage	Use the **show clock** command to show clock of switch. The "**detail**" means that show more information of clock such as time zone and daylight saving time.
Example	The example shows how to show clock of switch and detail information. Switch334455(config)# **clock source sntp** Switch334455(config)# **clock summer-time DLS recurring usa** Switch334455(config)# **sntp host 192.168.1.100** Switch334455# **show clock** 2000-12-01 01:33:24 UTC+8 Time source is sntp Switch334455# **show clock detail** 2000-12-01 01:34:15 UTC+8 Time source is sntp Time zone: Acronym is Offset is UTC+8 Summertime: Acronym is DLS Recurring every year. Begins at 2 0 3 2:0 Ends at 1 0 11 2:0 Offset is 60 minutes.

sntp

Syntax	**sntp host HOSTNAME [port <1-65535>]** **no sntp**
Parameter	**HOSTNAME** Hostname String
Default	No default SNTP server defined. Default server port is 123 when server created.
Mode	Global Configuration
Usage	Use the sntp command to set remote SNTP server. Use the no form of this command to default setting. You can verify your setting by entering the **show sntp Privileged EXEC** command.

Example	The example shows how to set remote SNTP server of switch. switch(config)# **clock source sntp** switch(config)# **sntp host 192.168.1.100** switch# **show sntp** SNTP is Enabled SNTP Server address: 192.168.1.100 SNTP Server port: 123

show sntp

Syntax	**show sntp**
Parameter	None
Default	No default is defined
Mode	Privileged EXEC
Usage	Use the **show sntp** command to remote SNTP server information.
Example	The example shows how to show remote SNTP server. Switch334455# **show sntp** SNTP is Enabled SNTP Server address: 192.168.1.100 SNTP Server port: 123

34. UDLD

errdisable recovery cause udld

Syntax	**errdisable recovery cause udld** **no errdisable recovery cause udld**
Parameter	**N/A**
Default	Error disable auto recovery is disabled by default.
Mode	Global EXEC

Usage	Use the **errdisable recovery cause udld** to enable auto recovery of UniDirectional Link Detection (UDLD). Use the "**no**" to disable it.
Example	The example shows how to enable auto recovery of UniDirectional Link Detection (UDLD).

```
switch(config)# errdisable recovery cause udld
switch# show errdisable recovery
ErrDisable Reason  Timer Status
-------------------------+--------------
                bpduguard | disabled
                     udld | enabled
                 selfloop | disabled
          broadcast-flood | disabled
unknown-multicast-flood   | disabled
          unicast-flood   | disabled
                    acl   | disabled
          psecure-violation | disabled
          dhcp-rate-limit | disabled
                  arp-inspection | disabled

Timer Interval : 300 seconds

Interfaces that will be enabled at the next timeout:

Port |  Error Disable Reason    | Time Left
-----+-------------------------+------------
```

udld

Syntax	**udld** **no udld**
Parameter	**N/A**
Default	UDLD is disabled by default.
Mode	Interface Configuration
Usage	Use the **udld** command to enable UniDirectional Link Detection (UDLD) normal mode of interface. Use the no form of this command to restore to default setting. You can verify your setting by entering the **show udld interface Privileged EXEC** command.

Example	The example shows how to enable UniDirectional Link Detection (UDLD) normal mode in interface GigabitEthernet 1. switch(config)# **interface GigabitEthernet 1** switch(config-if)# **udld** switch# show udld interfaces GigabitEthernet 1 Port enable administrative configuration setting: Enabled Port enable operational state: Enabled Current bidirectional state: Unknown Current operational state: Link up Message interval: 7 Time out interval: 5 No neighbor cache information stored

udld aggressive

Syntax	**udld aggressive** **no udld aggressive**
Parameter	**N/A**
Default	UDLD aggressive mode is disabled by default.
Mode	Interface Configuration
Usage	Use the **udld aggressive** command to enable UniDirectional Link Detection (UDLD) aggressive mode of interface. Use the no form of this command to restore to default setting. You can verify your setting by entering the **show udld interface Privileged EXEC** command.
Example	The example shows how to enable udld aggressive mode in interface gi1. switch(config)# **interface gi1** switch(config-if)# **udld** switch# show udld interfaces gi1 Port enable administrative configuration setting: Enabled / in aggressive mode Port enable operational state: Enabled / in aggressive mode Current bidirectional state: Bidirectional Current operational state: Advertisement - SINGLE NEIGHBOR DETECTED

udld message time

Syntax	**udld message time** *message-time-interval*
Parameter	*message-time-interval* Specify the interval for sending message. Range is 1 -90 seconds.
Default	Default interval is 15 seconds.
Mode	Global Configuration
Usage	Use the **udld message time** to set interval of UniDirectional Link Detection (UDLD) sent message.
Example	The example shows how to set interval of UniDirectional Link Detection (UDLD) message. switch(config)# **udld message time 30**

udld reset

Syntax	**udld reset**
Parameter	N/A
Default	No default is defined
Mode	Privileged EXEC
Usage	Use the **udld reset** command to reset all interfaces disabled by the UniDirectional Link Detection (UDLD) and permit traffic to begin passing through them again. If the interface configuration is still enabled for UDLD, these ports begin to run UDLD again and are disabled for the same reason if the problem has not been corrected.
Example	The example shows how to reset all interfaces disabled by UDLD Switch# udld reset 1 ports shutdown by UDLD were reset.

show udld

Syntax

show udld
show udld interfaces *IF_NMLPORTS*

Parameter

IF_NMLPORTS	Specify the normal interfaces to display udld information

Default

No default is defined

Mode

Privileged EXEC

Usage

Use the **show udld** command to to display UniDirectional Link Detection (UDLD) administrative and operational status for all ports or the specified port.

Example

The example shows how to show UniDirectional Link Detection (UDLD) settings and operational status of interface gi1.

Switch334455(config)# **show udld interfaces gi1**
Interface gi1

Port enable administrative configuration setting: Enabled / in aggressive mode
Port enable operational state: Enabled / in aggressive mode
Current bidirectional state: Bidirectional
Current operational state: Advertisement - SINGLE NEIGHBOR DETECTED
Message interval: 15
Time out interval: 5

Entry 1

Expiration time: 20
Current neighbor state: Bidirectional
Device ID : COM4
Device name: com4
Port ID: gi3
Message interval: 7
Time out interval: 5
Neighbor echo 1 device: COM3
Neighbor echo 1 port: gi11

35. VLAN

vlan

Syntax

vlan
no vlan

Default

VLAN 1 created by default

Mode

Global Configuration

Usage

Use the **vlan** global configuration command to create VLAN.
Use the **no** form of this command to remove exist VLAN.
You can verify your setting by entering the **show vlan Privileged EXEC** command.

Example

The following example creates and removes a VLAN entry (100).

Switch# configure
Switch (config)# vlan 100
Switch# show vlan

```
VID |    VLAN Name    |  Untagged Ports   | Tagged Ports | Type
----+-----------------+-------------------+--------------+--------
  1 |      default    | fa1-48,gi1-4,lag1-8|          --- | Default
100 |      VLAN0100   |          ---      |          --- | Static
```

Name (vlan)

Syntax

name NAME

Parameter

NAME	Specify the name of the VLAN (Max. 32 chars).

Default

Default name of new vlan is VLANxxxx. Xxxx is 4-digit vlan number.

Mode

VLAN Configuration

Usage

Use the **name** vlan configuration command to set name of vlan
You can verify your setting by entering the **show vlan Privileged EXEC** command.

Example

This example sets the VLAN name of VLAN 100 to be `VLAN-one-hundred`.

```
SwitchEF0101(config)# vlan 100
SwitchEF0101(config-vlan)# name VLAN-one-hundred
Switch# show vlan
VID |    VLAN Name   | Untagged Ports   |  Tagged Ports | Type
-------+--------------------------+--------------------------+----------------------+---------
   1 |         default | fa1-48,gi1-4,lag1-8 |          --- | Default
 100 | VLAN-one-hundred |          --- |          --- | Static
```

switchport mode

Syntax

switchport mode (access | hybrid | trunk [uplink] | tunnel)

Parameter

access	Access port.
hybrid	Hybrid port.
trunk	Trunk port.
uplink	Uplink mode.
tunnel	Tunnel port.

Default

Default is trunk mode of all interfaces

Mode

Port Configuration

Usage

The VLAN mode is used to configure the port for different port role.
Access port: Accepts only untagged frames and join an untagged VLAN.
Hybrid port: Support all functions as defined in IEEE 802.1Q specification.
Trunk port: An untagged member of one VLAN at most, and is a tagged member of zero or more VLANs. If it is an uplink port, it can recognize double tagging on this port.
Tunnel port: Port-based Q-in-Q mode.

Use the **switch mode** port configuration command to set mode of interface
You can verify your setting by entering the **show interfaces switchport Privileged EXEC** command.

Example

This example sets VLAN mode to Access port.

```
SwitchEF0101(config)# interface GigabitEthernet 12
SwitchEF0101(config-if)# switchport mode access
SwitchEF0101# show interfaces switchport GigabitEthernet 12
Port : gi12
Port Mode : Access
Gvrp Status : disabled
Ingress Filtering : enabled
Acceptable Frame Type : untagged-only
Ingress UnTagged VLAN ( NATIVE ) : 1
Trunking VLANs Enabled:

Port is member in:
```

```
 Vlan   Name        Egress rule
------- ----------------------- -----------------
   1   default       Untagged

Forbidden VLANs:
 Vlan   Name
------- ----------------------

SwitchEF0101#
```

switchport hybrid pvid

Syntax	**switchport hybrid pvid <1-4094>**
Parameter	<1-4094> VLAN ID (e.g. 100)
Default	Default pivd is 1.
Mode	Port Configuration
Usage	Use the **switch hybrid pivd** port configuration command to set pvid of interface. You can verify your setting by entering the **show interfaces switchport Privileged EXEC** command.
Example	This example sets PVID to 100.

```
SwitchEF0101(config)# interface GigabitEthernet 10
SwitchEF0101(config-if)# switchport mode hybrid
SwitchEF0101(config-if)# switchport hybrid pvid 100
SwitchEF0101# show interfaces switchport GigabitEthernet 10
Port : gi10
Port Mode : Hybrid
Gvrp Status : disabled
 Ingress Filtering : enabled
Acceptable Frame Type : all
Ingress UnTagged VLAN ( NATIVE ) : 100
Trunking VLANs Enabled:

Port is member in:
 Vlan    Name        Egress rule
------- ----------------------- -----------------
   1   default        Untagged
```

```
Forbidden VLANs:
 Vlan  Name
------- ----------------------

SwitchEF0101#
```

switchport hybrid ingress-filtering

Syntax

switchport bybrid ingress-filtering
no switchport hybrid ingress-filtering

Default

Default is enabled

Mode

Port Configuration

Usage

Use the **switchport hybrid ingress-filtering** port configuration command to enable vlan ingress filter.
Use the **no** form of this command to disable.

You can verify your setting by entering the **s show interfaces switchport Privileged EXEC** command.

Example

This example sets ingress-filtering to disable.

```
SwitchEF0101(config)# interface GigabitEthernet 10
SwitchEF0101(config-if)# switchport mode hybrid
SwitchEF0101(config-if)#no switchport hybrid ingress-filtering
SwitchEF0101# show interfaces switchport GigabitEthernet 10
Port : gi10
Port Mode : Hybrid
Gvrp Status : disabled
Ingress Filtering : disabled
Acceptable Frame Type : all
Ingress UnTagged VLAN ( NATIVE ) : 100
Trunking VLANs Enabled:

Port is member in:
 Vlan    Name         Egress rule
------- ---------------------- -----------------
   1   default         Untagged

Forbidden VLANs:
 Vlan  Name
------- ----------------------

SwitchEF0101#
```

switchport hybrid acceptable-frame-type

Syntax

switchport hybrid acceptable-frame-type (all | tagged-only | untagged-only)

Parameter

all	Accept tagged and untagged frames
tagged-only	Only accept tagged frames
untagged-only	Only accept untagged and priority-tagged frames

Default

Default is accept all frames

Mode

Port Configuration

Usage

Use the **switchport hybrid accept-frame-type** port configuration command to choose which type of frame can be accepted.

You can verify your setting by entering the **s show interfaces switchport Privileged EXEC** command

Example

This example sets acceptable-frame-type to tagged-only.

```
SwitchEF0101(config)# interface fa10
SwitchEF0101(config-if)# switchport mode hybrid
SwitchEF0101(config-if)# switchport hybrid acceptable-frame-type tagged-only
SwitchEF0101# show interfaces switchport fa10
Port : gi10
Port Mode : Hybrid
Gvrp Status : disabled
Ingress Filtering : disabled
Acceptable Frame Type : tagged-only
Ingress UnTagged VLAN ( NATIVE ) : 100
Trunking VLANs Enabled:

Port is member in:
 Vlan    Name         Egress rule
------- ---------------------- -----------------
   1   default         Untagged

Forbidden VLANs:
 Vlan  Name
------- ----------------------

SwitchEF0101#
```

switchport hybrid allowed vlan

Syntax

switchport hybrid allowed vlan add VLAN-LIST [(tagged|untagged)]
switchport hybrid allowed vlan remove VLAN-LIST

Parameter

VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
tagged	Tagged
untagged	Untagged

Default

Only vlan 1 is untagged member by default.
Default is tagged member when added.

Mode

Port Configuration

Usage

Use the **switchport hybrid allow vlan add** port configuration command to allow vlan on interface.
Use the **switchport hybrid allow vlan remove** port configuration command to remove vlan on interface.
You can verify your setting by entering the **s show interfaces switchport Privileged EXEC** command.

Example

This example sets port fa10 VLAN to join the VLAN 100 as tagged member.

```
SwitchEF0101(config)# interface GigabitEthernet 10
SwitchEF0101(config-if)# switchport hybrid allowed vlan add 100-105
SwitchEF0101(config-if)# switchport hybrid allowed vlan remove 105
SwitchEF0101# show interfaces switchport GigabitEthernet 10
Port : gi10
Port Mode : Hybrid
Gvrp Status : disabled
 Ingress Filtering : disabled
Acceptable Frame Type : tagged-only
Ingress UnTagged VLAN ( NATIVE ) : 100
Trunking VLANs Enabled:

Port is member in:
 Vlan       Name                             Egress rule
------- ---------------------------------- -----------------
   1      default                          Untagged
 100      VLAN-one-hundred                 Tagged
 101      VLAN0101                         Tagged
 102      VLAN0102                         Tagged
 103      VLAN0103                         Tagged
 104      VLAN0104                         Tagged

Forbidden VLANs:
 Vlan     Name
------- ----------------------

SwitchEF0101#
```

switchport access vlan

Syntax	**switchport access vlan <1-4094>** **No switchport access vlan**
Parameter	<1-4094> VLAN ID (e.g. 100)
Default	Default is vlan 1
Mode	Port Configuration
Usage	Use the **switchport access vlan** port configuration command to set native vlan on interface. The vlan will be pvid on interface as well. Use the **no** form of this command to restore to default vlan You can verify your setting by entering the **show interfaces switchport Privileged EXEC** command.
Example	This example sets Access port fa10 native VLAN ID to 100.

```
SwitchEF0101(config)# interface GigabitEthernet 10
SwitchEF0101(config-if)# switchport mode access
SwitchEF0101(config-if)# switchport access vlan 100
SwitchEF0101# show interfaces switchport GigabitEthernet 10
Port : gi10
Port Mode : Access
Gvrp Status : disabled
Ingress Filtering : enabled
Acceptable Frame Type : untagged-only
Ingress UnTagged VLAN ( NATIVE ) : 100
Trunking VLANs Enabled:

Port is member in:
 Vlan  Name             Egress rule
------- ---------------------     -----------------
 100  VLAN-one-hundred   Untagged

Forbidden VLANs:
 Vlan    Name
------- ----------------------
```

switchport tunnel vlan

Syntax	**switchport tunnel vlan <1-4094>** **no switchport tunnel vlan**
Parameter	<1-4094> VLAN ID (e.g. 100)

Default	Default is vlan 1
Mode	Port Configuration
Usage	Use the **switchport tunnel vlan** port configuration command to set dot1q tunnel vlan on interface. The vlan will be pvid on interface as well. Use the **no** form of this command to remove vlan on interface. The tunnel vlan id will set to reserve vlan 4095. You can verify your setting by entering the **s show interfaces switchport Privileged EXEC** command.
Example	This example sets Tunnel port gi10 native VLAN to 100.

```
SwitchEF0101(config)# interface GigabitEthernet 10
SwitchEF0101(config-if)# switchport mode tunnel
SwitchEF0101(config-if)# switchport tunnel vlan 100
SwitchEF0101# show interfaces switchport GigabitEthernet 10
Port : gi10
Port Mode : Tunnel
Gvrp Status : disabled
 Ingress Filtering : enabled
Acceptable Frame Type : all
Ingress UnTagged VLAN ( NATIVE ) : 100
Trunking VLANs Enabled:

Port is member in:
 Vlan  Name            Egress rule
------- ----------------------    -----------------
 100  VLAN-one-hundred   Untagged

Forbidden VLANs:
 Vlan    Name
------- ----------------------
```

switchport trunk native vlan

Syntax	**switchport trunk native vlan <1-4094>** **no switchport trunk native vlan**
Parameter	<1-4094> VLAN ID (e.g. 100)
Default	Default is vlan 1
Mode	Port Configuration

Usage	Use the **switchport trunk native vlan** port configuration command to set native vlan on interface. Use the **no** form of this command to restore to default vlan. You can verify your setting by entering the **s show interfaces switchport Privileged EXEC** command.

Example	This example sets Trunk port fa10 native VLAN to 100. SwitchEF0101(config)# interface GigabitEthernet 10 SwitchEF0101(config-if)# switchport mode trunk SwitchEF0101(config-if)# switchport trunk native vlan 100 SwitchEF0101# show interfaces switchport GigabitEthernet 10 Port : gi10 Port Mode : Trunk Gvrp Status : disabled Ingress Filtering : enabled Acceptable Frame Type : all Ingress UnTagged VLAN (NATIVE) : 100 Trunking VLANs Enabled: Port is member in: Vlan Name Egress rule ------- ---------- ---------- 100 VLAN-one-hundred Untagged Forbidden VLANs: Vlan Name ------- ----------

switchport trunk allowed vlan

Syntax	**switchport trunk allowed vlan (add | remove) (VLAN-LIST | all)**

Parameter	add	Specify which VLAN to add to the port.
	remove	Specify the VLAN to remove from port
	VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
	all	

Mode	Port Configuration

Usage	Use the **switchport trunk allow vlan add** port configuration command to allow vlan on interface. Use the **switchport trunk allow vlan remove** port configuration command to remove vlan on interface. You can verify your setting by entering the **s show interfaces switchport Privileged EXEC** command.

Example This example sets Trunk port fa10 to add the allowed VLAN 100.

```
SwitchEF0101(config)# interface GigabitEthernet 10
SwitchEF0101(config-if)# switchport trunk allowed vlan add 100
SwitchEF0101# show interfaces switchport GigabitEthernet 10
Port : gi10
Port Mode :  Trunk
Gvrp Status : disabled
Ingress Filtering : enabled
Acceptable Frame Type : all
Ingress UnTagged VLAN ( NATIVE ) : 1
Trunking VLANs Enabled: 100

Port is member in:
 Vlan  Name            Egress rule
------- ---------------------- -----------------
   1  default           Untagged
   100  VLAN-one-hundred  Tagged

Forbidden VLANs:
 Vlan     Name
------- ----------------------
```

switchport default-vlan tagged

Syntax

switchport default-vlan tagged
no switchport default-vlan tagged

Parameter None

Default Default is untagged

Mode Port Configuration

Usage

Use the **switchport default vlan tagged** port configuration command to become default vlan tagged member.
Use the **no switchport default vlan tagged** port configuration command to restore to default
You can verify your setting by entering the **s show interfaces switchport Privileged EXEC** command

Example This example sets Trunk port fa10 membership with the default VLAN to tag.

```
SwitchEF0101(config)# interface fa10
SwitchEF0101(config-if)# switchport default-vlan tagged
SwitchEF0101# show interfaces switchport fa10
Port : fa10
```

```
Port Mode : Hybrid
Ingress Filtering : enabled
Acceptable Frame Type : all
Ingress UnTagged VLAN ( NATIVE ) : 1
Trunking VLANs Enabled:

Port is member in:
 Vlan   Name         Egress rule
------- ---------------------- ----------------
1  default      Tagged

Forbidden VLANs:
 Vlan   Name
------- ----------------------
```

switchport default-vlan tagged

Syntax	**switchport default-vlan tagged** **no switchport default-vlan tagged**
Parameter	None
Default	Default is untagged
Mode	Port Configuration
Usage	Use the **switchport default vlan tagged** port configuration command to become default vlan tagged member. Use the **no switchport default vlan tagged** port configuration command to restore to default You can verify your setting by entering the **s show interfaces switchport Privileged EXEC** command
Example	This example sets Trunk port fa10 membership with the default VLAN to tag.

```
SwitchEF0101(config)# interface GigabitEthernet 10
SwitchEF0101(config-if)# switchport mode hybrid
SwitchEF0101(config-if)# switchport default-vlan tagged
SwitchEF0101# show interfaces switchport GigabitEthernet 10
Port : gi10
Port Mode : Hybrid
Gvrp Status : disabled
 Ingress Filtering : enabled
Acceptable Frame Type : all
Ingress UnTagged VLAN ( NATIVE ) : 1
Trunking VLANs Enabled:
```

```
Port is member in:
 Vlan   Name          Egress rule
------- ---------------------- -----------------
   1   default         Tagged

Forbidden VLANs:
 Vlan   Name
------- ----------------------
```

switchport forbidden default-vlan

Syntax	**switchport forbidden default-vlan** **no switchport forbidden default-vlan**
Parameter	None
Default	Default is allowed
Mode	Port Configuration
Usage	Use the **switchport forbidden default-vlan** port configuration command to forbid default-vlan on interface. Use the **no switchport forbidden default-vlan** port configuration command to restore to default You can verify your setting by entering the **s show interfaces switchport Privileged EXEC** command
Example	This example sets the membership of the default VLAN with port gi10 to forbidden.

```
SwitchEF0101(config)# interface GigabitEthernet 10
SwitchEF0101(config-if)# switchport forbidden default-vlan
SwitchEF0101# show interfaces switchport GigabitEthernet 10
Port : gi10
Port Mode :  Trunk
Gvrp Status : disabled
Ingress Filtering : enabled
Acceptable Frame Type : all
Ingress UnTagged VLAN ( NATIVE ) : 4095
Trunking VLANs Enabled:

Port is member in:
 Vlan    Name          Egress rule
------- ---------------------- -----------------
Forbidden VLANs:
 Vlan    Name
------- ----------------------
   1    default
```

switchport forbidden vlan

Syntax **switchport forbidden vlan (add | remove) VLAN-LIST**

Parameter

add	Specify which VLAN to add to the port.
remove	Specify the VLAN to remove from port
VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094

Default No vlan is forbidden by default

Mode Port Configuration

Usage

Use the **switchport forbidden vlan add** port configuration command to forbid vlan on interface.
Use the **switchport forbidden vlan remove** port configuration command to accpet vlan on interface.
You can verify your setting by entering the **s show interfaces switchport Privileged EXEC** command

Example

This example sets the membership of the VLAN 100 with port gi10 to forbidden.

```
SwitchEF0101(config)# interface GigabitEthernet 10
SwitchEF0101(config-if)# switchport forbidden vlan add 100
SwitchEF0101# show interfaces switchport GigabitEthernet 10
Port : gi10
Port Mode :  Trunk
Gvrp Status : disabled
Ingress Filtering : enabled
Acceptable Frame Type : all
Ingress UnTagged VLAN ( NATIVE ) : 1
Trunking VLANs Enabled: 100

Port is member in:
 Vlan    Name        Egress rule
------- ---------------------- ----------------
   1    default       Untagged

Forbidden VLANs:
 Vlan  Name
------- ----------------------
  100  VLAN-one-hundred
```

switchport vlan tpid

Syntax	**switchport vlan tpid (0x8100|0x88a8|0x9100|0x9200)**
Parameter	(0x8100|0x88a8|0x9100|0x9200) Tag-protocol-id (0x8100|0x88a8|0x9100|0x9200)
Default	Default TPID is 0x8100
Mode	Port Configuration
Usage	Use the **switchport vlan tpid** port configuration command to set TPID on interface. You can verify your setting by entering the **s show running-config Privileged EXEC** command
Example	This example sets the TPID to 0x9100 on interface GigabitEthernet 10. SwitchEF0101(config)# interface GigabitEthernet 10 SwitchEF0101(config-if)# switchport mode trunk uplink SwitchEF0101(config-if)# switchport vlan tpid 0x9100

management-vlan

Syntax	**management-vlan vlan <1-4094> no management-vlan**
Parameter	<1-4094> VLAN ID (e.g. 100)
Default	Default management vlan is 1.
Mode	Global Configuration
Usage	Use the **management vlan** Global Configuration mode command to set management vlan id. Vlan id must be created first. Use the **no** form of this command to restore to default setting. You can verify your setting by entering the **show management-vlan Privileged EXEC** command
Example	(1) The following example specifies that management vlan 2 is created Switch(config)#vlan 2

Switch(config)# management-vlan vlan 2
(2)The following example specifies that management-vlan is restored to be default VLAN.
Switch(config)# no management-vlan

show vlan

Syntax **show vlan [(VLAN-LIST|dynamic|static)]**

Parameter

VLAN-LIST	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
dynamic	Display dynamic entries
mac-vlan	MAC-based VLAN configuration
protocol-vlan	Protocol-based VLAN configuration
static	Display static entries

Default Nones

Mode Privileged EXEC

Usage Display information about vlan entry

Example

The following example specifies that show vlan Switch# show vlan

```
 VID  | VLAN Name    | Untagged Port    | Tagged Port | Type
------+--------------+------------------+-------------+---------
   1  |    default   | fa1-8,fa10-48,lag1-8 |     ---     |
Default 100 | VLAN-one-hundred |   ---    |     ---     | Static
 101 |     VLAN0101 |      ---         |     ---     | Static
 102 |     VLAN0102 |      ---         |     ---     | Static
```

show vlan interface membership

Syntax **show vlan VLAN-LIST interfaces IF_PORTS membership**

Parameter

VLAN-List	VLAN List (e.g. 3,6-8): The range of VLAN ID is 1 to 4094
IF_PORTS	Specify interface is to show

Default Nones

Mode Privileged EXEC

Usage Display information about vlan membership on interfaces.

Example

The following example specifies that show vlan interface membership Switch# show vlan 100 interfaces GigabitEthernet 10 membership

```
VLAN ID   : 100
VLAN Type : Static
---------+--------------
Port   | Membership
---------+--------------
gi 10   | Forbidden
---------+--------------
```

show interface switchport

Syntax

show interface switchport IF_PORTS

Parameter

IF_PORTS Gigabit ethernet interface to configure

Default

None

Mode

Privileged EXEC

Usage

Display information about default vlan

Example

The following example specifies that show interfacce switchport.

```
SwitchEF0101(config)# interface GigabitEthernet 10
SwitchEF0101(config-if)# switchport trunk allowed vlan add 100
SwitchEF0101# show interfaces switchport GigabitEthernet 10
Port : gi10
Port Mode :  Trunk
Ingress Filtering : enabled
Acceptable Frame Type : all
Ingress UnTagged VLAN ( NATIVE ) : 1
Trunking VLANs Enabled: 100

Port is member in:
 Vlan   Name              Egress rule
------- ----------------------      ----------------
   1   default             Untagged
 100   VLAN-one-hundred    Tagged

Forbidden VLANs:
 Vlan       Name
```

show management-vlan

Syntax	**show management-vlan**
Parameter	None
Default	Nones
Mode	Privileged EXEC
Usage	Display information about management vlan
Example	The following example specifies that show management vlan Switch(config)# show management-vlan Management VLAN-ID : default(1)

36. Voice VLAN

voice-vlan (Global)

Syntax	**voice-vlan** **no voice-vlan**
Parameter	
Default	Voice VLAN is disabled
Mode	Global Configuration
Usage	Use the **voice vlan** global configuration command to enable the functional Voice VLAN on the device. Use the **no** form of this command to disable voice vlan function. You can verify your setting by entering the **show voice vlan Privileged EXEC** command.
Example	The following example shows how to enable voice vlan. Switch(config)# **voice-vlan** Switch# **show voice-vlan** Administrate Voice VLAN state : enabled Voice VLAN ID : 2

```
Voice VLAN Aging    : 1440 minutes
Voice VLAN CoS      : 6
Voice VLAN 1p Remark: disabled
```

voice-vlan (Interface)

Syntax	**voice-vlan** **no voice-vlan**
Parameter	N/A
Default	The default all port admin-staus is disabled.
Mode	Interface Configuration
Usage	Use the **voice vlan** Interface configuration command to enable OUI voice VLAN configuration on an interface Use the **no** form of this command to disable voice vlan on an interfaces You can verify your setting by entering the **show voice vlan Privileged EXEC** command
Example	The following example how to enable voice VLAN function in oui mode on an interface Switch(config)#**interface range GigabitEthernet 1-3** Switch(config-if)#**voice-vlan** Switch# **show voice-vlan interfaces GigabitEthernet 1-8** Voice VLAN Aging : 1440 minutes Voice VLAN CoS : 6 Voice VLAN 1p Remark: disabled OUI table OUI MAC | Description ----------+---------- 00:E0:BB | 3COM 00:03:6B | Cisco 00:E0:75 | Veritel 00:D0:1E | Pingtel 00:01:E3 | Siemens 00:60:B9 | NEC/Philips 00:0F:E2 | H3C 00:09:6E | Avaya Port | State | Port Mode | Cos Mode -------+----------+----------+---------- gi1 | Enabled | Auto | Src gi2 | Enabled | Auto | Src gi3 | Enabled | Auto | Src gi4 | Disabled | Auto | Src

gi5	Disabled	Auto	Src
gi6	Disabled	Auto	Src
gi7	Disabled	Auto	Src
gi8	Disabled	Auto	Src

voice-vlan vlan

Syntax

voice-vlan vlan <2-4094>
no voice-vlan vlan

Parameter

<2-4094>	Specify the voice vlan Identifier

Default

The default Voice VLAN ID is None.

Mode

Global Configuration

Usage

Use the **voice vlan id** global configuration command to configure the VLAN identifier of the voice VLAN statically.
Use the **no** form of this command to restore voice vlan id to default.
You can verify your setting by entering the **show voice vlan Privileged EXEC** command

Example

The following example shows how to set Voice vlan id. The vlan id must be created first.
Switch(config)# **voice-vlan vlan 128**
Switch# **show voice-vlan**
Administrate Voice VLAN state : enabled
Voice VLAN ID : 128
Voice VLAN Aging : 1440 minutes
Voice VLAN CoS 6
Voice VLAN 1p Remark: disabled

voice-vlan oui-table

Syntax

voice-vlan oui-table A:B:C [DESCRIPTION]
no voice-vlan oui-table [A:B:C]

Parameter

A:B:C	OUI address(xx:xx:xx)
DESCRIPTION	OUI description string

Default

The system default has 8 oui addresses.

Mode	Global Configuration
Usage	Use the **voice vlan oui-table** global configuration command to add oui mac address to OUI Table Use the **no** form of this command to remove all or specified oui mac address.. You can verify your setting by entering the **show voice vlan Privileged EXEC** command
Example	This following example shows how to add OUI Mac. Switch(config)# **voice-vlan oui-table 00:01:02 "Test"** Switch# **show voice-vlan interfaces 1-28** Voice VLAN Aging : 1440 minutes Voice VLAN CoS : 6 Voice VLAN 1p Remark: disabled OUI table OUI MAC | Description ----------+---------- 00:E0:BB | 3COM 00:03:6B | Cisco 00:E0:75 | Veritel 00:D0:1E | Pingtel 00:01:E3 | Siemens 00:60:B9 | NEC/Philips 00:0F:E2 | H3C 00:09:6E | Avaya 00:01:02 | Test Port | State | Port Mode | Cos Mode ---------+----------+----------+---------- gi1 | Disabled | Auto | Src gi2 | Disabled | Auto | Src gi3 | Disabled | Auto | Src ……

voice-vlan cos (Global)

Syntax	**voice-vlan cos** <0-7> [remark] **no voice-vlan cos**	
Parameter	<0-7>	Specify the voice VLAN Class of Service
	remark	voice VLAN Remark setting
Default	The default cos value is 6, remark is disabled.	
Mode	Global Configuration	

Usage	Use the **voice vlan cos** global configuration command to configure the voice VLAN cos value and 1p remark function Use the "**no**" form to restore to default mode. You can verify your setting by entering the **show voice vlan Privileged EXEC** command

Example	The following example show how to set cos value and enable 1p remark function Switch(config)# **voice-vlan cos 7 remark** Switch# **show voice-vlan** Administrate Voice VLAN state : disabled Voice VLAN ID : 128 Voice VLAN Aging : 1440 minutes Voice VLAN CoS : 7 Voice VLAN 1p Remark: enabled

voice-vlan cos (Interface)

Syntax	**voice-vlan cos (src | all)** **no voice-vlan cos**

Parameter		
	src	QoS attributes are applied to packets from IP phones
	All	QoS attributes are applied on all packets that are classified to the Voice VLAN.

Default	The default all port in Src mode.
Mode	Interface configuration
Usage	Use the **voice vlan cos** Interface configuration command to configure OUI voice VLAN cos mode configuration on an interface Use the "**no**" form to restore to default mode. You can verify your setting by entering the **show voice-vlan interfaces Privileged EXEC** command
Example	The following example how to configure voice packet QoS attributes on an interface Switch(config)#**interface range GigabitEthernet 1-3** Switch(config-if)#**voice-vlan cos all** Switch# **show voice-vlan interfaces GigabitEthernet 1-8** Voice VLAN Aging : 1440 minutes Voice VLAN CoS 7 Voice VLAN 1p Remark: enabled OUI table OUI MAC | Description

```

voice-vlan mode

Syntax	**voice-vlan mode (auto|manual)** **no voice-vlan mode**
Parameter	**auto** — Voice Member Port Join Voice VLAN Automatically **manual** — Voice Member Port Join Voice VLAN Manually By Administrator.
Default	The default is auto mode.
Mode	Interface Configuration
Usage	Use the **voice-vlan mode** global configuration command to configure the voice VLAN mode for interface. Use the "**no**" form to restore to default mode. You can verify your setting by entering the **show voice-vlan interfaces Privileged EXEC** command.
Example	The following example how to configure voice mode to manual Switch(config)#**interface range GigabitEthernet 1-3** Switch(config-if)#**voice-vlan mode manaul** Switch# **show voice-vlan interfaces GigabitEthernet 1-8** Voice VLAN Aging : 1440 minutes Voice VLAN CoS : 7 Voice VLAN 1p Remark: enabled

voice-vlan aging-time

Syntax	**voice-vlan aging-time** <30-65536> **no voice-vlan aging-time**
Parameter	<30-65536> Specify the aging time in minutes
Default	The default aging-timeout value is 1440 minutes
Mode	Global Configuration
Usage	Use the **voice vlan aging-time** global configuration command to configure the voice VLAN aging timeout. Use the "**no**" form to restore to default time. You can verify your setting by entering the **show voice vlan Privileged EXEC** command
Example	The following example shows how to set aging time. Switch(config)# **voice-vlan aging-time 720** Switch# **show voice-vlan** Administrate Voice VLAN state : disabled

```
Voice VLAN ID        1
Voice VLAN Aging    : 720 minutes
Voice VLAN CoS       5
Voice VLAN 1p Remark: enabled
```

show voice-vlan

Syntax

show voice-vlan
show voice-vlan interfaces [IF_PORTS]

Parameter

IF_PORTS	Specifies intefaces to display voice VLAN settings in oui mode

Default

N/A

Mode

Privileged EXEC

Usage

Use the **show voice vlan** command in EXEC mode to display the voice VLAN status for all interfaces or for a specific interface if the voice VLAN type is OUI

Example

The following example show how to display voice vlan oui mode settings
Switch# show voice-vlan

```
Administrate Voice VLAN state   : disabled
Voice  VLAN  ID  :  none  (disable)
Voice  VLAN  Aging  :  720  minutes
Voice VLAN CoS       6
Voice VLAN 1p Remark: disabled
```

```
Switch# show voice-vlan interfaces GigabitEthernet1-4
Voice VLAN Aging    : 720 minutes
Voice VLAN CoS       5
Voice VLAN 1p Remark: enabled

37. PoE

PoE Status Informatin

Syntax **show poe interface status**

Parameter

interface	Interface specific description

Default N/A

Mode Privileged EXEC

Usage Use the **show poe interface status** command in EXEC mode to display the poe status.

Example The following example show how to display poe status mode
Switch# show poe interface status

Interface	PoE Control	PoE Detection	Limit Power	Current Power	Priority	PD Class
gi1	Enable	Disable	32W	0.0W	Low	N/A
gi2	Enable	Disable	32W	0.0W	Low	N/A
gi3	Enable	Disable	32W	0.0W	Low	N/A
gi4	Enable	Disable	32W	0.0W	Low	N/A
gi5	Enable	Disable	32W	0.0W	Low	N/A
gi6	Enable	Disable	32W	0.0W	Low	N/A
gi7	Enable	Disable	32W	0.0W	Low	N/A
gi8	Enable	Disable	32W	0.0W	Low	N/A
gi9	Enable	Disable	32W	0.0W	Low	N/A
gi10	Enable	Disable	32W	0.0W	Low	N/A

PoE powersupply

Syntax

show poe powersupply

Parameter

powersupply	Power supply info

Default

N/A

Mode

Privileged EXEC

Usage

Use the **show** poe powersupply command in EXEC mode to display the poe status.

Example

The following example show how to display poe status mode
Switch# show poe powersupply

```
POE Work Status          : online
PoE Port Number          : 24
PoE Support Type         : 802.3af/802.3at
PoE Hardware Version     : V1.0
PoE MCU Software Version : 2.0
PoE Voltage              : 54.7V
PoE Total Power          : 300W
PoE Consumption Power    : 0.0W
PoE Chip Temperature Info:
----------------------------------------
PoE ChipNumber  Temperature
----------------------------------------
1               61
2               58
3               55
```

PoE port

Syntax **poe enable**

Parameter

enable	enable power on port.
max_power	port max power
Priority	PoE priority for port

Default Default is enabled

Mode Port Configuration

Usage Use the **poe enable** port configuration command to set enable power on port.
Use the **no** form of this command to set disabled power on port.
You can verify your setting by entering the **show poe interface status EXEC** command.

Example This example sets poe port GigabitEthernet 10 power to disabled.

```
Switch(config)# interface GigabitEthernet 10
Switch(config-if)# no poe enable
Switch# show poe interface status
```

Interface	PoE Control	PoE Detection	Limit Power	Current Power	Priority	PD Class
gi1	Disable	Disable	32W	0.0W	Low	N/A
gi2	Enable	Disable	32W	0.0W	Low	N/A
gi3	Enable	Disable	32W	0.0W	Low	N/A
gi4	Enable	Disable	32W	0.0W	Low	N/A
gi5	Enable	Disable	32W	0.0W	Low	N/A
gi6	Enable	Disable	32W	0.0W	Low	N/A
gi7	Enable	Disable	32W	0.0W	Low	N/A
gi8	Enable	Disable	32W	0.0W	Low	N/A
gi9	Enable	Disable	32W	0.0W	Low	N/A
gi10	Enable	Disable	32W	0.0W	Low	N/A
gi11	Enable	Disable	32W	0.0W	Low	N/A
gi12	Enable	Disable	32W	0.0W	Low	N/A
gi13	Enable	Disable	32W	0.0W	Low	N/A
gi14	Enable	Disable	32W	0.0W	Low	N/A
gi15	Enable	Disable	32W	0.0W	Low	N/A
gi16	Enable	Disable	32W	0.0W	Low	N/A
gi17	Enable	Disable	32W	0.0W	Low	N/A
gi18	Enable	Disable	32W	0.0W	Low	N/A
gi19	Enable	Disable	32W	0.0W	Low	N/A

gi20	Enable	Disable	32W	0.0W	Low	N/A
gi21	Enable	Disable	32W	0.0W	Low	N/A
gi22	Enable	Disable	32W	0.0W	Low	N/A
gi23	Enable	Disable	32W	0.0W	Low	N/A
gi24	Enable	Disable	32W	0.0W	Low	N/A

38. Onvif

Onvif server

Syntax **onvif server enable**

Parameter enable Enable onvif detect device

Default Default is disabled

Mode Privileged EXEC

Usage Use the **Onvif server enable** command in EXEC mode to set the onvif server enable.

You can verify your setting by entering the **show onvif server EXEC** Command.

Example The following example show how to set onvif detect device enable
Switch(config)# onvif server enable
Switch# show onvif server

Onvif server status:Enable

Onvif detect

Syntax **onvif detect enable**

Parameter enable Enable onvif detect device

Default Default is disabled

Mode Privileged EXEC

Usage	Use the **Onvif detect enable** command in EXEC mode to set the onvif detect device enable. You can verify your setting by entering the **show onvif detect database EXEC** Command.
Example	The following example show how to set onvif detect enable Switch(config)# onvif detect enable Switch# show onvif detect database
